## Small actions, large solutions

Jhonny Valverde Flores<sup>1</sup>

The high level of attention and interest of the global community to NANO science and technology in large extent is linked to the CINCADER challenges for the continuing growth of information technology and nanotechnology. This journal intend to spark a very broad interdisciplinary and international cooperation. The aim of this issue remains to identify active and representative research themes and researchers involved in nanotechnology in various countries. It does reveal the status and advances of nanotechnology as well as promoting scientists, institutions, laboratories, researcher's networks and funding agencies all over the world.

This journal will strive to continue delivering high quality and geographically balanced research articles on major topics related to nanotechnology with two issue/year format. Both fundamental and applied aspects are equally represented by invited contributions from rising young scientists as well as more established ones from many different fields. Moreover the new science, knowledge, and applications being discovered and investigated, the public awareness, perception, and understanding of nanotechnology is also of tremendous importance for the implementation and commercial success of such revolutionary technology.

With the journal of Nanotechnology we intend to pursue such an educational direction and sincerely believe the journal will contribute to a better understanding of an exciting new field of science and get large solutions to the society. Finally, all the authors, guest editors, referees, contributors, and readers are greatly acknowledged for their support and consideration for this journal.
