EXECUTIVE SUMMARY

The Virginia Institute of Marine Science (VIMS) has conducted a trawl survey dating back to 1955. Over the years methods and objectives have varied according to funding sources and state and/or federal mandates. The present thrust of the program is to provide juvenile indices of relative abundance for recreationally, commercially, and ecologically important fish and invertebrates. These measures of juvenile abundance are widely used as a key element in the management of the Atlantic States' coastal fishery resources. Estimates of juveniles (age-0) have proven to be a reliable and early indicator of future year-class strength. A review of previously available indices of juvenile abundance for important fishery resource species of the Chesapeake Bay by the Chesapeake Bay Stock Assessment Committee (CBSAC), a federal/state committee sponsored and funded by the National Oceanic and Atmospheric Administration (NOAA), resulted in the recommendation that, "a unified, consistent trawl program should be one of the primary monitoring tools for finfish and crab stock assessment." (Chesapeake Bay Program Stock Assessment Plan, Chesapeake Executive Council 1988).

Several comments should be noted for the 1998 sampling year. In May, mega-invertebrates ($\geq 5\text{mm}$) began to be sampled. For most species only presence was noted at each trawl location. For selected species, counts were also collected. Habitat data began to be recorded in May as well. Categories were selected based on samples obtained in the trawl or attached to the tickler chain. Habitat types include: sponge, hydroids, sea squirts, submerged aquatic vegetation, shell, etc. These habitats were categorized for each sample based on volume. In July, sampling began on some of the smaller secondary water systems. The Pocomoke Sound, Mobjack Bay, and Piankatank River were sampled on only a limited basis over the past 40 years. The Great Wicomico River had never been sampled by the program. Information from these water systems should help better understand species distribution and essential habitat for target species. Species with marked increases in catch rates included spadefish and Atlantic croaker. Species with decreasing catch rates included scup, spot, and blue crabs. The program suffered a setback in August when the engine of the research platform, *R/V Fish Hawk*, failed. The vessel could not be repaired in time and a portion of the Rappahannock River and the entire Chesapeake Bay were not sampled. This marked the first time in over 15 years the survey was not, or could not, be completed as scheduled.

The purpose of this summary is to provide an accurate account of trawl survey sampling performed during the calendar year 1998. Previous volumes of this series have served as excellent reference guides to resource managers, scientists, academics, as well as the general public. Since there are other venues which presently detail specific results of these data (Geer and Austin, 1998), conclusions are kept at a minimum in order to provide the most information in the available space. Additional information can be obtained from the VIMS Department of Fisheries Science Web site located at www.fisheries.vims.edu. Information from several programs can be found at this site. On-line reports such as this volume can be found at www.fisheries.vims.edu/trawlseine/trawlreports.

ACKNOWLEDGMENTS

The author thanks the many individuals who have participated in the field collections, often under difficult and arduous circumstances. This includes scientists, technical support staff, and graduate research assistants, with the core staff listed below.

The author acknowledges federal and state agencies who provided financial support: Wallop Breaux and U.S. Fish and Wildlife Service Sportfish Restoration Project F104 (through the Virginia Marine Resources Commission). This report is part of a continuing effort to summarize data collected annually by the VIMS trawl survey.

INTRODUCTION

This report summarizes data collected by the Virginia Institute of Marine Science (VIMS) monthly trawl survey cruises for January to December 1998. The trawl survey is a long-term, broad scope monitoring program. Its primary goal is to monitor juvenile abundance for marine and estuarine finfish and invertebrates. A major objective is to provide annual indices of juvenile abundance for recreationally, commercially, and ecologically important species of sufficient accuracy and precision for both immediate resource management needs and long-term understanding of environmental influences on fishery resources. A second important product of this effort is the documentation and monitoring of habitat utilization by juveniles and small adults of these species. The program also provides a sound framework for the procurement of biological samples for life history studies and other investigations relevant to fisheries resource management.

VIMS has conducted a bottom trawl survey of some fashion since 1955 (Figure 1). Historically, sampling has occurred as mid-channel transects at fixed locations (non-random) spaced at approximately five mile intervals on Virginia's major tributaries (James, York and Rappahannock Rivers). In the early 1970's, work was performed on the Mobjack Bay and Piankatank River using both the standard fishing gear from a large research platform, and a similar but smaller gear towed from an outboard skiff or Chesapeake dead-rise at shallow water locations (≤ 12 ft.). The first random sampling design was implemented in 1971 on the York River by Linda Pushee Mercer as part of a pipefish study. This survey, and the increasing need for a random survey of the main stem Bay and tributaries, were factors in implementing a bay wide random stratified survey in 1973. This program had a very large spatial coverage in various depth strata, but was very limited in its temporal component. Sampling occurred on a semi-annual basis primarily in January to February, and again in July (Wojcik and Van Engel, 1988a, 1988b, 1988c, and 1989). A statistical review of accumulated trawl data indicated the monthly surveys did not provide enough samples to obtain the desired margin of error (300-700 trawls per survey necessary). This random survey was discontinued by May 1981, due to decreasing funding and the recognition that many species use the estuary as nursery grounds in various temporal manners which directly conflicted with the semi-annual design. Subsequently, the program returned to the small, monthly, fixed station transect design. These monthly river transects continued unabated until 1988, when the Chesapeake Bay Stock Assessment Committee (CBSAC) encouraged and directly supported pilot studies to develop a comprehensive Bay-wide trawl survey. In Virginia this support was the initiation of a random stratified monthly trawl survey of the lower Chesapeake Bay in January 1988 (Chittenden, 1989). It was hoped this survey would produce similar surveys of Virginia's major tributaries, the James, York, and Rappahannock Rivers. With this in mind, a pilot survey similar in design was established and implemented for the York River, beginning in October 1989. This work was performed independent of, and with a different vessel and smaller fishing gear than the primary sampling of the Bay and tributaries (Land et al. 1996a). With the purchase of the solely dedicated trawler R/V *Fish Hawk*, this random survey of the York was incorporated and sampled along with the historic fixed stations (June 1991). In September 1995, a similar survey was designed and implemented for the Rappahannock River, with the James River initiated in March of 1996.

The Virginia-wide random stratified design (RSD) survey continued in 1998 with historical fixed mid-channel stations on the tributaries incorporated into the design. For each tributary, 22 stations were sampled monthly (James: 14 random, 8 fixed; York: 13 random, 9 fixed; and Rappahannock: 14 random, 8 fixed), with monthly sampling in the Bay either 39 stations (cold water months) or 45 stations (warm water months). Additionally, the furthest upriver stations which previously were only sampled during cold water months (December to April) were sampled on a continuous monthly basis. After completing the March 1997 survey, the engine of the fishing platform R/V *Fish Hawk* was upgraded from a 210 horsepower diesel to a similar make and model 310 HP turbo-diesel. Examination of mean tow distances prior to, and after the engine modification indicated no significant difference (Hata 1997, *Attachment in Geer and Austin 1997*).

In May of 1998, two new types of data began being collected. Substrate or habitat type included a description of bottom structures which can act as habitat for various organisms. The presence of items such as sand, mud, shell, sponges, hydroids, sea squirts, etc., all may effect fish distributions. Data were collected based on items in the net or on the tickler chain and roughly categorized based on abundance. Estimates were made using a commercial nest tote (internal dimensions 25.7"x16.7"x10", approximately 18 gallons), relative to the capacity of the tote (bin) (0.1 trace, 1 = ¼ bin, 2 = ½ bin, etc.) Table 1 indicates the substrate categories.

The second type of new information being collected includes the presence/absence of all mega-invertebrates ($\geq 5\text{mm}$). Since many invertebrates are food sources for the various fish species captured in the trawls, this information may assist in explaining fish distribution and abundance by examining the forage species available. A protocol has been established to either process a species by taking lengths, recording total numbers, or simply noting the presence of a species in a given sample. Appendix A indicates all the species captured in 1998 and their sampling status.

In the beginning of the fiscal year (July 1998), additional sampling was established in several small secondary water systems of the Chesapeake Bay. Water bodies such as Mobjack Bay, Piankatank River, and Pocomoke Sound have been sparsely sampled by the program in the past (Mobjack 1970-73, Piankatank 1970-71, Pocomoke 1980-81). Areas such as the Great Wicomico River have never been sampled. A random stratified design was established for each water system, with additional fixed sites added based on historical sampling. The fixed sites were selected based on location and frequency of sampling in the past. Each system was sampled once per quarter (Great Wicomico and Piankatank Rivers in the same month). The sampling order was randomly selected when the surveys were first established, and rotated each quarter. The necessity for information on these systems became evident in the late summer of 1997, when concerns of pfiesteria complex organisms effected the Pocomoke and Great Wicomico Rivers. More importantly, the additional information from these systems will assist in our knowledge of essential fish habitat for important Chesapeake Bay fishes.

The following tables and figures include data for all finfish and mega-invertebrates ($\geq 5\text{mm}$) caught during 1998. The most commonly captured species of kingfish, southern kingfish (*Menticirrhus americanus*) and northern kingfish (*M. saxatilis*), have been difficult to identify in the

field at small sizes due to overlapping, and non-distinct, meristic characteristics. As a result, the decision was made to combine these species under one heading (kingfish, *Menticirrhus* sp.) until further identification protocol can be examined. There are four classifications of blue crabs (*Callinectes sapidus*) that appear in the tables, (males, juvenile females, adult females, and unclassified, or sex unknown). Each is provided its own species code in the databases and appear in the tables as separate species. The "unclassified" category is usually reserved for small crabs (< 20mm) or when subsampling is necessary. Other data are also presented showing station locations, and atmospheric and hydrographic data collected at each station. The figures include all data collected during the 1998 sampling season.

METHODS

All sampling was performed aboard the research vessel *Fish Hawk*. The sampling gear was a 30 ft (9.144m) semi-balloon otter trawl (Marinovich Gulf Shrimp Trawl) with a 1½ inch (38.1mm) stretch mesh body, a ¼ inch (6.35mm) mesh cod end liner, attached tickler chain, 60 ft (18.29m) bridle length, and a 3:1 warp, using steel china-v doors (28 x 19 inches, 71 x 48 cm). The tow duration was typically five minutes bottom time at a speed of approximately 2½ knots (1.29m/sec). A sample day was defined as the period between sunrise and sunset.

At each station, station identification, beginning and ending latitude and longitude, depth, tidal current stage, secchi depth, tow direction (upstream vs. downstream and relative to current), beginning and ending time, tow duration, scope, net number, speed over ground, air temperature, wind direction, wind speed, weather conditions, and sea state were recorded. Surface and bottom hydrographic data (temperature, salinity and dissolved oxygen), were recorded immediately following the tow at a depth consistent with that of the trawling depth. Onboard processing of catches involved separating them according to species, and measuring individual lengths (to the nearest millimeter). For fish species, all lengths were taken as fork lengths unless no fork was present for a given species, in which case total length was measured. Invertebrates were separated and the appropriate information collected. Information for those species in which just presence or total counts were collected were placed on datasheets. For blue crabs, point-to-point carapace width was measured (called long carapace width) and fecundity of adult females was assessed with individual egg stage being determined. The penaeid shrimp were measured for total length while the squid species were measured for mantle length. Jellyfish (gelatinous zooplankton) were estimated by volume in liters and are reported in this report as such. Other selected invertebrates were measured by the appropriate meristic characteristic. These data were entered directly into computer files using electronic measuring boards. Fish species with any anomalies (lesions, fin rot, open sores) were recorded with the individual's length. Subsampling was performed when large homogeneous catches of a species were made. On these occasions, a subsampling protocol was followed with enumeration of the discarded sample taking priority over subsampling by volume. When subsampling was performed by volume, the total weights of the discarded sample and of the subsample were taken and the individual fish in the subsample were enumerated and measured. Average weight per fish was then estimated from the subsample (total subsample weight ÷ total subsample number). Number of fish in the discarded catch was estimated by dividing total discarded

weight by calculating average weight. Station, environmental, habitat type, and selected invertebrate data were recorded first on paper and later transferred to the computer database. A sample data sheet appears in Appendix B.

SAMPLING DESIGN

Chesapeake Bay

The random stratified sampling design of the main stem bay is based on latitude and water depth. The Bay is latitudinally divided into four 15 minute blocks (regions) labeled bottom (below 37°10'N), lower (37°10'-37°25'N), upper (37°25'-37°40'N), and top (above 37°40'N). Within each region, depth strata were defined as eastern shore shallow areas (4-12 ft), eastern shore shoal areas (12-30 ft), western shore shallow areas (4-12 ft), western shore shoal areas (12-30 ft), plain areas (30-42 ft), and deep areas (\geq 42 ft), resulting in a total of 24 strata. A map of these strata and the accompanying tributary strata appears in Appendix C. The northernmost portion of Virginia's waters (i.e. Top Bay) has not been sampled since 1988 because of funding and logistic constraints.

Station selection for each cruise was made randomly through use of the National Ocean Survey's Chesapeake Bay bathymetric grid system computerized files. This system contains position and depth records at ¼ mile intervals, approximately the same value as the average tow length. Four stations were selected monthly in each central plain strata and three stations from each deep strata. During warm water months (May through November) three stations were sampled in each shoal strata; during cold water months (January through April, and December) only two shoal stations were sampled per strata. One station is sampled monthly in each of the six shallow water strata.

Previous cruises have indicated few individuals of targeted species occupy the main stem Chesapeake Bay during winter months. With this in mind, a combined January/February survey was conducted for the bay in both 1992 and 1993, in order to better allocate sampling resources. Further investigation indicated no significant difference in abundance for several key species during the months of January through March (Geer, unpublished). As a result, a single bay survey in February was conducted beginning in 1994 to represent the period January through March.

Major Tributaries

The tributaries have historically been sampled with fixed mid-channel river transects, with stations designated at approximate 5-mile intervals from the river mouths to the freshwater interface. Generally one tow was made at each station each month. A second tow, opposite in direction, which had been made at selected *blue crab index stations* during the warm water months (May through November), was discontinued in June 1995. Analysis revealed no significant difference in catch in regards to tow direction up versus down river (Bonzek, unpublished), and sampling effort could be better utilized with the random stratified surveys. Prior to 1997, during the cold water months, additional stations were occupied upstream to extend the range of the survey, enabling better monitoring of some anadromous species. Sampling of these sites was expanded to include all

months beginning in 1997. These historic fixed sampling sites will continue to be monitored along with the RSD, with each site assigned the appropriate strata based on its depth and location.

The random stratified surveys were initiated in 1989 on the York River using a smaller vessel and a 22 ft version of the present gear. It was discontinued in August 1990, and re-established in June 1991 in parallel with the fixed station transects aboard the R/V *Fish Hawk*, with the standard 30ft fishing gear. In September 1995, a similar survey was implemented on the Rappahannock, with a James River survey following in March 1996. Each river is divided into four regions (bottom, lower, upper, and top) of approximately ten miles each. Within each region there are four depth strata (4-12 ft, 12-30ft, 30-42ft and ≥ 42 ft), inclusive of the lower value. In areas where certain depths were minimal, strata were collapsed to provide adequate coverage. In the York River system, the top region (Pamunkey River) is not sampled with random stations due to its homogenous water depth, limited area, and the fact the three fixed locations can provided the necessary information for the area. The York has 13 random and 9 fixed stations in 11 strata; the Rappahannock has 14 random and 8 fixed stations in 13 strata; and the James River has 14 random and 8 fixed stations in 12 strata. Reports for the York River random survey have been prepared for the years prior to 1995 (Land et al., 1996a, and Land et al., 1996b), with the York and Rappahannock surveys appearing in Geer and Austin, 1996a). Appendix D provides a description of each stratum.

Secondary Water Systems

The secondary water systems of the Mobjack Bay, Pocomoke Sound, Piankatank and Great Wicomico Rivers were sampled on a quarterly basis beginning in July 1998. The design was similar to the major tributaries with historic fixed sites incorporated into a random stratified survey. One system was sampled per month (Piankatank and Great Wicomico Rivers sampled in the same month). The sampling order was randomly selected when the surveys were first established, and rotated each quarter, ie., Jul-Sep (1,2,3), Oct-Dec (2,3,1), Jan-Mar (3,1,2), Apr-Jun (1,2,3). If, after a period of time, it becomes apparent a system represents target species best during certain months, then sampling may be revised to target those systems and time frames. Strata for these systems is shown in Appendix D.

RESULTS

Catch data in this report represent total numbers caught. The average weights were removed from these reports beginning in 1994 because, in most cases, weights were not typically taken in the field except for subsampling purposes or for unusually large specimens. Weights taken on individual specimens are not usually representative of the catch and are thus biased, prompting the removal of that information from the report. For some species, representative samples were brought back to the laboratory in order to establish accurate weight estimates and length-weight relationships. The effort to establish length-weight relationships will continue to be expanded in the future so that biomass estimates of the trawl catch can be presented along with abundance estimates. A new variable has been added to this report to indicate the frequency of occurrence. This variable is particularly useful for the invertebrate species in which only presence is recorded, however, it is

equally important in indicating how common a species is found in trawl samples.

Table 1 shows the codes used for the various station, hydrographic, atmospheric, and habitat parameters. The corresponding station information is located in Tables 2-13 (major tributaries and secondary water systems) and Tables 14-25 (Chesapeake Bay). The hydrographic and atmospheric data for the tributaries and secondary water systems are found in Tables 26-37, with the Bay in Tables 38-49.

Catch, catch per unit effort (CPUE), and length statistics for data pooled from all sampling for the entire year are given in Table 50. Data for the tributaries and secondary water systems only, by river, pooled over months is presented in Tables 51-58. Likewise, data for the Chesapeake Bay survey only, by segment, pooled by months is shown in Tables 59-62. Tables 63-119 contain analogous data summaries by month and river for the tributary and secondary surveys, with Tables 120-161 by month and segment for the Chesapeake Bay surveys.

Comments are often necessary to convey concerns, note unique occurrences, and provide general information about a particular sample. These comments are often written on data sheets then transferred to the database. They provide insight into observations which may be of interest. Comment information are provide in Tables 162-173. No attempt has been made to correct grammatical mistakes within these comments, they are presented as a means of clarifying observations of concern.

Figures 2-13 show the locations of stations occupied each month in 1998, with Figure 14 showing relative position of the fixed mid-channel stations. Figures 15-49 geographically illustrate catch by month for the predominant species (the 18 most abundant finfish species - historically, four categories of blue crabs, plus other species of interest, arranged alphabetically) over the entire sampling area. These illustrations provide a helpful synopsis for showing temporal and geographic distribution of these species. With the additional sampling taking place in the tributaries and secondary water systems it was necessary to remove zero catch values to clarify the maps. As a result, the data shown represents only where and when specimens were captured. This is a change from volumes prior to 1997. Figures 50-84 provide monthly length-frequency summaries for the above selected species. These graphs and accompanying statistics are useful in separating young-of-year from older fish since the age of each fish is not taken. Calendar year is not the optimal way to present such data for species that spawn late in the year, however the figures are presented this way for convenience and consistency. All data collected in 1998 are presented in these figures.

The appendices at the end of this volume provide additional background into the methods and operations of this program. Appendix A provides common and scientific names of all species captured in 1998 along with the standard sampling protocol for each species. Appendix B shows a sample data sheet from the Chesapeake Bay in October 1998, along with the associated invertebrate and habitat data sheets for the particular day of sampling. Appendix C displays the survey's depth strata and associated geographic regions for the Chesapeake Bay and its tributaries. Appendix D describes the strata for the random stratified design surveys.

Observations on the 1998 Sampling Season

One of the biggest concerns for the program in 1998 was the engine failure of the R/V *Fish Hawk*, which caused the program to not complete a monthly survey for the first time since 1987. The vessel's engine failed on August 11th, and could not be repaired in time to complete the August sampling. As a result, the entire main-stem Bay, and 15 stations on the Rappahannock River were not sampled. When it became evident the *Fish Hawk* would not be ready in time, a decision was made to cancel the August survey in lieu of using a vessel with unknown fishing power, which would require lengthy vessel comparison studies .

The addition of the invertebrate sampling in May had immediate results, with the discovery of an introduced species, the veined rapa whelk (*Rapana venosa*, Valenciennes, 1846). The veined rapa whelk is indigenous to the Sea of Japan and was been introduced to the Black Sea in the 1940's via ships ballast water (Drapkin, 1953). On June 5th, two specimens were captured in independent samples on the James River in the vicinity west of the Monitor-Merrimac Bridge Tunnel (Interstate 664) (general location 36°56.48' 76°24.86') (Figure 85). On August 24th, scientists from VIMS and the Smithsonian Institute sampled the area of the first observations. Although no samples of *R. venosa* were collected in three dredge a eight trawl samples, three of the trawl samples produced viable egg cases of *R. venosa* (positively identified by Y. Kantor of the Russian Academy of Science). Since then a reward program for the whelks has been established and over 600 specimens have been reported by patent tongers, crab dredgers, other commercial fishermen, as well as the general public (*Daily Press Newspaper*, 1/1/99). The impact of *R. venosa* on the hard clam, *Mercenaria mercenaria*, and the already diminished American oyster (*Crassostrea virginica*) populations of the James River is of major concern. Several research projects are underway in the VIMS' Molluscan Ecology group (www.vims.edu/fish/oyreef/rapven.html) to study this introduced species and its effect on naturally occurring shellfish species.

There was a marked increase in the number of species captured in 1998, primarily due to the sampling of mega-invertebrates. Since 1988, an average of nearly 105 species were captured annually. With the addition of invertebrates in 1998, that number rose to 140. The number of species may be higher in 1999 since invertebrate sampling did not begin until May. The number of Atlantic sturgeon rose from 3 in 1997 to 8 in 1998 (CPUE of 0.006 in 1998, 0.002 in 1997). Other species showing marked increased catch rates include Atlantic croaker and spadefish. Species such as scup, spot, and blue crabs continue to be at low levels. Some species, such as northern puffer, oyster toadfish, and smallmouth flounder have shown declining catch rates nearly every year since 1988.

DISCUSSION

The purpose of this report is to present a quick visual summary of the data collected during the 1998 VIMS trawl survey. A more analytical review of these data for target species for 1979-1995 is presented by Geer and Austin , 1998.

With a Virginia-wide random stratified design (RSD) survey of the Bay and tributaries fully established, the program can provide better statistical results for species of concern. The fixed transect sampling has provided a historical perspective for over forty years, and will continue to do so as part of the present RSD. The results from these surveys are already providing dividends: catching target species over a broader temporal scale than the fixed station transects; providing first-time observations for several species; and indications to size variations based on depth and/or strata (Geer and Austin, 1996a). With several long-term goals completed, the program is setting new goals for the future. These include an extensive evaluation of historical data, to correct possible erroneous values, examining data of similar studies for inclusion into the database, and using these historical values as a way to judge present sampling. Additionally, these data are available on-line under the program's 'home page' (www.fisheries.vims.edu/trawlseine/mainpage.htm). Conversion factors for gear and vessel have been provisionally applied to these data to standardize catch rates for all survey years back to 1955 (Geer and Austin 1998). These results will provide a longer reliable time series of juvenile abundance. The addition of habitat data allows the program to explore essential fish habitat for various life stages, while the records of invertebrate species will further enhance the knowledge of the trophic interactions taking place in the Chesapeake Bay.

TABLES

Table 1. VIMS codes for selected parameters as used in the trawl survey database. These same codes appear in several of the included tables and figures.

TOWDIR 1: Tow Direction, up or down stream

- 1: Upstream
- 2: Downstream
- 3: Slack

TOWDIR2: Tow Direction, relative to current

- 1: With
- 2: Against
- 3: Perpendicular
- 4: Oblique with
- 5: Oblique against
- 6: Slack

TIDE: Tidal stage

- 1: Early flood
- 2: Maximum flood
- 3: Late flood
- 4: Slack before ebb
- 5: Early ebb
- 6: Maximum ebb
- 7: Late ebb
- 8: Slack before flood

SEASTATE

- 0: Calm-glassy 0m
- 1: Calm-rippled 0-0.1m
- 2: Smooth-wavelets 0.1-0.5m
- 3: Slight 0.5-1.25m
- 4: Moderate 1.25-2.5m
- 5: Rough 2.5-4m
- 6: Very rough 4-6m
- 7: High 6-9m
- 8: Very high 9-14m
- 9: Phenomenal >14m

WEATHER: Observed weather

- 1: Clear-no cloud at any level
- 2: Partly cloudy-scattered or broken
- 3: Overcast
- 4: Sand, dust storm, or blowing snow
- 5: Fog-thick, dust, or haze
- 5: Drizzle
- 6: Rain
- 7: Snow-rain and snow mix
- 8: Showers
- 9: Thunderstorms

STRATUM: Geographic stratum

Chesapeake Bay

- 1: Bottom Western Shore; 12-30 ft
- 2: Bottom Eastern Shore; 12-30 ft
- 3: Bottom Plain; 30-42 ft
- 4: Bottom Deep; ≥ 42 ft
- S1: Bottom Western Shallow; 4-12 ft
- S2: Bottom Eastern Shallow; 4-12 ft
- 5: Lower Western Shore; 12-30 ft
- 6: Lower Eastern Shore; 12-30 ft
- 7: Lower Plain; 30-42 ft
- 8: Lower Deep; ≥ 42 ft
- S5: Lower Western Shallow; 4-12 ft
- S6: Lower Eastern Shallow; 4-12 ft
- 9: Upper Western Shore; 12-30 ft
- 10: Upper Eastern Shore; 12-30 ft
- 11: Upper Plain; 30-42 ft
- 12: Upper Deep; ≥ 42 ft
- S9: Upper Western Shallow 4-12 ft
- S10: Upper Eastern Shallow 4-12 ft

York R.

- 30: Bottom; 4-12 ft
- 31: Bottom; 12-30 ft
- 32: Bottom; 30-42 ft
- 33: Bot. & Lower; ≥ 42 ft
- 34: Lower; 4-12 ft
- 35: Lower; 12-30 ft
- 36: Lower; 30-42 ft
- 37: Upper & Top; 4-12 ft
- 38: Upper; 12-30 ft
- 39: Upper & Top; ≥ 30 ft
- 40: Top; 12-30 ft

Rappahannock R.

- 50: Bottom; 4-12 ft
- 51: Bottom; 12-30 ft
- 52: Bottom; 30-42 ft
- 53: Bottom; ≥ 42 ft
- 54: Lower; 4-12 ft
- 55: Lower; 12-30 ft
- 56: Lower; 30-42 ft
- 57: Lower; ≥ 42 ft
- 58: Upper; 4-12 ft
- 59: Upper; 12-30 ft
- 60: Up. & Top; ≥ 30 ft
- 61: Top; 4-12 ft
- 62: Top; 12-30 ft

James R.

- 70: Bottom; 4-12 ft
- 71: Bottom; 12-30 ft
- 72: Bottom; 30-42 ft
- 73: Bot. & Lower; ≥ 42 ft
- 74: Lower; 4-12 ft
- 75: Lower; 12-30 ft
- 76: Lower; 30-42 ft
- 77: Upper; 4-12 ft
- 78: Upper; 12-30 ft
- 79: Upper & Top; ≥ 30 ft
- 80: Top; 4-12 ft
- 81: Top; 12-30 ft

Table 1. Continued.

Habitat Data

<u>Description</u>	<u>Code</u>
Sand (hard) bottom	SND
Mud (soft) bottom	MUD
Hydroids	HYD
Dead's man fingers	DMF
Sponges (yellow, orange, etc)	SPG
Sea squirts (<i>Mogula spp.</i>)	SQT
Shell bottom (oyster, clam, etc)	SHL
Submerged Aquatic Vegetation	SAV
Seaweeds (red, green, or brown)	SWD
Artificial	ART
Detritus	DET
Tube Worms	TUB
Undetermined	UNK

Abundance is estimated relative to the capacity of a commercial nest tote (internal dimensions 25.7"x16.7"x10", approximately 18 gallons). Categories include: 0.1 = trace, 1 = ¼ bin, 2 = ½ bin, 3 = ¾ bin, 4 = full bin, etc.

Tables 2-13. Station data for the tributaries (James, York, and Rappahannock Rivers) and the secondary water systems (Pocomoke Sound, Mobjack Bay, Piankatank and Great Wicomico Rivers) by month.

A. The secondary water systems are sampled once per quarter beginning in July, 1998.

Explanation: To conserve space, some variables are presented as coded values. Code keys are shown in Table 1. (p. 11).

Table 9. Survey not completed due to engine failure of research vessel.

August 1998

Tables 14-25. Station data for the Chesapeake Bay by month. The survey is not conducted in January and March.

Explanation: To conserve space, some variables are presented as coded values. Code keys are presented in Table 1 (p. 11).

Tables 26-37. Atmospheric and hydrographic data for the tributaries (James, York, and Rappahannock Rivers) and the secondary water systems (Pocomoke Sound, Mobjack Bay, Piankatank and Great Wicomico Rivers) by month.

Explanation:

- A. To conserve space, some variables are presented as coded values. Code keys are presented in Table 1 (p. 11).
- B. Due to measurement error (calibration differences and instrument drift) associated with the hydrographic equipment used to measure temperature, salinity and dissolved oxygen, some calculated saturations presented here are greater than 100%.
- C. The secondary water systems are sampled once per quarter beginning in July, 1998.

Tables 38-49. Atmospheric and hydrographic data for the Chesapeake Bay by month. The survey is not performed in January or March.

Explanation: A. To conserve space, some variables are presented as coded values. Code keys are presented in Table 1 (p. 11).

B. Due to measurement error (calibration differences and instrument drift) associated with the hydrographic equipment used to measure temperature, salinity and dissolved oxygen, some calculated saturations presented here are greater than 100%.

Table 50. Species composition, number caught, catch per trawl, and length statistics for all months, all areas, and all water systems.

- A. The 'Number of Species' notation in the table header includes each of four categories of blue crabs (male, juvenile female, adult female, and unclassified) as unique species.
- B. Catch per trawl for species other than blue crabs is based on the value 'Number of Fish Trawls Made' while the catch per trawl for blue crabs is based on the sum of 'Number of Fish Trawls made' and 'Number of Additional Crab Trawls Made'.
- C. 'Adjusted Percent of Catch' excludes bay anchovy and hogchoker due to the low biomass estimates in relation to total number of fish caught.
- D. 'Frequency' is the number of samples in which a species was captured.

Table 50.

Table 51-58. Species composition, number caught, catch per trawl, and length statistics for **all months, by river** for the tributary surveys of the James, Rappahannock, and York Rivers, and the secondary water systems of the Mobjack Bay, Pocomoke Sound, Piankatank and Great Wicomico Rivers.

- A. The 'Number of Species' notation in the table header includes each of four categories of blue crabs (male, juvenile female, adult female, and unclassified) as unique species.
- B. Catch per trawl for species other than blue crabs is based on the value 'Number of Fish Trawls Made' while the catch per trawl for blue crabs is based on the sum of 'Number of Fish Trawls made' and 'Number of Additional Crab Trawls Made'.
- C. 'Adjusted Percent of Catch' excludes bay anchovy and hogchoker due to the low biomass estimates in relation to total number of fish caught.
- D. 'Frequency' is the number of samples in which a species was captured.

All Species Combined	464,341									

Table 59-62. Species composition, number caught, catch per trawl, and length statistics for **all months**, **by geographic region** for the Chesapeake Bay surveys.

- A. The 'Number of Species' notation in the table header includes each of four categories of blue crabs (male, juvenile female, adult female, and unclassified) as unique species.
- B. Catch per trawl for species other than blue crabs is based on the value 'Number of Fish Trawls Made' while the catch per trawl for blue crabs is based on the sum of 'Number of Fish Trawls made' and 'Number of Additional Crab Trawls Made'.
- C. 'Adjusted Percent of Catch' excludes bay anchovy and hogchoker due to the low biomass estimates in relation to total number of fish caught.
- D. 'Frequency' is the number of samples in which a species was captured.

Table 59.

Month - All - Pooled, 1998

Segment - Ches. Bay - Bottom

No. of Random Trawls Made - 130

Table 63-119. Species composition, number caught, catch per trawl, and length statistics for by **month and river** for the tributary (James, York, and Rappahannock Rivers), and secondary water system (Pocomoke Sound, Mobjack Bay, Piankatank and Great Wicomico Rivers) surveys.

- A. The ‘Number of Species’ notation in the table header includes each of four categories of blue crabs (male, juvenile female, adult female, and unclassified) as unique species.
- B. Catch per trawl for species other than blue crabs is based on the value ‘Number of Fish Trawls Made’ while the catch per trawl for blue crabs is based on the sum of ‘Number of Fish Trawls made’ and ‘Number of Additional Crab Trawls Made’.
- C. ‘Adjusted Percent of Catch’ excludes bay anchovy and hogchoker due to the low biomass estimates in relation to total number of fish caught.
- D. ‘Frequency’ is the number of samples in which a species was captured.
- E. Tables pooled for all rivers for each month appear as follows:

January	Table 66	Page 89
February	Table 70	Page 92

Table 120-161. Species composition, number caught, catch per trawl, and length statistics for by **month and geographic segment** for the Chesapeake Bay trawl survey. No sampling was performed in January and March.

- A. The ‘Number of Species’ notation in the table header includes each of four categories of blue crabs (male, juvenile female, adult female, and unclassified) as unique species.
- B. Catch per trawl for species other than blue crabs is based on the value ‘Number of Fish Trawls Made’ while the catch per trawl for blue crabs is based on the sum of ‘Number of Fish Trawls made’ and ‘Number of Additional Crab Trawls Made’.
- C. ‘Adjusted Percent of Catch’ excludes bay anchovy and hogchoker due to the low biomass estimates in relation to total number of fish caught.
- D. ‘Frequency’ is the number of samples in which a species is captured.
- E. Tables pooled for all rivers for each month appear as follows:

January	N/A	Page n/a
February	Table 124	Page 138

Tables 162-173:

Station comments for the Chesapeake Bay, tributary, and secondary water systems sampling **by month**. Comments are used to note unusual circumstances, concerns which may have occurred, or other items of interest which cannot be placed in some pre-defined variable. No attempt has been made to correct grammatical mistakes.

- A. The 'Stat. # or River Mile' refers to the actual station number if a random station, or river and river mile if a fixed station. The 'Record Number' indicates a consecutive number of comments for a given station. Due to the limited variable length, many comments may be placed on more than one line (ie., multiple record numbers). Records pertaining to vessel speed over ground were removed since they are now incorporated into the database.

Table 162.
January 1998

System & Cruise No.	Stat# or River Mile	Record Number	Comment
JA980112	2	1	CAUGHT A LOT OF BLUEBACKS (800 PLUS) .
JA980112	4	1	CAUGHT TWO POLES .
JA980112	5	1	AVERAGED DEPTH STARTED 47 FEET TO 35 FEET. .
JA980112	7	1	BROKE TICKLER CHAIN .
JA980112	19	1	NO ENDING LAT OR LONGS FOR THIS STATION .
JA980112	19	2	THIS STATION WAS A RETOW AND HAD TO AVERAGED SCOPE 130-155 FT. .
JA980112	19	3	FIRST TOW HUNG AT 4:00 MINUTES .
JA980113	20	1	HAD TO AVERAGED BOTH DEPTH AND SCOPE. DEPTH STARTED OUT 36 DOWN TO 32 .
JA980113	20	2	FEET. SCOPE STARTED AT 130 FT DOWN TO 110 FT. .
JA980113	21	1	THIS STATION WAS A RETOW. FIRST TOW HUNG ON BOTTOM .
JA980112	J01	1	THIS STATION WAS A RETOW. STATION DONE 3 TIMES .
RA980115	7	1	CRABPOT ON THE TICKLER CHAIN .
RA980115	9	1	CAUGHT A CRAB POT IN THE NET .
RA980114	14	1	NO VESSEL SPEED AND NO ENDING LAT AND/OR LONGS FOR THIS STATION .
RA980114	21	1	1 MENHADEN CAUGHT AT THIS STATION....NO LESION .
RA980114	R25	1	NO INDIVIDUAL MEASUREMENTS FOR SPECIES CODE 614, ONLY SUBSAMPLE .
RA980114	R25	2	NO INDIVIDUAL MEASUREMENTS FOR SPECIES CODE 103, ONLY SUBSAMPLE .
RA980114	R30	1	NO BEGINNING LAT OR LONG COLLECTED FOR THIS STATION .
RA980114	R35	1	NO INDIVIDUAL MEASUREMENTS FOR SPECIES CODE 103, ONLY SUBSAMPLE .
YK980109	8	1	CAUGHT A CRABPOT AT END OF TOW. .
YK980109	8	2	HICKORY SHAD (SPECIES CODE 28) WAS IDENTIFIED BACK AT LAB BY JIM GOINS .
YK980108	10	1	ONLY BOTTOM HYDRO COLLECTED FOR THIS STATION DUE TO DEPTH OF 6 FEET. .
YK980108	15	1	ONLY BOTTOM HYDRO COLLECTED FOR THIS STATION DUE TO DEPTH OF 5 FEET .
YK980108	16	1	ONLY BOTTOM HYDRO COLLECTED FOR THIS STATION DUE TO DEPTH OF 8 FEET. .
YK980108	20	1	BROKE TICKLER CHAIN AND CAUGHT A LOG IN THE NET .
YK980109	Y02	1	THIS STATION WAS A RETOW. .
YK980108	Y10	1	NO VESSEL SPEED RECORDED FOR THIS STATION .
YK980108	Y25	1	CAUGHT PART OF A CRAB POT IN NET .

Table 163.
February 1998

System & Cruise No.	Stat# or River Mile	Record Number	Comment
CL980202	4	1	THIS STATION WAS A RETOW .
CL980202	6	1	TWO VERY SMALL TONGUEFISH .
CL980202	9	1	NET WAY OFF TO STARBOARD SIDE .
CL980202	10	1	CANCER CRABS MEASURED .
CL980202	13	1	SPIDER CRABS TOTAL LENGTH .
CL980202	13	2	CATCH TOO BIG TO BOARD BOAT...RELEASED...TORE NET...REPLACED WITH A04 .
CL980202	14	1	WEATHER STATION NOT WORKING. SPIDER CRABS COUNTED (2 SPECIES) .
CL980202	14	2	SMALL SUMMER FLOUNDER. LOTS OF STARFISH ABOUT 200 (COUNTED)..
CL980202	14	3	LIMULUS AND SQUILLA .
CL980218	20	1	A FEW CRANGON .
CL980202	22	1	CAUGHT POLYONYX GIBBESI, PAGURUS SP., 2 SANDLANCES CAUGHT- ID IN LAB .
CL980202	22	2	AS AMMOCLYTES DUBIUS. D HATA .
CL980218	24	1	1 STARFISH .
CL980202	25	1	SQUILLA CAUGHT .
CL980210	28	1	AVERAGED DEPTH 41 TO 45 FT (USED 43.1 FEET AVG.) .
CL980218	29	1	750 CRANGON .
CL980218	30	1	1 STARFISH, 7200 CRANGON .
CL980210	35	1	AVERAGED DEPTH WENT FROM 20 TO 16 FEET (USED 18.6 AS THE AVG) .
CL980211	36	1	DOOR CAME UP FLIPPED .
CL980202	72	1	MOVED STATION TO GET CORRECT DEPTH.* .
CL980202	78	1	METAL PIPE ON CHAIN .
JA980209	17	1	AVERAGED SCOPE 50 TO 55 FT. 52.5 FT DEPTH .
JA980210	19	1	HIT SNAG 1:30 MIN INTO TOW, ANOTHER SNAG 3:00 INTO THE TOW .
JA980210	20	1	1:09 MIN INTO TOW BUMP....AVERAGED DEPTH 46 TO 51 FT (USED 48.5 FT) .
JA980209	J27	1	HEAVY RAIN LAST WEEK....ALL SALINITIES ARE LOW .
RA980212	9	1	DEPTH WAS AVERAGED STARTED IN 5 FEET 16, 10.9, 6.4, 7.2,.....(USED 11.4 .
RA980212	9	2	ONLY BOTTOM HYDRO DATA COLLECTED FOR THIS STATION DUE TO DEPTH OF 6 FT .
RA980213	14	1	THIS STATION WAS 3 TIMES. FIRST TOW NET RIPPED, SECOND TOW CAUGHT .
RA980213	14	2	POUND NET POLE. .
RA980213	14	3	AVERAGED BOTH DEPTH AND SCOPE (USED 42.0 FT FOR DEPTH AND 142.5 FOR .
RA980213	14	4	SCOPE) .
RA980213	16	1	AVERAGED DEPTH STARTED 53 FT TO 48.4 (USED 50.7 FEET) .
RA980212	21	1	HUNG 1 SECONDS OF TOW....THIS STATION WAS A RETOW .
RA980213	R10	1	VESSEL SPEED WAS NOT RECORDED FOR THIS STATION .
RA980213	R20	1	AVERAGED BOTH DEPTH AND SCOPE (USED 60.9 FOR DEPTH AND 192.5 FOR .
RA980213	R20	2	SCOPE) .
YK980203	3	1	CRABPOT ON THE TICKLER CHAIN .
YK980203	8	1	NO VESSEL SPEED DATA COLLECTED FOR THIS STATION .
YK980203	19	1	SPOT WERE CAUGHT AT THIS STATION .
YK980203	20	1	GLASS EEL/ELVER CAUGHT .
YK980203	20	2	EEL POT CAUGHT AT THIS STATION .
YK980203	Y15	1	CAUGHT SPOT AT THIS STATION .
YK980203	Y20	1	TICKLER CHAIN BROKE...2 1/2 MINUTES .

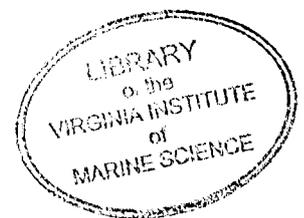

Table 164.

March 1998

System & Cruise No.	Stat# or River Mile	Record Number	Comment
JA980303	8	1	AVERAGED BOTH DEPTH AND SCOPE...50.4 FT (DEPTH) AND SCOPE 167.5. .
JA980304	12	1	THIS STATION WAS DONE 3 TIMES. FIRST AND SECOND TOW HUNG .
JA980304	12	2	THIRD TOW DONE 1/2 MILE FROM FIRST TOW .
JA980304	14	1	THIS STATION WAS A RETOW. TORE NET ON FIRST TOW .
JA980303	20	1	TICKLER CHAIN BROKE .
JA980303	J05	1	VESSEL SPEED WAS NOT RECORDED FOR THIS STATION .
JA980304	J13	1	AVERAGED SCOPE TO 135 FEET. 130-140 FT.... .
JA980304	J17	1	THIS STATION WAS A RETOW. CHAIN MESSED UP .
JA980303	J35	1	ONE CHANNEL CATFISH WITH A LESION .
JA980303	J40	1	CAUGHT A NET FULL OF CATFISH .
RA980306	1	1	THIS STATION...NO FISH CAUGHT .
RA980305	19	1	BUMP....15 SECONDS INTO TOW .
RA980305	R20	1	AVERAGED DEPTH TO 48 FEET. STARTED OUT IN 36 FT. AND ENDED WITH 60 FT .
RA980305	R25	1	TICKLER CHAIN BROKE .
YK980303	6	1	THIS STATION WAS A RETOW...TICKLER CHAIN BROKE. SNAGGED 45 SECONDS .
YK980303	6	2	INTO TOW. .
YK980302	7	1	SPOTTED HAKE WITH LESION .
YK980302	10	1	ONE TOADFISH WITH LESION 232MM .
YK980302	11	1	BROKE TICKLER CHAIN .
YK980302	13	1	CAUGHT ALOT OF CRABS .
YK980302	13	2	NO ENDING LAT OR LONGS RECORDED FOR THIS STATION .
YK980302	Y35	1	AVERAGED SCOPE 60 TO 70 FEET. USED 65 FT. .

Table 165.

April 1998

System & Cruise No.	Stat# or River Mile	Record Number	Comment
CL980406	4	1	NO ENDING LAT OR LONGS WRITTEN DOWN ON DATA SHEET .
CL980407	13	1	BROKE TICKLER CHAIN .
CL980407	14	1	WHITE HAKE CONFIRMED BY JACK MUSICK..BROUGHT BACK TO LAB. .
CL980402	18	1	DEPTH HAD TO BE AVERAGED WENT FROM 20 TO 25 FT .
CL980406	27	1	ENDING LAT/LONGS WERE WRITTEN DOWN INCORRECTLY. HAD TO DELETED. .
CL980406	27	2	DISTANCE LESS THAT 99 METERS .
CL980407	28	1	2 SMALL SUMMER FLOUNDER AROUND 150 MM .
CL980407	31	1	DOOR FLIPPED.... .
CL980402	47	1	5 GALLONS OF JELLIES .
CL980402	48	1	2 GALLONS OF JELLIES .
CL980407	65	1	STATION LOCATION SELECTED ARBITRARILY...TOO MANY CRAB POTS CAN NOT .
CL980407	65	2	GET RIGHT DEPTH.... ALSO BROKE TICKLER CHAIN .
CL980407	69	1	VESSEL SPEED WAS NOT RECORDED FOR THIS STATION .
CL980402	85	1	ONLY BOTTOM HYDRO DATA COLLECTED DUE TO DEPTH OF 6 FT .
JA980408	J17	1	THIS STATION WAS A RETOW. LOST NET (A01) ON THE BOTTOM OF THE JAMES .
JA980408	J17	2	RIVER. TAG LINE CAME UNTIED FROM NET .
RA980406	6	1	1 GALLON OF JELLIES .
RA980406	12	1	2 GALLONS OF JELLIES .
RA980403	14	1	THIS STATION WAS A RETOW .
RA980403	22	1	BACK UP STATION. COULD NOT FIND DEPTH AT ORIGINAL -PJG .
RA980403	22	2	BROKE TICKLER CHAIN .
RA980406	R02	1	NO SECCHI DATA COLLECTED FOR THIS STATION .
RA980406	R10	1	2 GALLONS OF JELLIES .
RA980403	R20	1	SCOPE WAS AVERAGED DUE TO DEPTH CHANGE 135FT TO 145 FT...USED 140FT .
RA980403	R30	1	DEPTH WAS NOT WRITTEN DOWN. USED DEPTH FROM THE MAP .
YK980401	6	1	NO ENDING LAT OR LONGSNO VESSEL SPEED RECORDED .
YK980401	7	1	NO VESSEL SPEED AND SECCHI DATA COLLECTED FOR THIS STATION .
YK980401	8	1	NO VESSEL SPEED RECORDED FOR THIS STATION .
YK980401	15	1	ONLY BOTTOM HYDRO DATA COLLECTED DUE TO DEPTH OF ONLY 4 FT. .
YK980401	15	2	BROKE TICKLER CHAIN .
YK980401	16	1	USED BACKUP STATION 16....BUMP WITH 1 MINUTE LEFT INTO TOW .
YK980401	19	1	3 DEAD OYSTER TOADS AND 6 DEAD CRABS .
YK980402	Y05	1	1 QUART OF JELLIES. SMALL CATCH....DOORS WERE SCRAPED, ASSUME NET .
YK980402	Y05	2	WAS ON THE BOTTOM .

FIGURES

VIMS Juvenile Fish Trawl Survey

Sampling Changes 1955 - 1999

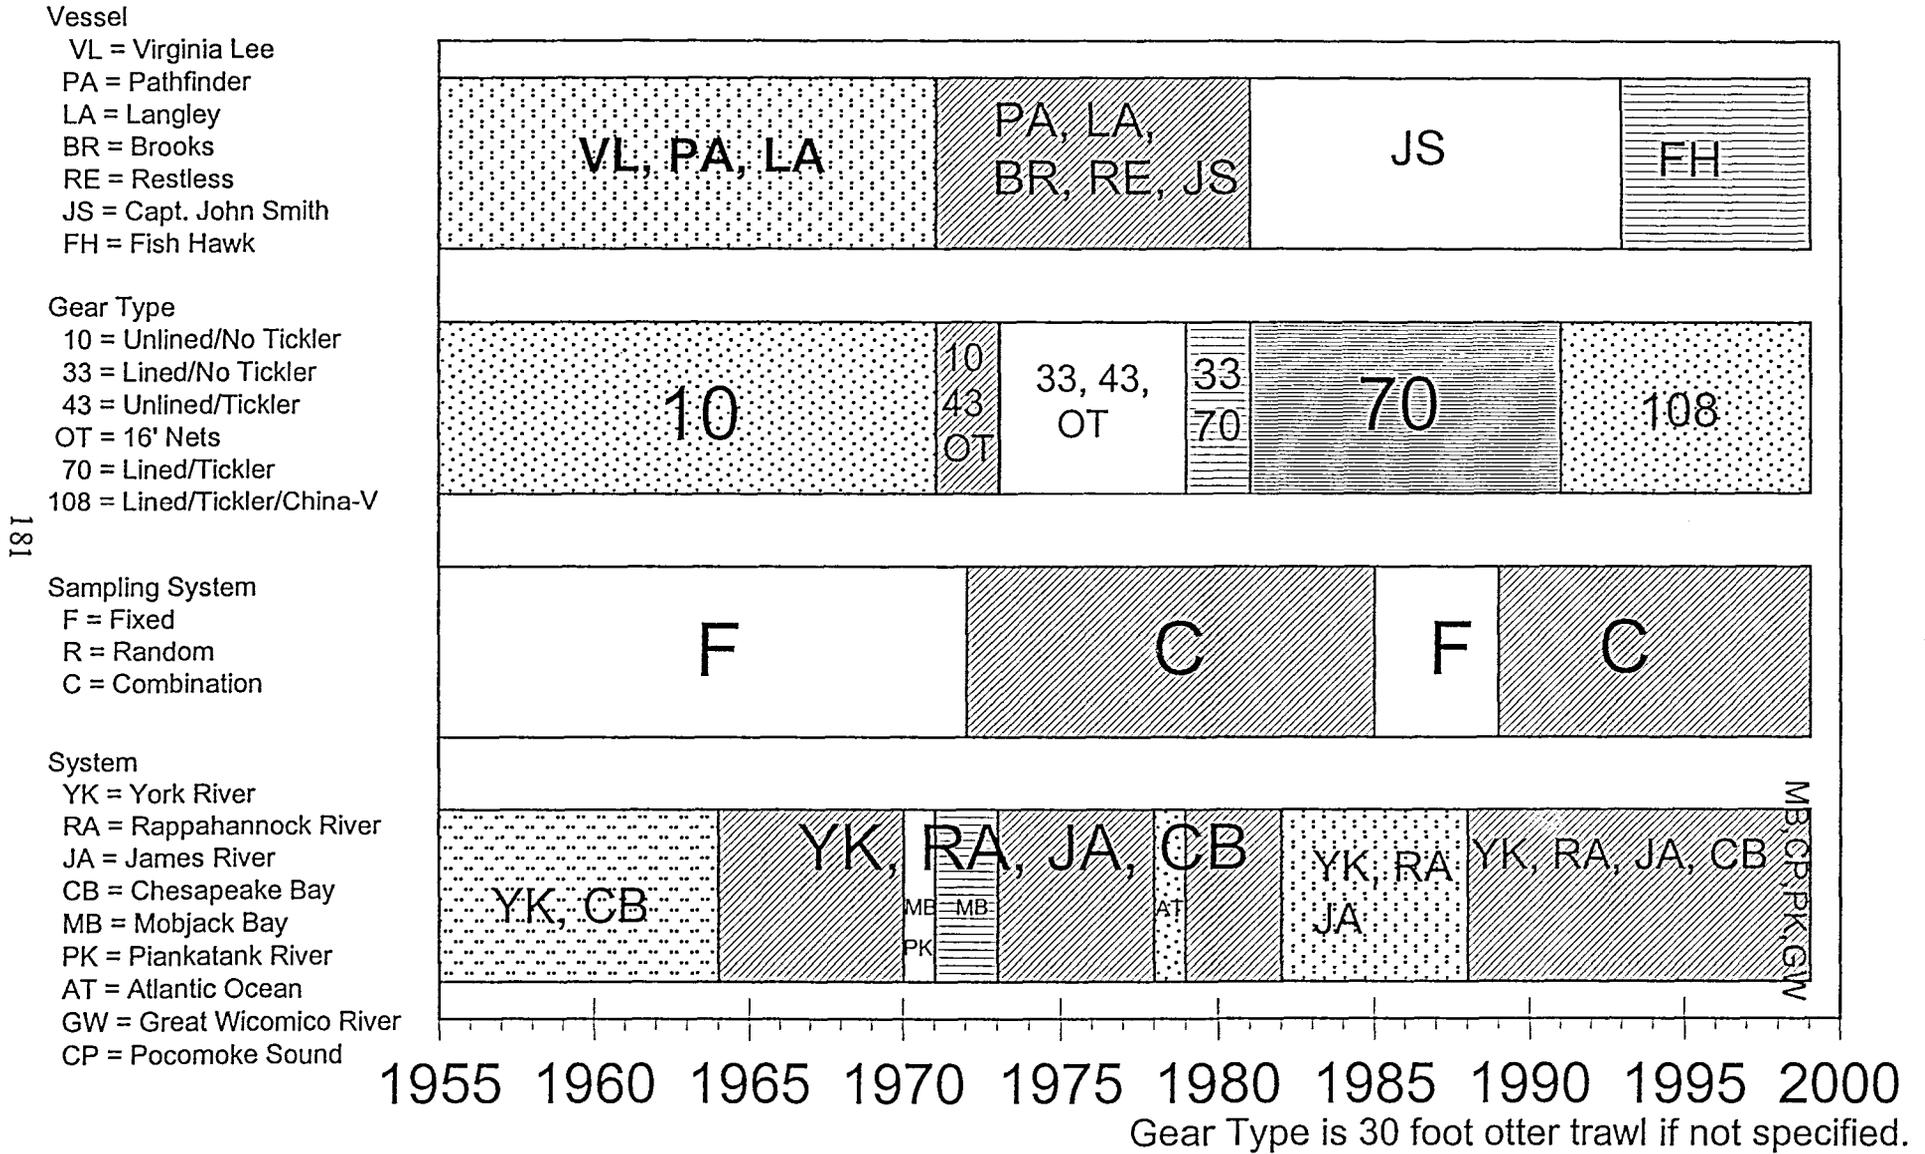

Figure 1. Sampling system, design, and gear changes for the VIMS trawl survey, 1955-1999.

THIS PAGE LEFT INTENTIONALLY BLANK

Figures 2-14 Stations sampled in 1998 by month.

- Notes: A. Due to LORAN distortion at upriver stations and to computer software control of the placement of figures on these maps, the locations shown may vary slightly from the actual stations occupied. For exact coordinates refer to Tables 2-13 (rivers) and 14-25 (bay).
- B. A single winter survey was conducted in February for the Chesapeake Bay to represent the period from January through March 1998.
- C. The Squares represent the non-random fixed locations. Figure 14 shows the relative position of these stations.

TRAWL SURVEY FIXED STATION LOCATIONS 1998

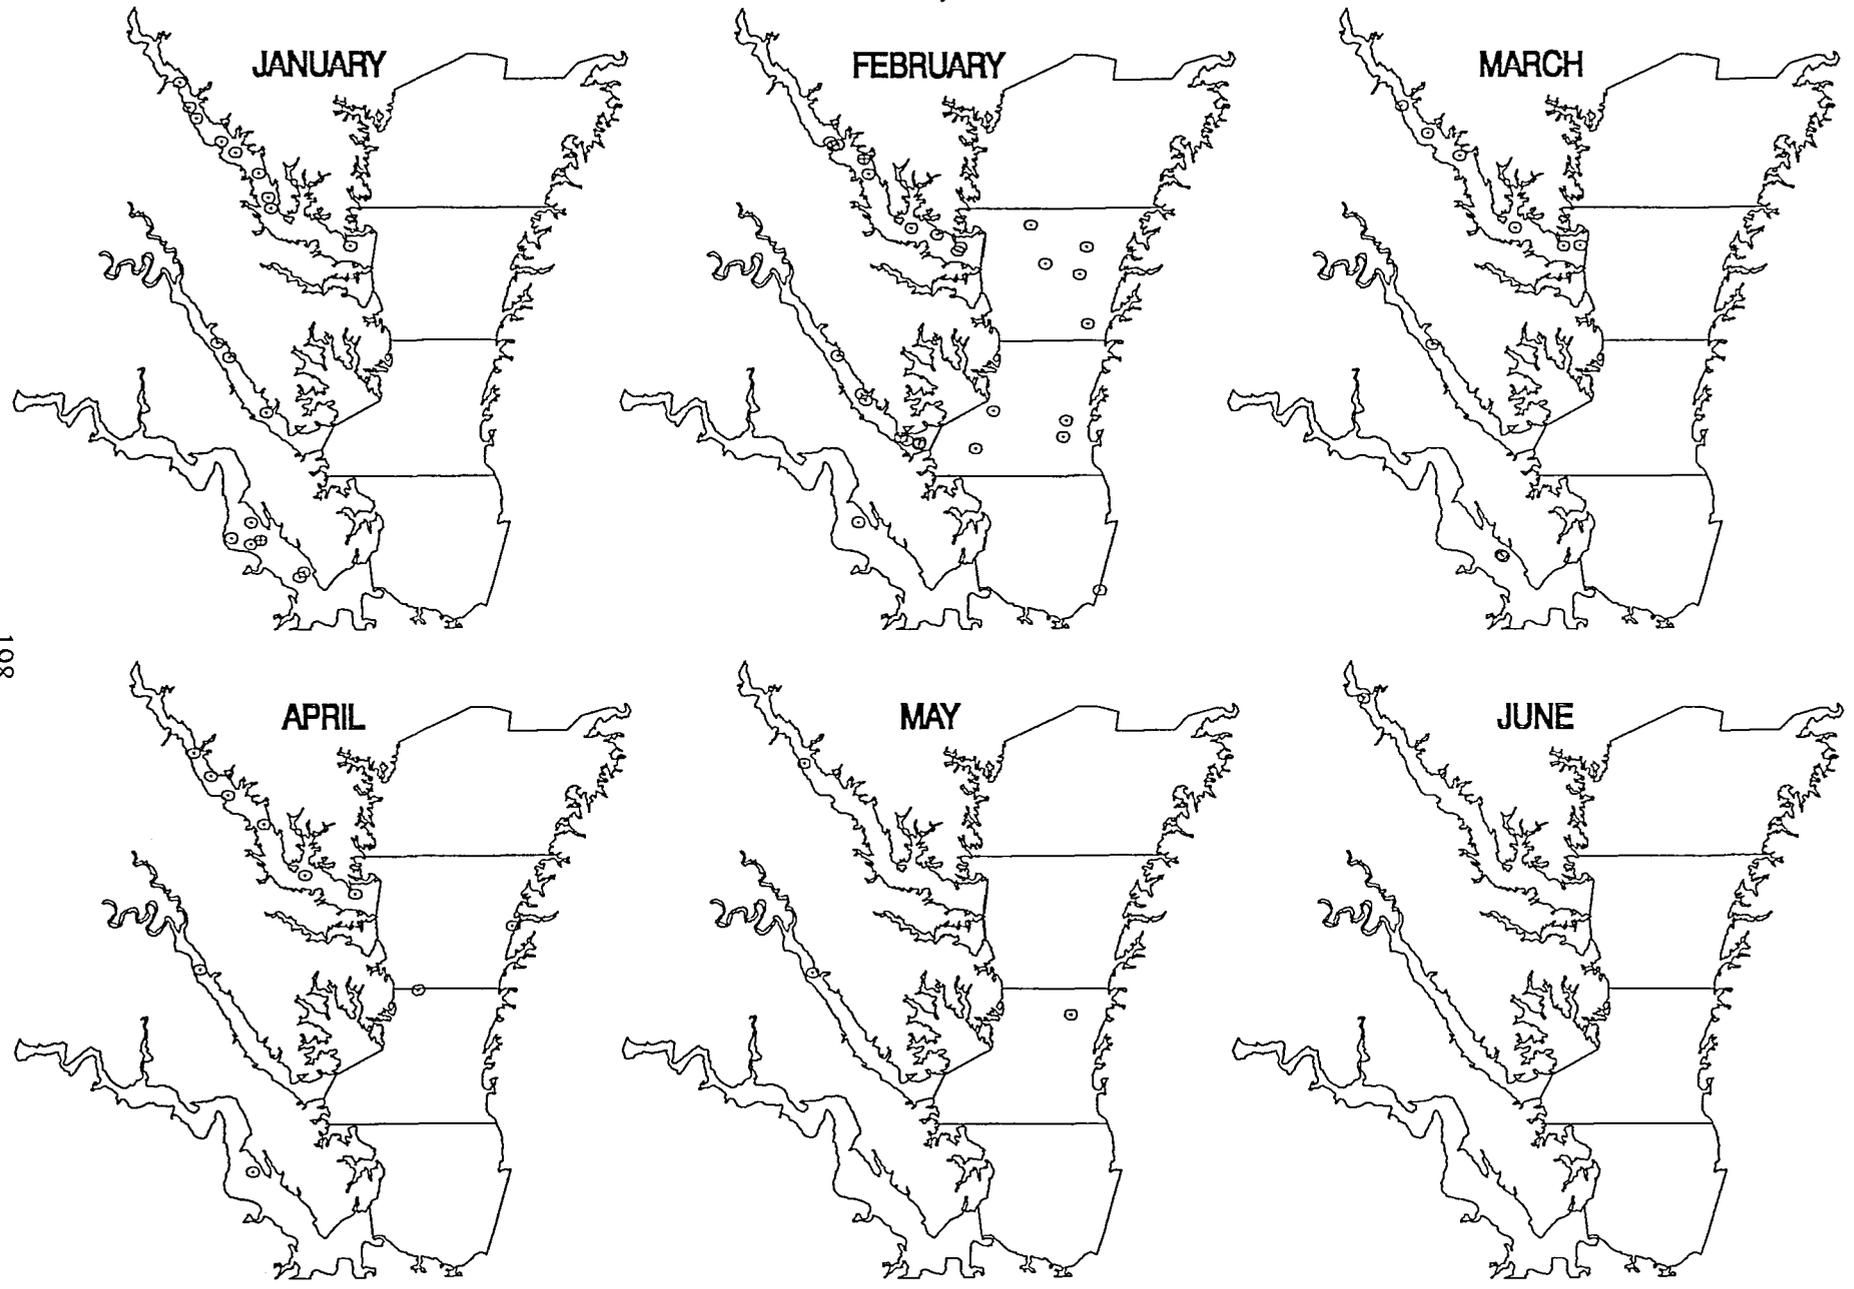

NOTE: Fixed Stations are Non-Random, Located at Selected River Miles, They are Sampled Each Month.

Figures 15-49. Geographic distribution, by month, of selected species. Density values represent total number of specimens caught.

- Notes:
- A. Due to LORAN distortion at upriver stations and to computer software control of the placement of figures on these maps, the locations shown may vary slightly from the actual stations occupied. For exact latitude and longitude refer to Tables 2-25.
 - B. A single winter cruise was conducted in February for the Chesapeake Bay during the period from January through March 1998.
 - C. For purposes of clarity, if a second tow was performed at a given station, the second tow will be offset two minutes north and two minutes east from the original coordinates.
 - D. The brief and long-fin squid are presented under one heading as "Squid Species". The three species of penaeid shrimp are also combined. Three of the blue crab categories (male, juvenile female, and adult female) are shown independently, as well as summed, "All Crabs".

Figures 50-84. Monthly length frequency summaries for selected species.

- Explanations:
- A. These figures represent all specimens of each species sampled in 1998.
 - B. The y axis represents the total number caught for each size class (in mm).
 - C. For curve smoothing, the values plotted are a moving average of three of the number of fish caught at each millimeter length group; therefore fractional values can occur.
 - D. The bottom plot on each page is a summary of all fish for the entire year.
 - E. The values to the right of the month name on each plot represent the inclusive dates of the cruises during the month, in format year-month-day.
 - F. The catch per haul data presented here should not be used as a young-of-year (YOY) index. No distinction has been made in these calculations between YOY and older fish.
 - G. The brief and long-fin squid are presented under one heading as "Squid Species". The three species of penaeid shrimp are also combined. Three of the blue crab categories (male, juvenile female, and adult female) are shown independently, as well as summed, "All Crabs".

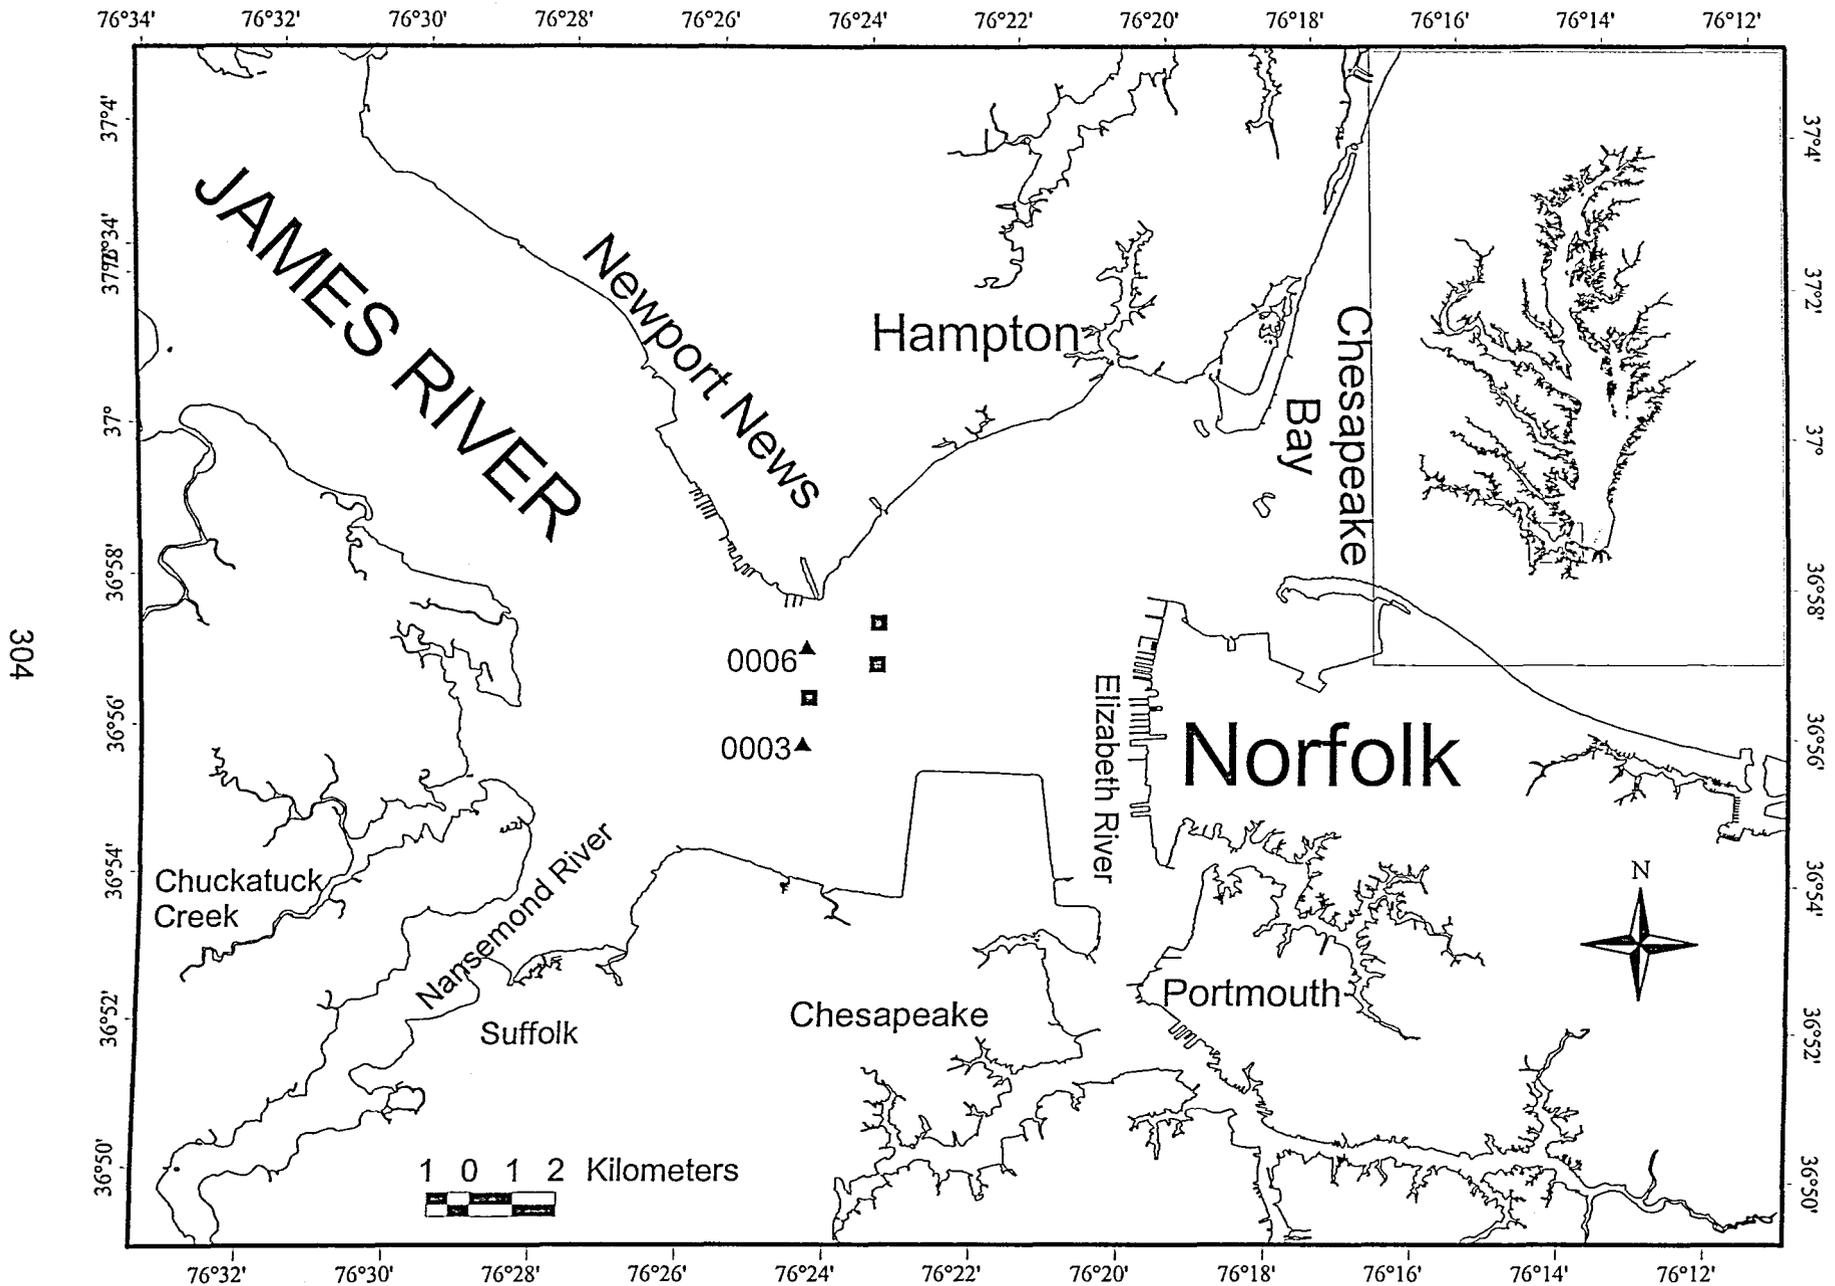

Figure 85. Trawl sites where the veined rapa whelk were first captured in 1998. Diamonds indicate adults (June 5th), squares indicate egg cases (August 24th). Tables 7 and 31 have station and hydrographic information for adult sites.

APPENDICES

Appendix A. Common and scientific names of species captured in 1998, with reference to the appropriate sampling protocol for each species.

Species Names - Common Name Order		Species Names - Latin Name Order	
Common Name	Latin Name	Latin Name	Common Name
Sampling Key: P = Presence/Absence typically recorded, C = Counts taken, Nothing = Lengths taken			
alewife	<i>Alosa pseudoharengus</i>	<i>Acipenser oxyrhynchus</i>	Atlantic sturgeon
American eel	<i>Anguilla rostrata</i>	<i>Alosa aestivalis</i>	blueback herring
American shad	<i>Alosa sapidissima</i>	<i>Alosa mediocris</i>	hickory shad
Amphipod spp (P)	<i>Amphipoda sp.</i>	<i>Alosa pseudoharengus</i>	alewife
Atlantic croaker	<i>Micropogonias undulatus</i>	<i>Alosa sapidissima</i>	American shad
Atlantic cutlassfish	<i>Trichiurus lepturus</i>	<i>Ammodytes dubius</i>	northern sand lance
Atlantic herring	<i>Clupea harengus</i>	<i>Amphipoda sp. (P)</i>	Amphipod spp
Atlantic menhaden	<i>Brevoortia tyrannus</i>	<i>Anadara ovalis (P)</i>	blood ark/clam
Atlantic moonfish	<i>Selene setapinnis</i>	<i>Anchoa hepsetus</i>	striped anchovy
Atlantic oyster drill (P)	<i>Urosalpinx cinerea</i>	<i>Anchoa mitchilli</i>	bay anchovy
Atlantic silverside	<i>Menidia menidia</i>	<i>Anguilla rostrata</i>	American eel
Atlantic spadefish	<i>Chaetodipterus faber</i>	<i>Arbacia punctulata (P)</i>	purple sea urchin
Atlantic stingray	<i>Dasyatis sabina</i>	<i>Asterias forbesi (P)</i>	forbes common sea star
Atlantic sturgeon	<i>Acipenser oxyrhynchus</i>	<i>Astroscopus guttatus</i>	northern stargazer
Atlantic thread herring	<i>Opisthonema oglinum</i>	<i>Bairdiella chrysoura</i>	silver perch
banded drum	<i>Larimus fasciatus</i>	<i>Brevoortia tyrannus</i>	Atlantic menhaden
bay anchovy	<i>Anchoa mitchilli</i>	<i>Busycon canaliculatum (C)</i>	channel (smooth) whelk
bighead searobin	<i>Prionotus tribulus</i>	<i>Busycon carica (C)</i>	knobbed whelk
black drum	<i>Pogonius cromis</i>	<i>Busycon spp. (C)</i>	whelk (conch) spp
black seabass	<i>Centropristis striata</i>	<i>Callinectes ornatus (C)</i>	shelligs blue crab
blackcheek tonguefish	<i>Symphurus plagiusa</i>	<i>Callinectes sapidus</i>	blue crab, sex unknown
blood ark/clam (P)	<i>Anadara ovalis</i>	<i>Callinectes sapidus, adult fem</i>	blue crab, adult female
blue catfish	<i>Ictalurus furcatus</i>	<i>Callinectes sapidus, juv fem</i>	blue crab, juvenile female
blue crab, adult female	<i>Callinectes sapidus, adult fem</i>	<i>Callinectes sapidus, male</i>	blue crab, male
blue crab, juvenile female	<i>Callinectes sapidus, juv fem</i>	<i>Cancer irroratus</i>	rock crab
blue crab, male	<i>Callinectes sapidus, male</i>	<i>Caranx crysos</i>	blue runner
blue crab, sex unknown	<i>Callinectes sapidus</i>	<i>Carcharhinus plumbeus</i>	sandbar shark
blue mussel (P)	<i>Mytilus edulis</i>	<i>Centropristis striata</i>	black seabass
blue runner	<i>Caranx crysos</i>	<i>Chaetodipterus faber</i>	Atlantic spadefish

Species Names - Common Name Order		Species Names - Latin Name Order	
Common Name	Latin Name	Latin Name	Common Name
Sampling Key: P = Presence/Absence typically recorded, C = Counts taken, Nothing = Lengths taken			
bluefish	<i>Pomatomus saltatrix</i>	<i>Chasmodes bosquianus</i>	striped blenny
bluespotted cornetfish	<i>Fistularia tabacaria</i>	<i>Chilomycterus schoepfi</i>	striped burrfish
bluespotted sunfish	<i>Enneacanthus gloriosus</i>	<i>Clupea harengus</i>	Atlantic herring
bluntnose stingray	<i>Dasyatis sayi</i>	<i>Conger oceanicus</i>	conger eel
brown bullhead	<i>Ictalurus nebulosus</i>	<i>Cragnon septemspinosa (P)</i>	sand shrimp
brown shrimp	<i>Penaeus aztecus</i>	<i>Cynoscion nebulosus</i>	spotted seatrout
butterfish	<i>Peprilus triacanthus</i>	<i>Cynoscion regalis</i>	weakfish
channel (smooth) whelk (C)	<i>Busycon canaliculatum</i>	<i>Cyprinus carpio</i>	common carp
channel catfish	<i>Ictalurus punctatus</i>	<i>Dasyatis sabina</i>	Atlantic stingray
cleamose skate	<i>Raja eglanteria</i>	<i>Dasyatis sayi</i>	bluntnose stingray
common carp	<i>Cyprinus carpio</i>	<i>Dorosoma cepedianum</i>	gizzard shad
conger eel	<i>Conger oceanicus</i>	<i>Dorosoma petenense</i>	threadfin shad
cownose ray	<i>Rhinoptera bonasus</i>	<i>Enneacanthus gloriosus</i>	bluespotted sunfish
fawn cusk-eel	<i>Lepophidium cervinum</i>	<i>Etheostoma olmstedi</i>	tessellated darter
feather blenny	<i>Hypsoblennius hentzi</i>	<i>Etropus crossotus</i>	fringed flounder
Florida pompano	<i>Trachinotus carolinus</i>	<i>Etropus microstomus</i>	smallmouth flounder
forbes common sea star (P)	<i>Asterias forbesi</i>	<i>Etrumeus teres</i>	round herring
fringed flounder	<i>Etropus crossotus</i>	<i>Eucinostomus argenteus</i>	spotfin mojarra
gizzard shad	<i>Dorosoma cepedianum</i>	<i>Eucinostomus gula</i>	silver jenny
grass shrimp spp (P)	<i>Palaemonetes spp.</i>	<i>Fistularia tabacaria</i>	bluespotted cornetfish
green goby	<i>Microgobius thalassinus</i>	gelatinous zooplankton (C)	jellyfish spp
harvestfish	<i>Peprilus alepidotus</i>	<i>Gobiesox strumosus</i>	skilletfish
hickory shad	<i>Alosa mediocris</i>	<i>Gobiosoma bosci</i>	naked goby
hogchoker	<i>Trinectes maculatus</i>	<i>Gobiosoma ginsburgi</i>	seaboard goby
horseshoe crab	<i>Limulus polyphemus</i>	<i>Gymnura altavela</i>	spiny butterfly ray
inshore lizardfish	<i>Synodus foetens</i>	<i>Hippocampus erectus</i>	lined seahorse
iridescent swimming crab (C)	<i>Portunus gibbesii</i>	<i>Hypsoblennius hentzi</i>	feather blenny
jellyfish spp (C)	gelatinous zooplankton	<i>Ictalurus catus</i>	white catfish
kingfish spp	<i>Menticirrhus spp.</i>	<i>Ictalurus furcatus</i>	blue catfish
knobbed whelk (C)	<i>Busycon carica</i>	<i>Ictalurus nebulosus</i>	brown bullhead
lady crab (C)	<i>Ovalipes ocellatus</i>	<i>Ictalurus punctatus</i>	channel catfish

Species Names - Common Name Order		Species Names - Latin Name Order	
Common Name	Latin Name	Latin Name	Common Name
Sampling Key: P = Presence/Absence typically recorded, C = Counts taken, Nothing = Lengths taken			
lined seahorse	<i>Hippocampus erectus</i>	<i>Larimus fasciatus</i>	banded drum
little skate	<i>Raja erinacea</i>	<i>Leiostomus xanthurus</i>	spot
little surf clam (P)	<i>Mulinia lateralis</i>	<i>Lepisosteus osseus</i>	longnose gar
longnose gar	<i>Lepisosteus osseus</i>	<i>Lepomis auritus</i>	redbreast sunfish
lookdown	<i>Selene vomer</i>	<i>Lepomis gibbosus</i>	pumpkinseed
macoma clam spp (P)	<i>Macoma spp.</i>	<i>Lepophidium cervinum</i>	fawn cusk-eel
mantis shrimp	<i>Squilla spp.</i>	<i>Libinia dubia (C)</i>	spider crab, 6 spine
moon snail (P)	<i>Polinices heros</i>	<i>Libinia emarginata (C)</i>	spider crab, common
mud crab spp (P)	<i>Xanthidae</i>	<i>Limulus polyphemus</i>	horseshoe crab
mysid shrimp (P)	<i>Mysidopsis bigelowi</i>	<i>Loligo spp.</i>	squid spp
naked goby	<i>Gobiosoma bosci</i>	<i>Macoma spp. (P)</i>	macoma clam spp
New England dog whelk (P)	<i>Nassarius triutatus</i>	<i>Macrobrachium ohione (P)</i>	river shrimp
northern pipefish	<i>Syngnathus fuscus</i>	<i>Menidia menidia</i>	Atlantic silverside
northern puffer	<i>Sphoeroides maculatus</i>	<i>Menticirrhus spp.</i>	kingfish spp
northern sand lance	<i>Ammodytes dubius</i>	<i>Mercenaria mercenaria (P)</i>	quahog clam
northern searobin	<i>Prionotus carolinus</i>	<i>Merluccius bilinearis</i>	silver hake
northern stargazer	<i>Astroscopus guttatus</i>	<i>Microgobius thalassinus</i>	green goby
oyster toadfish	<i>Opsanus tau</i>	<i>Micropogonias undulatus</i>	Atlantic croaker
pigfish	<i>Orthopristis chrysoptera</i>	<i>Morone americana</i>	white perch
pink shrimp	<i>Penaeus duorarum</i>	<i>Morone saxatilis</i>	striped bass
pipefish spp	<i>Syngnathus spp.</i>	<i>Mulinia lateralis (P)</i>	little surf clam
pollock	<i>Pollachius virens</i>	<i>Mustelus canis</i>	smooth dogfish
Portunid spp (C)	<i>Portunids</i>	<i>Mysidopsis bigelowi (P)</i>	mysid shrimp
pumpkinseed	<i>Lepomis gibbosus</i>	<i>Mytilus edulis (P)</i>	blue mussel
purple sea urchin (P)	<i>Arbacia punctulata</i>	<i>Nassarius triutatus (P)</i>	New England dog whelk
quahog clam (P)	<i>Mercenaria mercenaria</i>	<i>Notropis hudsonius</i>	spottail shiner
red drum	<i>Sciaenops ocellatus</i>	<i>Ophidion marginatum</i>	striped cusk-eel
red hake	<i>Urophycis chuss</i>	<i>Opisthonema oglinum</i>	Atlantic thread herring
redbreast sunfish	<i>Lepomis auritus</i>	<i>Opsanus tau</i>	oyster toadfish

blue crabs, penaeid shrimp, squid, mantis shrimp (0621), horseshoe crab (0603) and rock crab (0656) are measured.

Appendix C. Description of the VIMS Trawl Survey sampling strata.

- Note: A. The "No. of Points" indicates the number of possible trawl sites within a strata. '*' indicates areas not presently sampled with a RSD.
- B. Strata for the York and Rappahannock Rivers were slightly different prior to 1995. These strata have been adjusted to the present sampling system. Conversions appear in Geer, 1997.

Appendix D. The VIMS Trawl Survey Random Stratified Design of the Chesapeake Bay and its tributaries, based on depth and region. Presently the Top Bay is not being sampled.

Note: Due to Loran distortion and computer software control of the placement of points on this map, locations may vary slightly from actual sites. This distortion may make some sites appear on land.

Appendix D. The VIMS trawl survey random stratified design of the Chesapeake Bay. Transect lines indicate geographic regions.
