EXECUTIVE SUMMARY

The Virginia Institute of Marine Science (VIMS) has conducted a trawl survey dating back to 1955. Over these forty years methods and objectives have varied according to funding sources and state and/or federal mandates. The present thrust of the program is to provide juvenile indices of relative abundance for recreationally, commercially, and ecologically important finfish and invertebrates. These measures of juvenile abundance are widely used as a key element in the management of the Atlantic States' coastal fishery resources. Estimates of juveniles (age-0) have proven to be a reliable and early indicator of future year-class strength. A review of previously available indices of juvenile abundance for important fishery resource species of the Chesapeake Bay by the Chesapeake Bay Stock Assessment Committee (CBSAC), a federal/state committee sponsored and funded by the National Oceanic and Atmospheric Administration (NOAA), resulted in the recommendation that, "a unified, consistent trawl program should be one of the primary monitoring tools for finfish and crab stock assessment." (Chesapeake Bay Program Stock Assessment Plan, Chesapeake Executive Council 1988).

There were several notable survey results for this year. Catch information for 1994 indicated a continuing decline in the blue crab population, although not as pronounced as in recent years. However, the 1994 spawning stock (adult females) was half that of 1993. Juvenile white perch and striped bass catches continued to increase. Summer flounder indices doubled over the disastrous 1992 and 1993 year classes. Atmosperically, winter temperatures were normal with the exception of two extremely cold periods (air temperatures less than 4° C). Summer temperatures were relatively mild compared to 1993 values.

The purpose of this summary is to provide an accurate account of trawl survey sampling performed during the calendar year 1994. Previous volumes of this series have served as excellent reference guides to resource managers, scientists, academics, as well as the general public. Since there are other venues which presently detail specific results of these data (Geer et al., 1993), conclusions are kept at a minimum in order to provide the most information in the available space.

INTRODUCTION

This report summarizes data collected by the Virginia Institute of Marine Science (VIMS) monthly trawl survey cruises for January-December 1994. The trawl survey is a long-term, broad scope monitoring program. Its primary goal is to produce annual indices for juvenile marine and estuarine finfish and invertebrates. The objective is to provide indices of sufficient accuracy and precision for both immediate resource management needs and long-term understanding of environmental influences on fishery resources. A second important product of this effort is the documentation and monitoring of habitat utilization by juveniles and smaller adults of these species. The program also provides a sound framework for the procurement of biological samples for life history studies and other current investigations relevant to fisheries resource management.

In order to facilitate the implementation of such a program, CBSAC has subsequently encouraged and directly supported pilot studies to develop a comprehensive Bay-wide trawl survey. In the Virginia portion of the Chesapeake Bay, the primary focus of this support was the initiation of a monthly trawl survey of the lower Bay beginning January 1988. This greatly expanded the program and directly complimented the monthly trawl surveys of the major Virginia tributaries (James, York and Rappahannock rivers), which began in 1964, 1955 and 1962 respectively. These programs have continued with only slight modifications, mainly the addition of a solely dedicated research platform, the R/V Fish Hawk, in September 1990.

At present, the program consists of a monthly random stratified design survey of the lower Chesapeake Bay initiated in 1988 (Chittenden, 1989) and fixed station mid-channel transects in each of the three major Virginia tributaries: the York, James and Rappahannock rivers (Wojcik and Van Engel, 1988a, 1988b, 1989). The river survey is based upon a sampling program initiated in 1955. Changes in gear type and sampling methods used over the history of the survey are summarized in Figure 1.

The following tables and figures include data for all finfish and selected invertebrates (blue crabs, penaeid shrimp, and squid species) caught during 1994. The shrimp and squid species have been examined inconsistently in the past, with 1993 being the first year specimens have routinely been processed. The squid species include those of the family Lologinidae and consist mainly of long-finned squid, *Loligo pealei*. The most commonly captured species of kingfish, southern kingfish (*Menticirrhus americanus*) and northern kingfish (*Menticirrhus saxatilis*), have been difficult to identify in the field at small sizes due to overlapping, and non-distinct, meristic characteristics. As a result, the decision was made to combine these species under one heading (kingfish, *Menticirrhus* sp.) until further identification protocol can be examined. Data are also presented showing station locations, and atmospheric and hydrographic data collected at each station.

METHODS

All sampling was performed aboard the research vessel FISH HAWK (photo, opposite page). The sampling gear was a 30' semi-balloon otter trawl (Marinovich Gulf Shrimp Trawl) with a 1½" stretch mesh body, a ¼" mesh cod end liner, attached tickler chain, 60' bridle length, and a 3:1 warp, using steel china-v doors (28" x 19"). The tow duration was five minutes bottom time at a speed of approximately 2½ knots. A sample day was defined as the period between sunrise and sunset.

At each station, station identification, beginning and ending latitude and longitude, depth, tidal current stage, secchi depth, tow direction (upstream vs. downstream and relative to current), beginning and ending time, tow duration, air temperature, wind direction, wind speed, weather conditions, and sea state were recorded. Surface and bottom hydrographic data (temperature, salinity and dissolved oxygen), were recorded immediately following the tow at a depth consistent with that of the trawling depth. Onboard processing of catches involved separating them according to species, and measuring individual lengths (to the nearest millimeter). For fish species, all lengths were taken as fork lengths unless no fork was present for a given species, in which case total length was measured. For blue crabs, point-to-point carapace width was measured (called long carapace width) and fecundity of adult females was assessed with individual egg stage being determined. The penaeid shrimp were measured for total length while the squid species were measured for mantle length. These data were entered directly into computer files using electronic measuring boards. Subsampling was performed when large homogeneous catches of a species were made. On these occasions, a subsampling protocol was followed with enumeration of the discarded sample taking priority over subsampling by volume. When subsampling was performed by volume, the total weights of the discarded sample and of the subsample were taken and the individual fish in the subsample were enumerated and measured. Average weight per fish was then estimated from the subsample (total subsample weight ÷ total subsample number). Number of fish in the discarded catch was estimated by dividing total discarded weight by calculating average weight. Station and environmental data were recorded first on paper and later transferred to the computer database. A sample data sheet appears in Appendix A.

Chesapeake Bay Survey

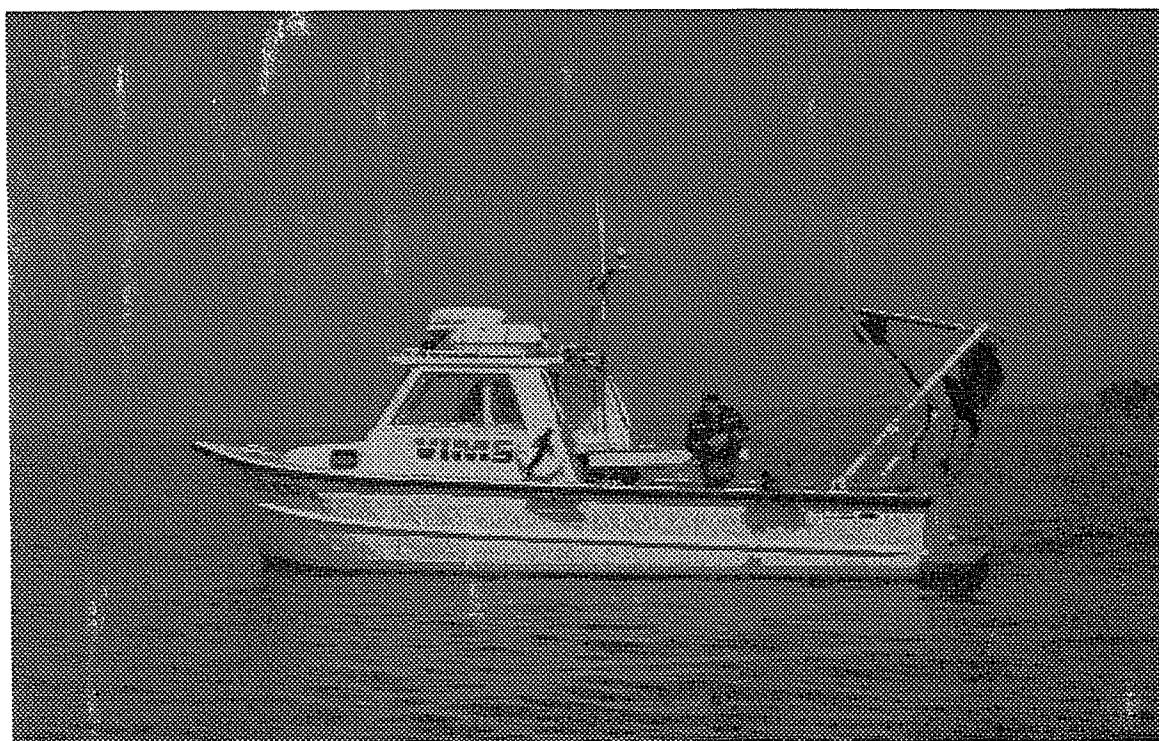

The sampling design in the mainstem bay was based on stratification by latitude and water depth. The Bay was latitudinally divided into four 15 minute blocks (segments) labeled bottom (below 37°10'N), lower (37°10'-37°25'N), upper (37°25'-37°40'N), and top (above 37°40'N). Within each segment, depth strata were defined as eastern shore shoal areas (12-30 ft), western shore shoal areas (12-30 ft), plain areas (30-42 ft), and deep areas (>42 ft), resulting in a total of 16 strata. A map of the strata appears in Appendix B. The northernmost portion of Virginia's waters (i.e. Top Bay) has not been sampled since 1988 because of funding constraints.

Station selection for each cruise was made randomly through use of the National Ocean Survey's Chesapeake Bay bathymetric grid system computerized files. This system contains position and depth records at $\frac{1}{4}$ mile intervals, the same distance as the average tow length. Four stations were selected monthly in each plain stratum and three stations for each deep strata. During warm months (May through November) three stations were sampled in each shoal strata; during cold months (January through April, and December) only two shoal stations were sampled per strata.

Previous cruises have indicated few species occupy the mainstem Chesapeake Bay during winter months. With this in mind, a combined January/February cruise was conducted for the bay in both the 1992 and 1993 surveys in order to better allocate our sampling resources. Further investigation indicated no significant difference in abundance for several key species during the months of January through March (Geer, unpublished). As a result, a single Bay cruise in February was conducted again in 1994 to represent the period from January through March.

River Survey

The fixed mid-channel river stations were defined at approximate 5-mile intervals from the river mouths to approximately the freshwater interface. Generally one tow was made at each station each month. A second tow, opposite in direction, was made at selected *blue crab index stations* during the warm months (May through November). During the cold months, additional stations were occupied upstream to extend the range of the survey, enabling better monitoring of some anadromous species.

Research Vessel Fish Hawk on the York River

RESULTS

Catch data in this report represent total numbers caught. The average weights were removed from the tables beginning in 1994 because, in most cases, weights were not typically taken in the field except for subsampling purposes or for unusually large specimens. Weights taken on individual specimens are not usually representative of the catch and are thus biased, prompting the removal of that information for the report. For some species, representative samples were brought back to the laboratory in order to establish accurate weight estimates and length-weight relationships. The effort to establish length-weight relationships will continue to be expanded in the future so that biomass estimates of the trawl catch can be presented along with abundance estimates.

Figures 2-13 show the locations of the stations occupied each month in 1994. Table 1 shows the codes used for the various hydrographic and atmospheric parameters. The corresponding station information is located in Tables 2-13 (river survey) and Tables 14-23 (bay survey). The hydrographic and atmospheric data for the river survey is found in Tables 24-35, and for the bay in Tables 36-45.

Figures 14-44 geographically illustrate catch by month and station for the predominant species (the 18 most abundant finfish species - historically, three categories of blue crabs, plus other species of interest, arranged alphabetically) over the entire sampling area. These figures provide a helpful synopsis for showing temporal and geographic distribution of these species.

Figures 45-75 provide monthly length-frequency summaries for the above selected species. These graphs and accompanying statistics are useful in separating young-of-year from older fish since the age of each fish is not taken. Calendar year is not the optimal way to present such data for species that spawn late in the year, however the figures are presented this way for convenience and consistency.

Catch, catch per unit effort (CPUE), and length statistics for the data pooled from both surveys for the entire year are in Table 46. Two new variables, 'Adjusted Percent of Catch' and 'Number of Index Age Fish' were added in 1994, and in turn, 'Percent Within River', 'Cumulative Percent', and 'Average Weight' were deleted. The 'Average Weight' variable was misleading since it did not represent the overall catch. 'Cumulative Percent' seemed redundant with 'Percent of Catch' already existing and was removed in order to provide additional information on juvenile fish. Similar data for the river survey only, by river, pooled over months is presented in Tables 47-50. Likewise, data for the Chesapeake Bay survey only, by segment, pooled by months is shown in Tables 51-54. Tables 55-102 contain analogous data summaries by month and river for the river trawl survey and Tables 103-142 by month and segment for the Chesapeake Bay survey.

Catch information for 1994 indicated a continuing decline in the blue crab population, although not as pronounced as in recent years. However, the 1994 spawning stock (adult females) was half that of 1993. Striped anchovy values were remarkably higher in 1994 than

in previous years, with overall species abundance ranking increasing from the 32nd to the 4th most abundant species. This is due mainly to a few very large catches on the lower Bay in August. Other VIMS surveys confirm these abundance values. Juvenile white perch and striped bass catches continued to increase. Summer flounder indices doubled over the disastrous 1992 and 1993 year classes.

DISCUSSION

The purpose of this report is to present a quick visual summary of the data collected during the 1994 VIMS trawl survey. A more analytical review of these data for target species for 1979-1994 is presented by Bonzek et. al., 1995.

Atmospheric conditions in 1994 included relatively normal winter and summer temperatures for the area sampled. Aside from the addition of blue crab fecundity observations, no major changes in sampling methodology or sampling gear occurred in 1994. A random stratified experimental survey was continued in the York River again in 1994, the purpose still being to provide comparisons between fixed and random surveys with an eventual switch to all random stations projected for the future. Experimental work comparing catches using present and past gear configurations was also continued in an effort to standardize catch rates among gear types and thus, provide a longer reliable time series of juvenile abundance. Neither the experimental random survey data, nor the experimental comparisons were presented in this report.

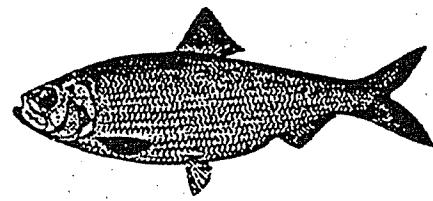

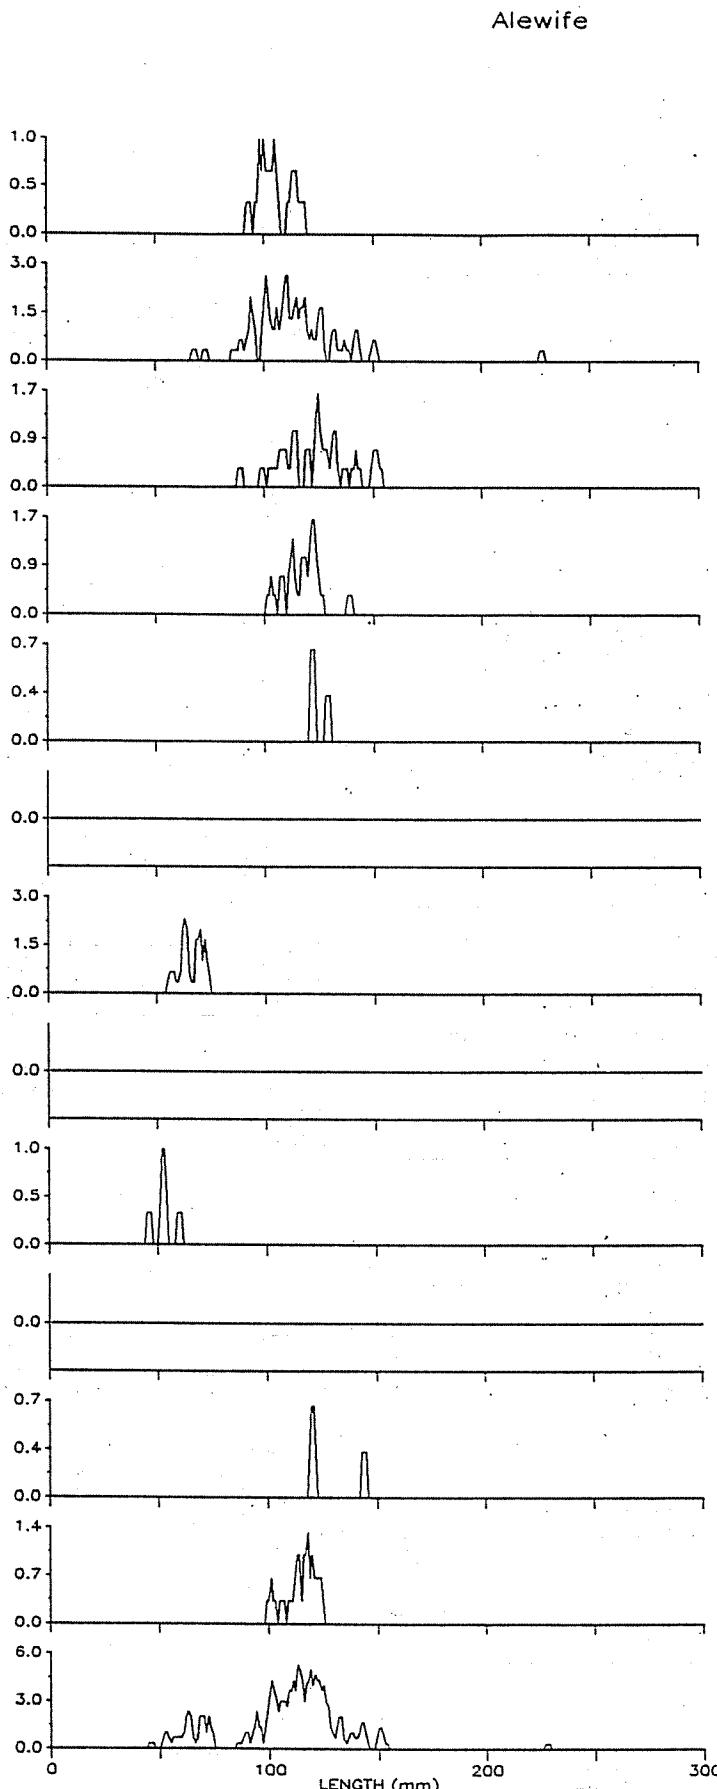

Figures 44-73. Monthly length frequency summaries for the predominant species.

Explanations:

- A. These figures represent all fish of each species presented from both the river and bay surveys.
- B. For curve smoothing, the values plotted are a moving average of three of the number of fish caught at each millimeter length group; therefore fractional values can occur.
- C. The bottom plot on each page is a summary of all fish for the entire year.
- D. The values to the right of the month name on each plot represent the inclusive dates of the cruises during the month, in format year-month-day.
- E. The catch per haul dat presented here should not be used as a young-of-year (YOY) index. No distinction has been made in these calculations between YOY and older fish.

Figure 73.

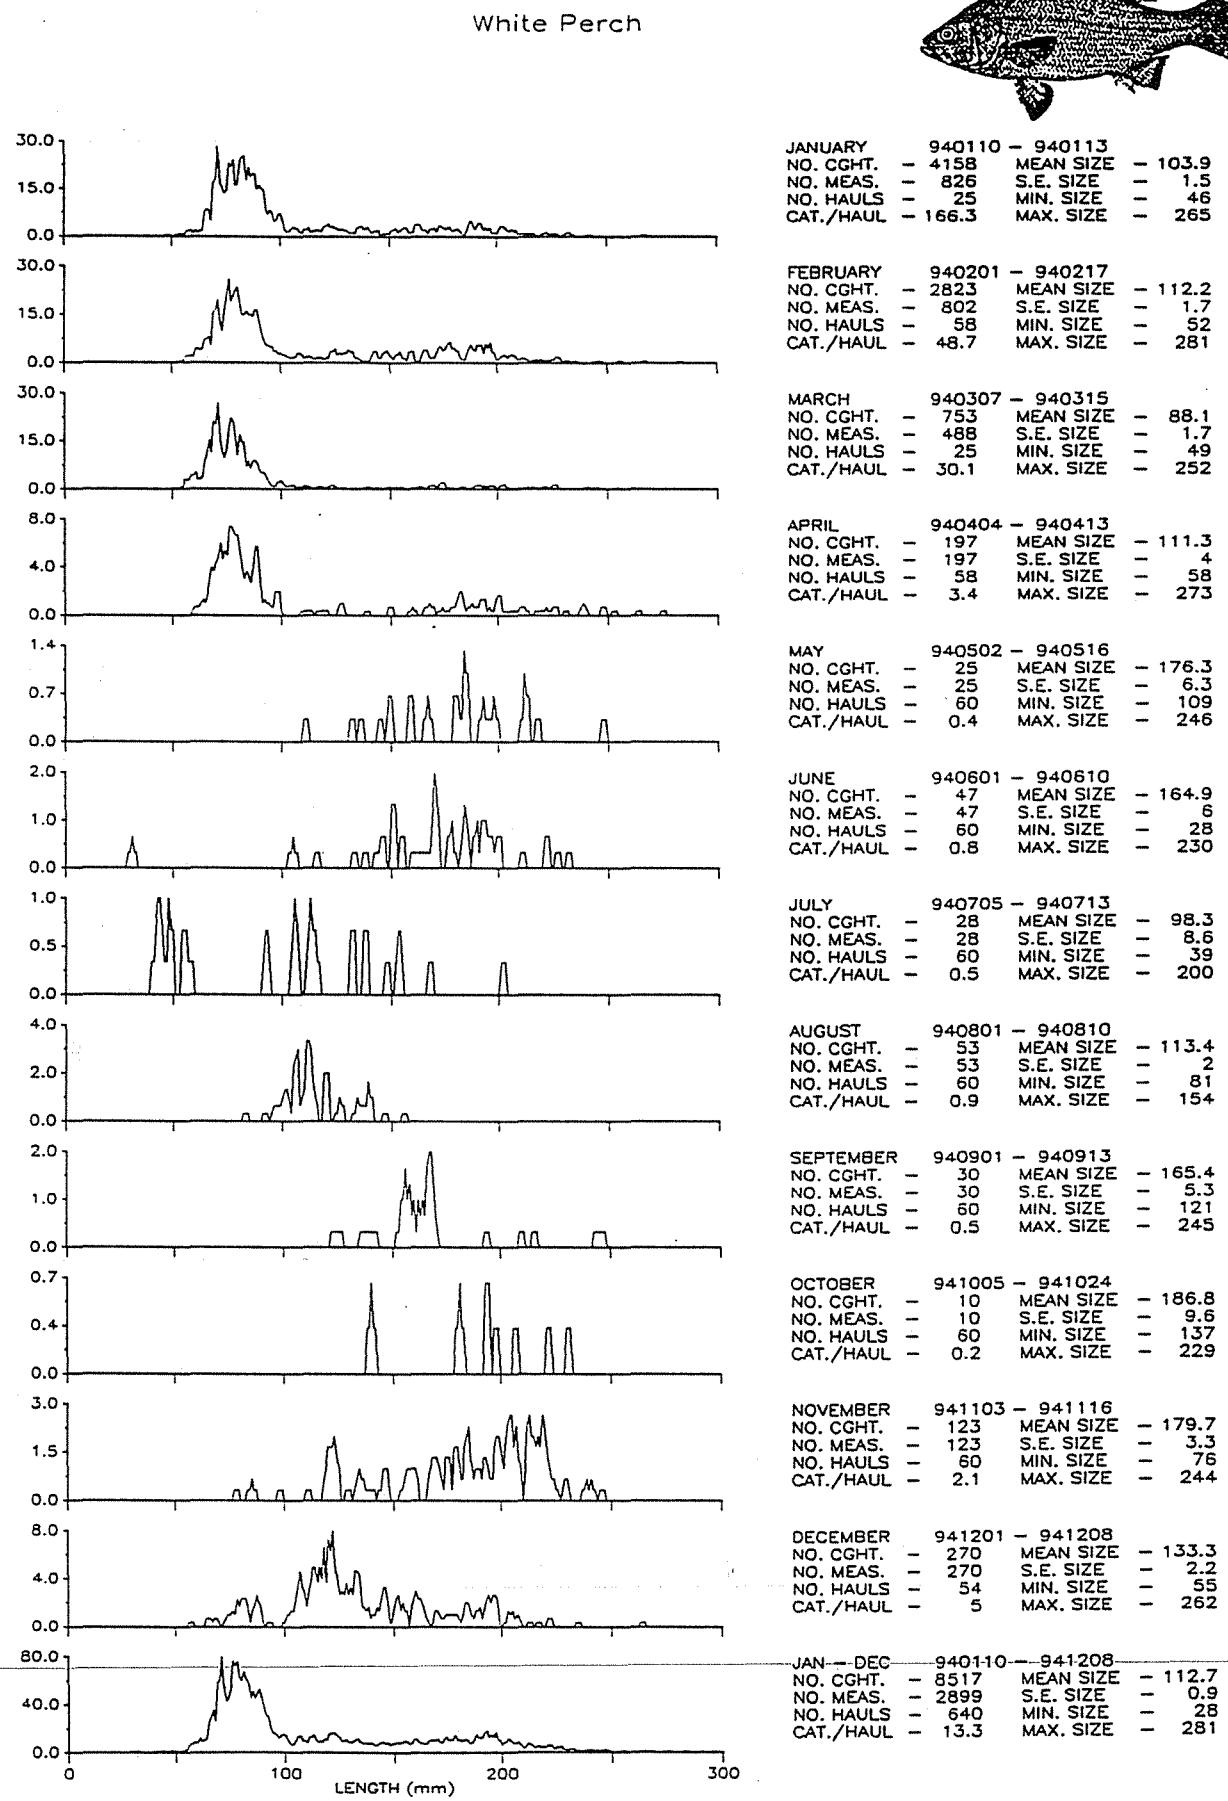

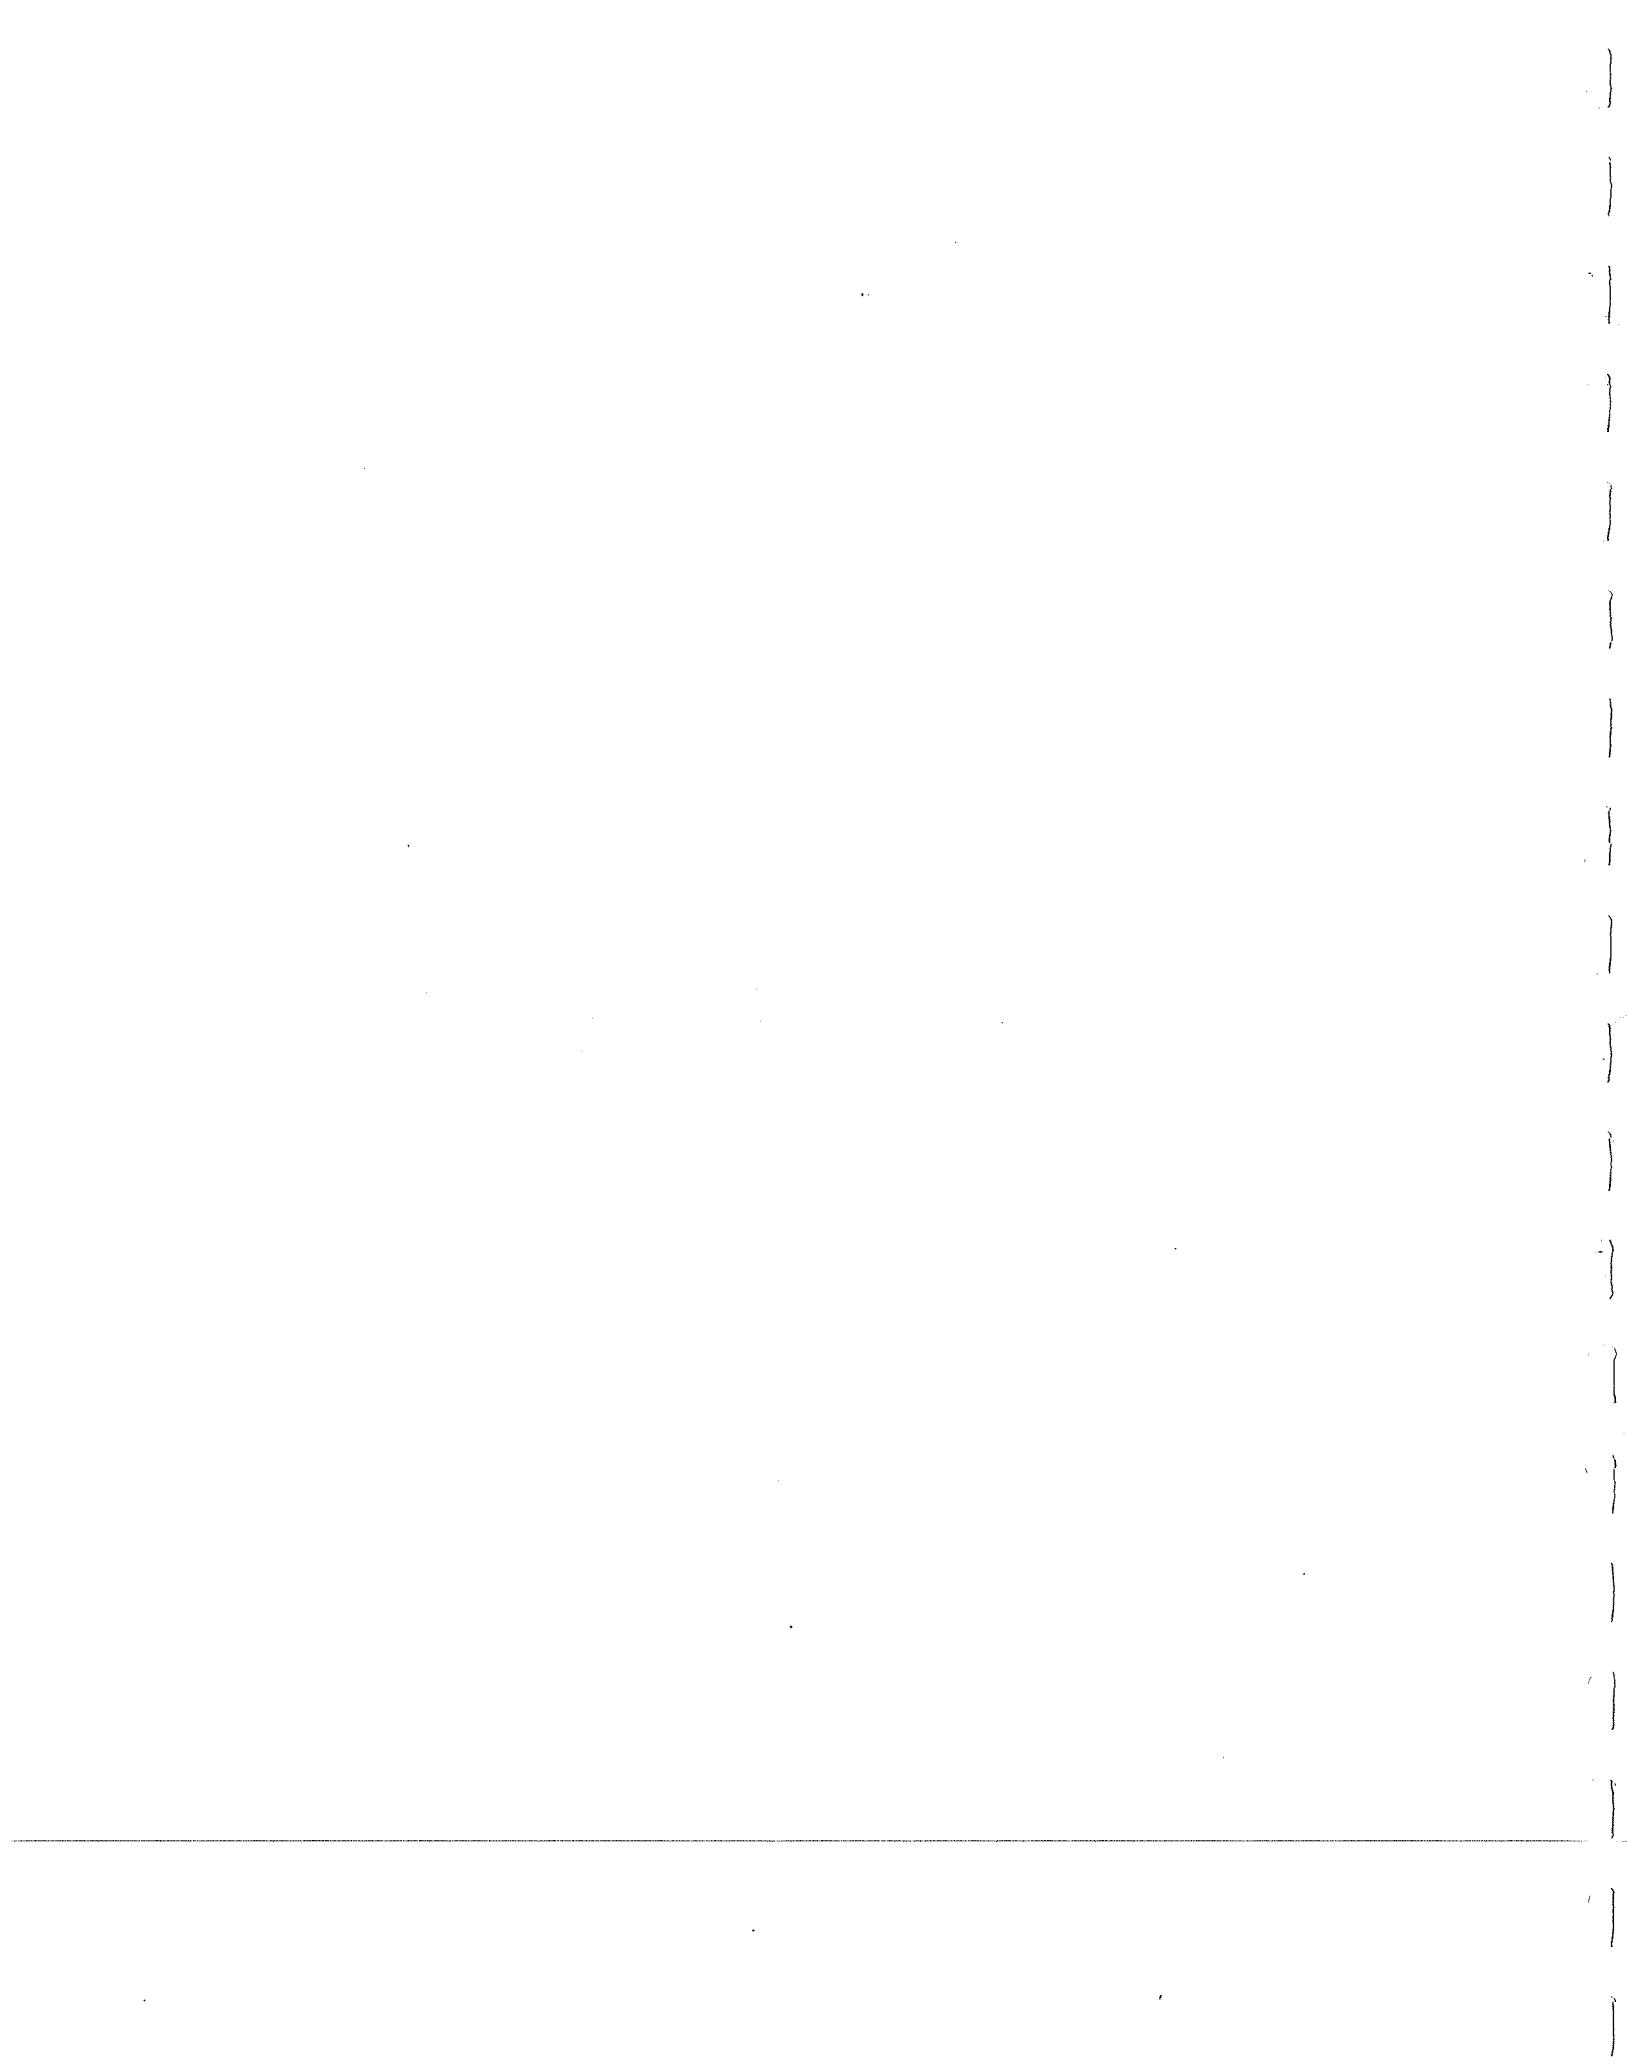

Table 1. VIMS codes for selected parameters as used in the trawl survey database. These same codes appear in several of the included tables and figures.

TOWDIR 1: Tow Direction, up or down stream

- 1: Upstream
- 2: Downstream
- 3: Slack

TOWDIR2: Tow Direction, relative to current

- | | |
|------------------|--------------------|
| 1: With | 4: Oblique with |
| 2: Against | 5: Oblique against |
| 3: Perpendicular | 6: Slack |

TIDE: Tidal stage

- | | |
|---------------------|-----------------------|
| 1: Early flood | 5: Early ebb |
| 2: Maximum flood | 6: Maximum ebb |
| 3: Late flood | 7: Late ebb |
| 4: Slack before ebb | 8: Slack before flood |

SEASTATE

- | | |
|-----------------------------|--------------------|
| 0: Calm-glassy 0m | 5: Rough 2.5-4m |
| 1: Calm-rippled 0-0.1m | 6: Very rough 4-6m |
| 2: Smooth-wavelets 0.1-0.5m | 7: High 6-9m |
| 3: Slight 0.5-1.25m | 8: Very high 9-14m |
| 4: Moderate 1.25-2.5m | 9: Phenomenal >14m |

WEATHER: Observed weather

- | | |
|--------------------------------------|---------------------------|
| 1: Clear-no cloud at any level | 5: Drizzle |
| 2: Partly cloudy-scattered or broken | 6: Rain |
| 3: Overcast | 7: Snow-rain and snow mix |
| 4: Sand, dust storm, or blowing snow | 8: Showers |
| 5: Fog-thick, dust, or haze | 9: Thunderstorms |

STRATUM: Geographic stratum

- | | |
|----------------------------------|----------------------------------|
| 1: Bottom Western Shore 12-30 ft | 9: Upper Western Shore 12-30 ft |
| 2: Bottom Eastern Shore 12-30 ft | 10: Upper Eastern Shore 12-30 ft |
| 3: Bottom Plain 30-42 ft | 11: Upper Plain 30-42 ft |
| 4: Bottom Deep >42 ft | 12: Upper Deep >42 ft |
| 5: Lower Western Shore 12-30 ft | 13: Top Western Shore 12-30 ft |
| 6: Lower Eastern Shore 12-30 ft | 14: Top Eastern Shore 12-30 ft |
| 7: Lower Plain 30-42 ft | 15: Top Plain 30-42 ft |
| 8: Lower Deep >42 ft | 16: Top Deep >42 ft |

Tables 2-13. Station data for the river trawl survey by month.

Explanation.

To conserve space, some variables are presented as coded values. Code keys are presented in Table 1 (p. 113).

Table 2.

Tables 14-23. Station data for the Chesapeake Bay trawl survey by month.

Explanation: To conserve space, some variables are presented as coded values.
Code keys are presented in Table 1 (p. 113).

Table 14.

February

Cruise Number	Station Number	Stratum Code	Station Date	Beginning Latitude	Beginning Longitude	Ending Latitude	Ending Longitude	Tow Dist. (m)	Depth (m)	Tow Direct. Up or Down Stream	Tow Direct. Rel. to Current	Sea State	Tidal Stage

Tables 24-35. Atmospheric and hydrographic data for the river trawl survey by month.

Explanation:

- A. To conserve space, some variables are presented as coded values. Code keys are presented in Table 1 (p.113).
- B. Due to measurement error (calibration differences and instrument drift) associated with the hydrographic equipment used to measure temperature, salinity, and dissolved oxygen, some calculated saturation values presented here are greater than 100 %.

Tables 36-45. Atmospheric and hydrographic data for the Chesapeake Bay trawl survey by month.

Explanations:

- A. To conserve space, some variables are presented as coded values. Code keys are presented in Table 1 (p. 113).
- B. Due to measurement error (calibration differences and instrument drift) associated with the hydrographic equipment used to measure temperature, salinity, and dissolved oxygen, some calculated saturation values presented here are greater than 100%.

Table 36.

February

Table 46. Species composition, number caught, catch per trawl, and length statistics for all months, all areas, Chesapeake Bay and river trawl surveys combined.

- Notes:
- A. The 'Number of Species' notation at the top of the table includes each of the three categories of blue crabs (male, juvenile female, adult female) as a different "species".
 - B. Catch per trawl for fish species is based on the figure 'Number of Fish Trawls Made' while catch per trawl for blue crabs is based on the sum of 'Number of Fish Trawls Made' and 'Number of Additional Crab Trawls Made'.
 - C. 'Adjusted Percent of Catch' excludes bay anchovy and hogchoker due to low biomass estimates in relation to number of fish caught.
 - D. Two new variables, 'Adjusted Percent of Catch' and 'Number of Index Age Fish', have replaced the variables 'Cumulative Percent' and 'Average Weight' in this year's report. The 'Average Weight' variable was misleading since it was based only on those specimens where weight was taken, not the overall catch. 'Cumulative Percent' seemed somewhat redundant with 'Percent of Catch' already existing and was removed in favor of 'Adjusted Percent of Catch', a more informative variable.

Tables 47-50. Species composition, number caught, catch per trawl, and length statistics for all months, by river, for the river trawl survey.

Notes:

- A. The 'Number of Species' notation at the top of the table includes each of the three categories of blue crabs (male, juvenile female, adult female) as a different "species".
- B. Catch per trawl for fish species is based on the figure 'Number of Fish Trawls Made' while catch per trawl for blue crabs is based on the sum of 'Number of Fish Trawls Made' and 'Number of Additional Crab Trawls Made'.
- C. 'Adjusted Percent of Catch' excludes bay anchovy and hogchoker due to low biomass estimates in relation to number of fish caught.
- D. Two new variables, 'Adjusted Percent of Catch' and 'Number of Index Age Fish' have replaced the variables 'Cumulative Percent' and 'Average Weight' in this year's report. The 'Average Weight' variable was misleading since it was based only on those specimens where weight was taken, not the overall catch. 'Cumulative Percent' seemed somewhat redundant with 'Percent of Catch' already existing and was removed in favor of 'Adjusted Percent of Catch', a more informative variable.

All Species Combined

160,381

Tables 51-54. Species composition, number caught, catch per trawl, and length statistics for all months, by segment, for the Chesapeake Bay trawl survey.

Notes:

- A. The 'Number of Species' notation at the top of the table includes each of the three categories of blue crabs (male, juvenile female, adult female) as a different "species".
- B. Catch per trawl for fish species is based on the figure 'Number of Fish Trawls Made' while catch per trawl for blue crabs is based on the sum of 'Number of Fish Trawls Made' and 'Number of Additional Crab Trawls Made'.
- C. 'Adjusted Percent of Catch' excludes bay anchovy and hogchoker due to low biomass estimates in relation to number of fish caught.
- D. Two new variables, 'Adjusted Percent of Catch' and 'Number of Index Age Fish' have replaced the variables 'Cumulative Percent' and 'Average Weight' in this year's report. The 'Average Weight' variable was misleading since it was based only on those specimens where weight was taken, not the overall catch. 'Cumulative Percent' seemed somewhat redundant with 'Percent of Catch' already existing and was removed in favor of 'Adjusted Percent of Catch', a more informative variable.

All Species Combined

175.917

Tables 55-102. Species composition, number caught, catch per trawl, and length statistics by month and river for the river trawl survey.

Notes: A. The 'Number of Species' notation at the top of the table includes each of the three categories of blue crabs (male, juvenile female, adult female) as a different "species".

B. Tables pooled for all rivers, for each month appear as follows:

January	Table 58	Page 155
February	Table 62	Page 157
March	Table 66	Page 159
April	Table 70	Page 161
May	Table 74	Page 163
June	Table 78	Page 165
July	Table 82	Page 167
August	Table 86	Page 169
September	Table 90	Page 171
October	Table 94	Page 173
November	Table 98	Page 175
December	Table 102	Page 177

- C. Catch per trawl for fish species is based on the figure 'Number of Fish Trawls Made' while catch per trawl for blue crabs is based on the sum of 'Number of Fish Trawls Made' and 'Number of Additional Crab Trawls Made'.
- D. 'Adjusted Percent of Catch' excludes bay anchovy and hogchoker due to low biomass estimates in relation to number of fish caught.
- E. Two new variables, 'Adjusted Percent of Catch' and 'Number of Index Age Fish' have replaced the variables 'Cumulative Percent' and 'Average Weight' in this year's report. The 'Average Weight' variable was misleading since it was based only on those specimens where weight was taken, not the overall catch. 'Cumulative Percent' seemed somewhat redundant with 'Percent of Catch' already existing and was removed in favor of 'Adjusted Percent of Catch', a more informative variable.

All Species Combined		47,584							

Tables 103-142. Species composition, number caught, catch per trawl, and length statistics by month and segment for the Chesapeake Bay trawl survey.

- Notes:
- A. The 'Number of Species' notation at the top of each table includes each of the three categories of blue crabs (male, juvenile female, adult female) as a different "species".
 - B. Tables pooled for all segments, for each month appear as follows:

February	Table 106	Page 180
April	Table 110	Page 182
May	Table 114	Page 184
June	Table 118	Page 186
July	Table 122	Page 188
August	Table 126	Page 190
September	Table 130	Page 193
October	Table 134	Page 196
November	Table 138	Page 199
December	Table 142	Page 201

- C. Catch per trawl for fish species is based on the figure 'Number of Fish Trawls Made' while catch per trawl for blue crabs is based on the sum of 'Number of Fish Trawls Made' and 'Number of Additional Crab Trawls Made'.
- D. 'Adjusted Percent of Catch' excludes bay anchovy and hogchoker due to low biomass estimates in relation to number of fish caught.
- E. Two new variables, 'Adjusted Percent of Catch' and 'Number of Index Age Fish' have replaced the variables 'Cumulative Percent' and 'Average Weight' in this year's report. The 'Average Weight' variable was misleading since it was based only on those specimens where weight was taken, not the overall catch. 'Cumulative Percent' seemed somewhat redundant with 'Percent of Catch' already existing and was removed in favor of 'Adjusted Percent of Catch', a more informative variable.

APPENDIX B

Chesapeake Bay Trawl Strata, 1989 to present

APPENDIX C

Common and Scientific Names of Species Caught During 1994

Species Names - Common Name Order		Species Names - Latin Name Order	
Common Name	Latin Name	Latin Name	Common Name
American eel	<i>Anguilla rostrata</i>	<i>Alosa aestivalis</i>	blueback herring
American shad	<i>Alosa sapidissima</i>	<i>Alosa pseudoharengus</i>	alewife
Atlantic croaker	<i>Micropogonias undulatus</i>	<i>Alosa sapidissima</i>	American shad
Atlantic cutlassfish	<i>Trichiurus lepturus</i>	<i>Anchoa hepsetus</i>	striped anchovy
Atlantic herring	<i>Clupea harengus</i>	<i>Anchoa mitchilli</i>	bay anchovy
Atlantic menhaden	<i>Brevoortia tyrannus</i>	<i>Anguilla rostrata</i>	American eel
Atlantic moonfish	<i>Selene setapinnis</i>	<i>Archosargus probatocephalus</i>	sheepshead
Atlantic silverside	<i>Menidia menidia</i>	<i>Astroscopus guttatus</i>	northern stargazer
Atlantic spadefish	<i>Chaetodipterus faber</i>	<i>Bairdiella chrysoura</i>	silver perch
Atlantic thread herring	<i>Opisthonema oglinum</i>	<i>Brevoortia tyrannus</i>	Atlantic menhaden
alewife	<i>Alosa pseudoharengus</i>	<i>Callinectes sapidus, ad fem</i>	blue crab, adult female
banded drum	<i>Larimus fasciatus</i>	<i>Callinectes sapidus, juv fem</i>	blue crab, juvenile female
bay anchovy	<i>Anchoa mitchilli</i>	<i>Callinectes sapidus, male</i>	blue crab, male
bighead searobin	<i>Prionotus tribulus</i>	<i>Centropristes philadelphica</i>	rock seabass
black seabass	<i>Centropristes striata</i>	<i>Centropristes striata</i>	black seabass
blackcheek tonguefish	<i>Syphurus plagiusa</i>	<i>Chaetodipterus faber</i>	Atlantic spadefish
blackwing searobin	<i>Prionotus salmonicolor</i>	<i>Chilomycterus schoepfi</i>	striped burrfish
blue catfish	<i>Ictalurus furcatus</i>	<i>Clupea harengus</i>	Atlantic herring
blue crab, adult female	<i>Callinectes sapidus, ad fem</i>	<i>Conger oceanicus</i>	conger eel
blue crab, juvenile female	<i>Callinectes sapidus, juv fem</i>	<i>Cynoscion nebulosus</i>	spotted seatrout
blue crab, male	<i>Callinectes sapidus, male</i>	<i>Cynoscion regalis</i>	weakfish
blueback herring	<i>Alosa aestivalis</i>	<i>Cyprinodon variegatus</i>	sheepshead minnow
bluefish	<i>Pomatomus saltatrix</i>	<i>Cyprinus carpio</i>	common carp
bluespotted cornetfish	<i>Fistularia tabacaria</i>	<i>Dasyatis americana</i>	southern stingray
bluntnose stingray	<i>Dasyatis sayi</i>	<i>Dasyatis sayi</i>	bluntnose stingray
brown bullhead	<i>Ictalurus nebulosus</i>	<i>Diplodus holbrooki</i>	spottail pinfish
brown shrimp	<i>Penaeus aztecus</i>	<i>Dorosoma cepedianum</i>	gizzard shad
butterfish	<i>Peprilus triacanthus</i>	<i>Dorosoma petenense</i>	threadfin shad
channel catfish	<i>Ictalurus punctatus</i>	<i>Etheostoma olmstedi</i>	tessellated darter
clearnose skate	<i>Raja eglanteria</i>	<i>Etropus crossotus</i>	fringed flounder
cobia	<i>Rachycentron canadum</i>	<i>Etropus microstomus</i>	smallmouth flounder
common carp	<i>Cyprinus carpio</i>	<i>Etrumeus teres</i>	round herring
conger eel	<i>Conger oceanicus</i>	<i>Eucinostomus gula</i>	silver jenny
dusky pipefish	<i>Syngnathus floridae</i>	<i>Fistularia tabacaria</i>	bluespotted cornetfish
eastern silvery minnow	<i>Hybognathus regius</i>	<i>Fundulus majalis</i>	striped killifish
feather blenny	<i>Hypsoblennius hentzi</i>	<i>Gobiesox strumosus</i>	skilletfish
fourspot flounder	<i>Paralichthys oblongus</i>	<i>Gobiosoma boscii</i>	naked goby
fringed flounder	<i>Etropus crossotus</i>	<i>Gobiosoma ginsburgi</i>	seaboard goby
gizzard shad	<i>Dorosoma cepedianum</i>	<i>Gymnura altavela</i>	spiny butterfly ray
green goby	<i>Microgobius thalassinus</i>	<i>Hippocampus erectus</i>	lined seahorse
harvestfish	<i>Peprilus alepidotus</i>	<i>Hybognathus regius</i>	eastern silvery minnow
hogchoker	<i>Trinectes maculatus</i>	<i>Hypsoblennius hentzi</i>	feather blenny
inshore lizardfish	<i>Synodus foetens</i>	<i>Ictalurus catus</i>	white catfish
kingfish	<i>Menticirrhus spp.</i>	<i>Ictalurus furcatus</i>	blue catfish
lined seahorse	<i>Hippocampus erectus</i>	<i>Ictalurus nebulosus</i>	brown bullhead

Species Names - Common Name Order		Species Names - Latin Name Order	
Common Name	Latin Name	Latin Name	Common Name
little skate	<i>Raja erinacea</i>	<i>Ictalurus punctatus</i>	channel catfish
longnose gar	<i>Lepisosteus osseus</i>	<i>Lagodon rhomboides</i>	pinfish
lookdown	<i>Selene vomer</i>	<i>Larimus fasciatus</i>	banded drum
naked goby	<i>Gobiosoma boscii</i>	<i>Leiostomus xanthurus</i>	spot
northern pipefish	<i>Syngnathus fuscus</i>	<i>Lepisosteus osseus</i>	longnose gar
northern puffer	<i>Sphoeroides maculatus</i>	<i>Menidia menidia</i>	Atlantic silverside
northern searobin	<i>Prionotus carolinus</i>	<i>Menticirrhus spp.</i>	kingfish
northern sennet	<i>Sphyraena borealis</i>	<i>Merluccius bilinearis</i>	silver hake
northern stargazer	<i>Astroscopus guttatus</i>	<i>Microgobius thalassinus</i>	green goby
oyster toadfish	<i>Opsanus tau</i>	<i>Micropogonias undulatus</i>	Atlantic croaker
pigfish	<i>Orthopristis chrysoptera</i>	<i>Morone americana</i>	white perch
pinfish	<i>Lagodon rhomboides</i>	<i>Morone saxatilis</i>	striped bass
pink shrimp	<i>Penaeus duorarum</i>	<i>Mustelus canis</i>	smooth dogfish
red hake	<i>Urophycis chuss</i>	<i>Notropis hudsonius</i>	spottail shiner
rock seabass	<i>Centropristes philadelphica</i>	<i>Ophidion marginatum</i>	striped cusk-eel
round herring	<i>Etrumeus teres</i>	<i>Opisthonema oglinum</i>	Atlantic thread herring
scup	<i>Stenotomus chrysops</i>	<i>Opsanus tau</i>	oyster toadfish
sea lamprey	<i>Petromyzon marinus</i>	<i>Orthopristis chrysoptera</i>	pigfish
seaboard goby	<i>Gobiosoma ginsburgi</i>	<i>Paralichthys dentatus</i>	summer flounder
sheepshead	<i>Archosargus probatocephalus</i>	<i>Paralichthys oblongus</i>	fourspot flounder
sheepshead minnow	<i>Cyprinodon variegatus</i>	<i>Penaeus aztecus</i>	brown shrimp
silver hake	<i>Merluccius bilinearis</i>	<i>Penaeus duorarum</i>	pink shrimp
silver jenny	<i>Eucinostomus gula</i>	<i>Penaeus setiferus</i>	white shrimp
silver perch	<i>Bairdiella chrysoura</i>	<i>Peprilus alepidotus</i>	harvestfish
skilletfish	<i>Gobiesox strunmosus</i>	<i>Peprilus triacanthus</i>	butterfish
smallmouth flounder	<i>Etropus microstomus</i>	<i>Petromyzon marinus</i>	sea lamprey
smooth dogfish	<i>Mustelus canis</i>	<i>Pomatomus saltatrix</i>	bluefish
southern stingray	<i>Dasyatis americana</i>	<i>Prionotus carolinus</i>	northern searobin
spiny butterfly ray	<i>Gymnura altavela</i>	<i>Prionotus evolans</i>	striped searobin
spiny dogfish	<i>Squalus acanthias</i>	<i>Prionotus salmonicolor</i>	blackwing searobin
spot	<i>Leiostomus xanthurus</i>	<i>Prionotus tribulus</i>	bighead searobin
spottail pinfish	<i>Diplodus holbrooki</i>	<i>Pseudopleuronectes americanus</i>	winter flounder
spottail shiner	<i>Notropis hudsonius</i>	<i>Rachycentron canadum</i>	cobia
spotted hake	<i>Urophycis regia</i>	<i>Raja eglanteria</i>	clearnose skate
spotted seatrout	<i>Cynoscion nebulosus</i>	<i>Raja erinacea</i>	little skate
squid		<i>Scophthalmus aquosus</i>	windowpane
star drum	<i>Stellifer lanceolatus</i>	<i>Selene setapinnis</i>	Atlantic moonfish
striped anchovy	<i>Anchoa hepsetus</i>	<i>Selene vomer</i>	lookdown
striped bass	<i>Morone saxatilis</i>	<i>Sphoeroides maculatus</i>	northern puffer
striped burrfish	<i>Chilomycterus schoepfii</i>	<i>Sphyraena borealis</i>	northern sennet
striped cusk-eel	<i>Ophidion marginatum</i>	<i>Squalus acanthias</i>	spiny dogfish
striped killifish	<i>Fundulus majalis</i>	<i>Stellifer lanceolatus</i>	star drum
striped searobin	<i>Prionotus evolans</i>	<i>Stenotomus chrysops</i>	scup
summer flounder	<i>Paralichthys dentatus</i>	<i>Sympodus plagiusa</i>	blackcheek tonguefish
tautog	<i>Tautoga onitis</i>	<i>Syngnathus floridae</i>	dusky pipefish

Species Names - Common Name Order		Species Names - Latin Name Order	
Common Name	Latin Name	Latin Name	Common Name
tessellated darter	<i>Etheostoma olmstedi</i>	<i>Syngnathus fuscus</i>	northern pipefish
threadfin shad	<i>Dorosoma petenense</i>	<i>Synodus joetens</i>	inshore lizardfish
weakfish	<i>Cynoscion regalis</i>	<i>Tautoga onitis</i>	tautog
white catfish	<i>Ictalurus catus</i>	<i>Trichiurus lepturus</i>	Atlantic cutlassfish
white perch	<i>Morone americana</i>	<i>Trinectes maculatus</i>	hogchoker
white shrimp	<i>Penaeus setiferus</i>	<i>Urophycis chuss</i>	red hake
windowpane	<i>Scophthalmus aquosus</i>	<i>Urophycis regia</i>	spotted hake
winter flounder	<i>Pseudopleuronectes americanus</i>
