ACKNOWLEDGEMENTS

We wish to express our appreciation to Karen McDonald, CRC project manager, who was responsible for the initiation of this project as an EPA internship and obtained the necessary funds.

We would also like to thank Pam Owens for her splendid production work and Janice Meadows, assistant librarian, for reviewing the thesaurus and providing helpful suggestions.

The Chesapeake Bay Bibliography Thesaurus was prepared with funds from the Chesapeake Bay Program and Maryland Department of Natural Resources.

INTRODUCTION

The Chesapeake Bay Bibliography Thesaurus is a list of the keywords used in the Chesapeake Bay Bibliography (CBB), a comprehensive, ongoing database of 8,000 citations of publications on the science, history, and management of the Bay environment. The Thesaurus has been developed to link search terms and identify keywords relevant to a particular subject. The Thesaurus also includes: a geographical name list organized by rivers, counties, cities, bays, states, harbors, islands and "other"; and a taxonomic list of the specific organisms in the Thesaurus paired with their common names. We hope that this Thesaurus will improve both the indexing and retrieval of information from the CBB by guiding its users to the term(s) that most accurately describe the topics about which they seek information, as well as providing them with related terms that might also be useful in their search.

When the CBB was established in 1971, we selected the Water Resources Thesaurus, produced by the Office of Water Resources Research of the U.S. Department of the Interior, for our descriptor list. To transform this list into an appropriate vocabulary for the Chesapeake Bay, it was necessary to make two important changes. First, we deleted from the Thesaurus all animal and plant names not native to the Bay, such as Chinook salmon and Pacific fir tree, and all other terms not applicable to the Bay environment, such as icebergs and typhoons. Unrelated geographic names such as Oklahoma and Mississippi were also deleted. Next, we added to the Thesaurus the common names of predominant indigenous animals and wetlands plants as suggested by VIMS scientists, as well as the proper geographic names of local rivers, harbors, and so forth. Upon completion of these deletions and additions, we assigned a numerical code to each descriptor. Each citation added to the CBB was assigned up to ten descriptors by the indexer and then keypunched into the IBM 370/115 mainframe computer at the Virginia Institute of Marine Science.

In 1986 the CBB file was transferred to VIMS' upgraded computer, a Prime 9955, where it presently resides. Citations can now be input directly into the database by the indexer. We use FYI 3000 Plus software to manage and search the database on the Library's IBM PC, an OCLC M300 terminal. The original Thesaurus has been purged of unused terms and new keywords are added judiciously to accommodate topics such as acid rain, mitigation, and TBT (tributyltin) which are gaining prominence in the literature. Considerable care is taken when establishing new keywords to avoid creating terms which are inconsistent with those already in use in the CBB.

A library network to facilitate the distribution and exchange of Bay information is planned for the future. These libraries will serve as access points for searching the CBB. We hope the creation of this Thesaurus is a primary step toward better indexing and retrieval of Chesapeake Bay information.

GUIDE TO THE THESAURUS

The Chesapeake Bay Bibliography Thesaurus lists the keywords that constitute the authority list in bold-face type. These keywords have conventional notations to link related search terms and identify them to a particular subject.

USE reference term directs the user from a non-descriptor to the appropriate Chesapeake Bay Bibliography keyword.

MORPHOLOGY (COASTAL)
USE **GEOMORPHOLOGY**

UF (used for) is the reciprocal relationship to USE.

GEOMORPHOLOGY
UF **MORPHOLOGY (COASTAL)**

BT (broader term) and NT (narrower term) express hierarchical relationships and group keywords into a whole/part structure.

CRABS
BT **BENTHIC FAUNA**
CRUSTACEANS
INVERTEBRATES
NT **BLUE CRAB**

RT (related term) directs the user to alternate descriptors that may be more appropriate or necessary additions to the search statement.

CRABS
RT **CRAB INDUSTRY**

FETCH
RT **WAVES**
WIND VELOCITY
WINDS

SN (scope note) is used to explain applications unique to the Chesapeake Bay Bibliography system. It may define or proscribe the use of a term in specified circumstances.

WETLANDS
SN Includes legal aspects and legislation concerning all wetland types

Geographic names that are used as keywords in the Chesapeake Bay Bibliography are listed separately on pages 92-93.

Plants and animals are indexed by their common name in the Chesapeake Bay Bibliography. Their scientific name appears in the thesaurus directing the user to the appropriate common name keyword. In addition there is a taxonomic list of the specific organisms in the thesaurus paired with their common names on pages 94-95.

SEARCH TIPS

Users of this thesaurus should be aware of the basic indexing rules we have followed:

Be specific - Use the available keyword at the nearest level of specificity. For example a paper on striped bass will be indexed under the keyword **STRIPED BASS** while papers on other bass species will be indexed under the keywords **BASSES** or **SEA BASSES**.

Combine Keywords - Use all relevant general keywords with more specific keywords to assure complete coverage of a broad subject area. For example to conduct a search on the seafood industry it will be necessary to combine the keywords **SEAFOOD INDUSTRY, CLAM INDUSTRY, CRAB INDUSTRY, FINFISH INDUSTRY, OYSTER INDUSTRY, AND SOFT-SHELL CRAB INDUSTRY**.
