DECLARATION

I declare that this thesis entitle "Enhancement Performance of Split Ring Resonator Structure on Microstrip Patch Antenna" is the result of my own research except as cited in the references. The thesis has not been accepted for any degree and is not concurrently submitted in candidature of any other degree.

Date :í í í í í í í í

DEDICATION

Thanks to Allah S.W.T and Rasulullah S.A.W. Thanks also to my beloved mother, Puan Asmah bt Abu, my father, Mej (B) Hassan b. Mahadi and to all my siblings.

ABSTRACT

Metamaterial is a type of artificial structure that is not found in the nature. This structure has become an interest among many due to its extraordinary response to electromagnetic waves. The split ring resonator is an example of a metamaterial structure, which has the potential to improve the performances of components in microwaves without changing the materials or with additional radiators. First, the possibility to reduce the size of patch antenna while maintaining the acceptable performance at 2.4 GHz with various split ring resonator configurations studied. Next, the ability to produce multi bandwidth performance for Minkowski Island antenna with Minkowski Island split ring resonator had performed. The antenna had designed and simulated with Microwave CST software. Then, the proposed antenna had been fabricated and measured. Meanwhile, the Minkowski Island split ring resonator possessed the ability to reduce the overall physical size of Minkowski patch antenna up to 75.6 % compare with basic rectangular antenna. Then, the Minkowski Island split ring resonator could create multiband resonant frequency at 2.4 GHz, 3.5 GHz, and 5.2 GHz for the Minkowski Island antenna with return loss of - 21.945 dB, - 17.154 dB and - 16.536 dB with gain of 0.874 dB, 1.410 dB and 2.940 dB, respectively. Besides, the resonant frequency could also be controlled by using different combinations size and location of Minkowski Island split ring resonators. The overall size of the antenna still could be maintained although additional split ring resonators were used. Therefore, the multiband system with compact design can be realized to improve the mobility of wireless communication system devices.

ABSTRAK

Metamaterial adalah struktur buatan yang tidak dapat ditemui secara semula jadi. Struktur ini menjadi subjek yang penting kerana ianya memberi kesan yang luar biasa terhadap sistem gelombang elektromagnet. Resonator cincin terbelah adalah contoh struktur metamaterial yang mempunyai potensi untuk meningkatkan prestasi komponen gelombang mikro tanpa mengubah bahan atau dengan menambah radiatornya. Pertama, kajian mengenai kemungkinan resonator cincin terbelah untuk mengurangkan saiz antena tampalan dengan mengekalkan prestasi yang boleh diterima pada 2.4 GHz dijalankan. Kemudian, kebolehan untuk penghasilan pelbagai lebarjalur untuk antena Minkowski Island menggunakan resonator cincin terbelah berbentuk Pulau Minkowski telah dilaksanakan. Antena ini direkabentuk dan disimulasikan dengan menggunakan perisian Microwave CST. Kemudian, antena yang dicadangkan itu difabrikasi dan diukur prestasinya. Selain itu, resonator cincin terbelah berkembar berbentuk Pulau Minkowski mampu untuk mengecilkan saiz fizikal keseluruhan antena Minkowski sehingga 75.6 % berbanding antena segi empat tepat biasa. Kemudian, resonator cincin terbelah berbentuk Pulau Minkowski boleh menghasilkan pelbagai jalur frekuensi resonan pada 2.4 GHz, 3.5 GHz dan 5.2 GHz untuk antena Pulau Minkowski dengan kehilangan balik - 21.945 dB, - 17.154 dB dan - 16.536 dB dan dengan kekuatan 0.874 dB, 1.410 dB dan 2.940 dB. Di samping itu, frekuensi resonan juga boleh dikawal dengan menggunakan kombinasi resonator cincin terbelah berbentuk Pulau Minkowski yang berbeza saiz dan lokasi. Ukuran keseluruhan antena masih dapat dikekalkan meskipun jumlah resonator cincin terbelah ditambah jumlahnya. Oleh itu, sistem pelbagai frekuensi dengan reka bentuk kompak dapat diwujudkan untuk meningkatkan mobiliti peranti sistem komunikasi tanpa wayar.

ACKNOWLEDGEMENT

In preparing this thesis, I was in contact with many people, researchers, academicians and practitioners. They have contributed towards my understanding and thought. In particular, I wish to express my sincere appreciation to my main thesis supervisor, Professor Madya Dr. Badrul Hisham Ahmad, for encouragement, guidance critics and friendship. I am also very thankful to my co-supervisors Professor Madya Dr. Abdul Rani Othman for their guidance, advices and motivation. I also would like to express my deep and sincere thanks to Dr. Mohamad Zoinol Abidin Abd Aziz and Dr. Mohd Ridhuan Ahmad for his guidance, support and encouragement. His door has always been opened and I could always talk to them no matter how busy they were. I am also wanted to say thanks to Prof Madya Dr. Fareq Malek from UniMAP for his helps. Without their continued support and interest, this thesis would not have been same as presented here. I am also indebted to government of Malaysia for funding, my UTeM also deserve special thanks for their assistance in supplying the relevant literatures. My fellow postgraduate students should also be recognized for their support ó Dr. Azwan, Saiful, Ammar, Jitvinder, Sam, Ariffin, Khairy Zahari, Mohan, En. Sani, Khairy Ismail, Zaki, Hafize, Fadhli, Hafiz, Haffiz, Hairi, Thoriq, Hanif, Zuhair, Syafiq, Yusof, Thailis, Hasbullah, Ong and Mizan. My sincere appreciation also extends to all my colleagues and others who have provided assistance at various occasions. Their views and tips are useful indeed. Unfortunately, it is not possible to list all of them in this limited space. I am grateful to all my family members.

	(a) front view of Minkowski shape, and (b) side with three layers of substrate and copper conductor	
3.21	The second iteration of Minkowski patch antenna, Design Antenna Rb (a) front view of Minkowski shape, and (b) side with three layers of substrate and copper conductor	90
3.22	The second iteration Minkowski patch antenna with quadruple P-spiral SRR structure, (a) Minkowski patch antenna with 1-N of quadruple P-spiral SRR, Design Antenna <i>Rb1-v</i> , (b) Minkowski patch antenna with 2-N of quadruple P-spiral SRR, Design Antenna <i>Rb3-v</i> and (c) Minkowski patch antenna with 3-N of quadruple P-spiral SRR, Design Antenna <i>Rb3-v</i>	90
3.23	The Minkowski microstrip patch antenna, Design Antenna <i>Sa</i> , (a) front view of Minkowski Island shape, and (b) side with three layers of substrate and copper conductor	91
3.24	The Minkowski patch antenna with Minkowski Island SRR structure (a) front view of Minkowski Island shape with 4-N Minkowski Island SRR, Design Antenna <i>Sb3-vi</i> , (b) front view of Minkowski Island shape with 6-N Minkowski Island SRR, Design Antenna <i>Sb3-vi</i> , and (c) side with three layers of substrate and copper conductor	92
3.25	The Minkowski Island patch antenna with Minkowski Island SRR structure, Design Antenna <i>Sb3-vi</i>	93
3.26	The fabrication process of patch antenna	94
3.27	Ultra Violet exposure process, (a) printed film using CorelDraw software), (b) Ultra Violet exposure machine	95
