BRAIN LESION SEGMENTATION AND CLASSIFICATION USING DIFFUSION-WEIGHTED IMAGING (DWI)

Ayuni Fateeha Binti Muda

Master of Science in Electronic Engineering

2016

**BRAIN LESION SEGMENTATION AND CLASSIFICATION USING
DIFFUSION-WEIGHTED IMAGING (DWI)**

AYUNI FATEEHA BINTI MUDA

**A thesis submitted
in fulfillment of the requirements for the degree of Master of
Science in Electronic Engineering**

Faculty of Electronic and Computer Engineering

UNIVERSITI TEKNIKAL MALAYSIA MELAKA

2016

DECLARATION

I declare that this thesis entitle “Brain Lesion Segmentation And Classification Using Diffusion-Weighted Imaging (DWI)” is the result of my own research except as cited in the references. The thesis has not been accepted for any degree and is not concurrently submitted in the candidature of any other degree.

DEDICATION

To my beloved family especially my husband; Mohd Hafiz Bin Sulaiman ,my mother;
Rohani Binti Abd Rahman, my late father; Muda Bin Jusoh, my father and mother in law;
Saliah Binti Ghani and Sulaiman Bin Liudin and my siblings; Norliza Binti Muda, Mohd
Nazroi Shukri, Normuslim, Nor Armiza, Adly Hisham, Mohd Aiman and Aishah
Masturah, Nurul Asyikin, Mohd Yazid and Nurul Amirah Nadhira.

ABSTRACT

Research and development of brain detection and diagnosis system for brain disorder based on Magnetic Resonance Imaging (MRI) have become one of the most common interest in the past few years. Out of various MRI techniques, Diffusion-Weighted Imaging (DWI) remains the most accurate technique for early detection and discrimination of several brain lesions such as stroke. This study proposed the image analysis technique for automatically segmenting and classifying abnormal lesion structures from DWI. Four lesions namely acute stroke, chronic stroke, solid tumor and necrosis were analyzed. The proposed analysis framework were pre-processing, segmentation, features extraction and classification. Four different segmentation techniques were proposed based on Thresholding with Morphological Operation (TMO), Fuzzy C-Means (FCM), Fuzzy C-Means with Active Contour (FCMAC) and Fuzzy C-Means with Correlation Template (FCMCT) to segment the lesion's region. Next, the statistical parameters from spatial and wavelet transforms were extracted from the Region of Interest (ROI) as features. These features were classified using a rule-based classifier for automatic classification. The results indicate that FCMCT offered the best performance for Jaccard Index, Dice Index, False Positive Rate and False Negative Rate which were 0.6, 0.73, 0.19 and 0.2 respectively. The overall accuracy, sensitivity and specificity for the classification were 89 %, 86 % and 96 %. In conclusion, the proposed hybrid analysis has the potential to be explored as a computer-aided tool to detect and diagnose of human brain lesion.

ABSTRAK

Sejak beberapa tahun ini, pembangunan dan penyelidikan tentang pengesanan dan diagnosis otak untuk kecacatan otak berdasarkan pengimejan magnetik resonan (MRI) telah menjadi salah satu kepentingan. Salah satu diantara teknik MRI ialah Pengimejan magnetik resonan pemberat-resapan (DWI) kekal teknik yang paling tepat bagi pengesanan awal dan diskriminasi beberapa lesi otak seperti strok. Kajian ini mencadangkan satu teknik untuk mengsegmenkan dan mengelaskan struktur lesi yang tidak normal daripada DWI. Empat lesi yang dikenali lesi tumor, strok akut, strok kronik dan nekrosis telah dianalisis. Analisis rangka kerja yang dicadangkan adalah pra-pemproses, pengsegmenan, pengekstrakan ciri dan pengelasan. Empat teknik pengsegmenan yang berbeza telah dicadangkan berdasarkan pengsegmenan iaitu teknik ambang dengan operasi morfologi (TMO), fuzzy C-means (FCM), fuzzy C-means dengan kontur aktif (FCMAC) dan fuzzy C-means dengan template kolerasi (FCMCT) untuk mengsegmen kawasan lesi. Kemudian, parameter statistik daripada ruang dan ubahan wavelet diekstrak daripada kawasan yang terpenting (ROI) sebagai ciri-ciri. Ciri-ciri ini telah dikelaskan dengan menggunakan pengelas yang peraturan untuk pengelasan automatik. Keputusan menunjukkan bahawa FCMCT mempunyai prestasi yang terbaik untuk segmentasi berdasarkan Jaccard indeks, Dice Indeks, kadar positif salah (FPR) dan kadar negatif salah (FNR) masing –masing iaitu 0.6, 0.73, 0.19 dan 0.2. Keseluruhan kejituan, sensitiviti dan spesifisiti untuk pengelasan adalah 89 %, 86 % dan 96 %. Sebagai kesimpulannya, analisis hybrid yang dicadangkan mempunyai potensi untuk diterokai sebagai alat bantuan komputer untuk mengesan dan mengdiagnosis lesi otak manusia.

ACKNOWLEDGEMENT

First and foremost, I would like to give my highest gratitude to the Almighty God for His blessings that I have now completed my Master of Science in Electronic Engineering. I would like to express my highly appreciation to my main supervisor Dr. Norhashimah binti Mohd Saad who had guided, motivated me through this research and her advice had greatly improved my thesis writing. I also would like to thank my co-supervisor, Dr Low Yin Fen for her advices during the duration of my research. They have helped and guided me very well regarding useful informations and research techniques to complete this thesis. I want to thank my lecturers; especially Mr.Sani Irwan bin Md. Salim for his advice and motivation throughout this study. My deep gratitude also goes to Miss Nazreen binti Waeleh in securing grants to support the continuation of my research.

I also thank Universiti Kebangsaan Malaysia Medical Centre (UKMMC) for collaborating in medical knowledge and providing dataset for this research work. Special thanks to neuroradiology Associate Professor Dr. Ahmad Sobri bin Muda as collaborator for this research.

Special dedications also to the Ministry of Higher Education Malaysia for funding my research project under Research Grant RAGS (RAGS/2013/FKEKK/SG04/01/B00037) and the authority of University Teknikal Malaysia Melaka (UTeM), especially to the Faculty of Electronic and Computer Engineering (FKEKK) for the university short term research (PJP)

grant (PJP/2013/FKEKK (4B)/S01142). FKEKK had also provided useful and conducive facilities for me to conduct my research works.

Furthermore, I would like to convey my grateful appreciations to my dear husband, Mohd Hafiz bin Sulaiman for his moral support and sacrifice. I want to thank my friend in UTeM especially to Muhammad Zuhair Bolqiah bin Edris who has teach and help me to complete this research.

Last but not least, I would like to extend my gratitudes to my late father; Muda bin Jusoh, my mother; Rohani binti Abd Rahman; my parent-in law; Sulaiman bin Liudin and Saliah Binti Ghani, my siblings, and my friends for their encouragement, love and motivations throughout my whole journey. Once again, thank you so much.
