Deng, S. (2018). A step forward: adding linked data vocabularies to digital repositories. Florida Library Association 2018 Annual Conference. May 24, 2018, Orlando, FL.

Linked Data Basics

Linked data:

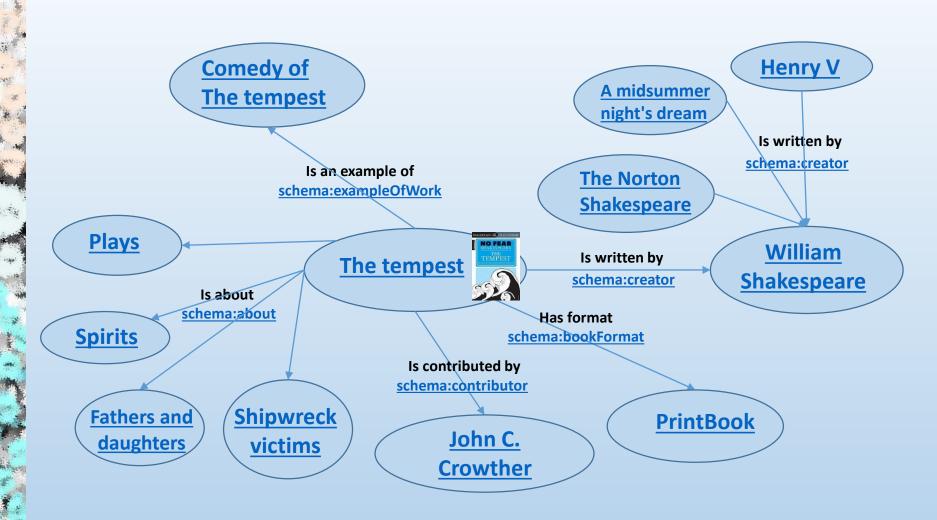

- "A term used to describe a recommended best practice for exposing, sharing, and connecting pieces of data, information, and knowledge on the Semantic Web using URIs and RDF."
 - -Wikipedia

- Resource Description Framework (RDF): Represent information in triples
 - Subject: a resource, identified with a URI
 - Predicate: specification of the relationship
 - Object: a resource the subject is related to

Linked Data Basics

- The Four Design Principles of Linked Data
 - Use Uniform Resource Identifiers (URIs) as names for things.
 - Use HTTP URIs so that people can look up those names.
 - When someone looks up a URI, provide useful information, using the standards (RDF, SPARQL).
 - Include links to other URIs so that they can discover more things.
 - Tim Berners-Lee. 2006. https://www.w3.org/DesignIssues/LinkedData.html
- URIs for naming things, RDF for describing things, SPARQL for querying data; link to other URIs to find more things.

Linked Data: An Example

^{*}Based on information from worldcat.org

Linked Open Data Building Blocks

- The LOD Data Model: RDF triples
- Content Rules: relies on external vocabularies and ontologies
- Metadata schema
 - RDF Schema
 - Vocabulary Building Blocks: SKOS, OWL
 - Open Archives Initiative Object Reuse and Exchange (OAI-ORE)
- Serializations of LOD
 - RDF Notation-3/Ns, Turtle, N-Triples; RDFa; JSON-LD
- Exchanging LOD
 - SPARQL
- Mitchell, Erik T. Building Blocks of Linked Open Data in Libraries.
 Library Technology Reports (vol. 49, no. 5)

Five Star-schema of Linked Open Data (LOD)

- Five star-schema of Linked Open Data (Tim Berners-Lee)
 - ★ Available on the web (whatever format) but with an open licence, to be Open Data
 - ★★ Available as machine-readable structured data (e.g. excel instead of image scan of a table)
 - ★★★ as (2) plus non-proprietary format (e.g. CSV instead of excel)
 - ★★★★ All the above plus, Use open standards from W3C (RDF and SPARQL) to identify things, so that people can point at your stuff
 - ★★★★★ All the above, plus: Link your data to other people's data to provide context

 Metadata Refinery,
 transforms
 CONTENTdm
 metadata to Linked
 Data, 2016. Not yet
 scalable. (Washburn
 et al. 2016)

A UIUC Experiment http://imagesearch-test1.library.illinois.edu/cdm/ref/collection/motley-new/id/599
Project Site http://publish.illinois.edu/linkedspcollections/

Omeka

- Open source web publishing platform. Supports Dublin Core.
 Can export METS, dc-rdf, JSON etc.
- Ozmeka (plug-ins)/ Omeka linked data

DSpace

- **DSpace Linked Data support** spans all three Layers: "the storage layer with **a triple store**, the business logic with classes to **convert** stored contents into RDF, and the application layer with a module to **publish** RDF serializations."
 - Donohue. Linked (Open) Data.

(https://wiki.duraspace.org/display/DSDOC6x/Linked+%28Open%29+Data)

Digital Commons

Allow to add extra fields for links (not RDF)

Preparing for Linked Data

- Include links (e.g., id.loc.gov, viaf.org) in added additional fields for author, advisor, department names etc.;
- Data (in spreadsheet) cleanup and reconciliation using OpenRefine
 - Name review can be tricky and time-consuming: Google, Wikipedia, obituary, university and departmental websites, publications, CVs...

Adding Linked Data Vocabularies to UCF Digital Repositories

- Adding LOD Links to Fields in Digital Repositories
 - Authors/Creators
 - Contributors, e.g., thesis advisors
 - Corporate names, e.g., university, college and departmental names
 - Subjects
 - Person identifiers

OpenRefine

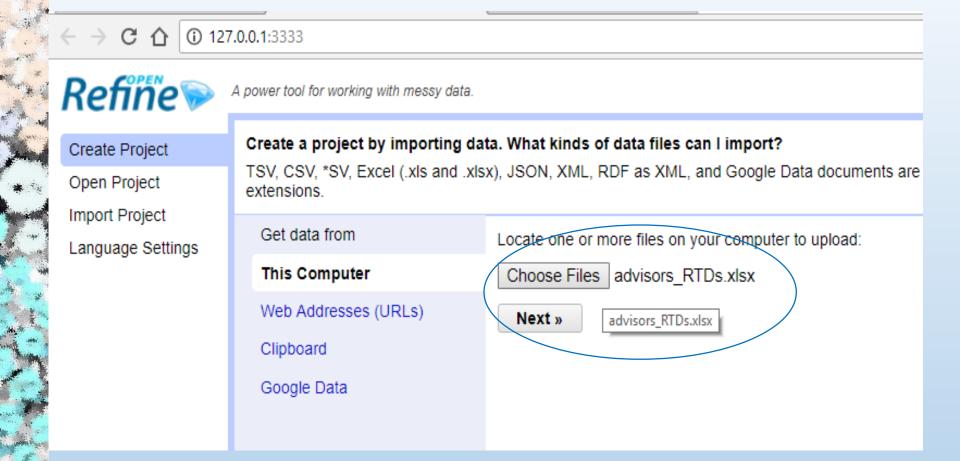

• Download and installation http://openrefine.org/download.html

Documentation

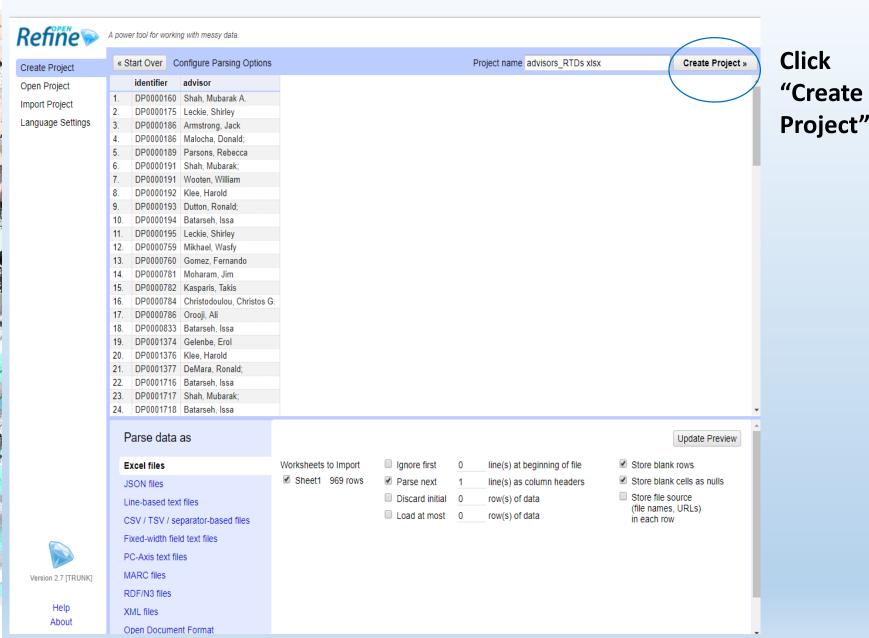

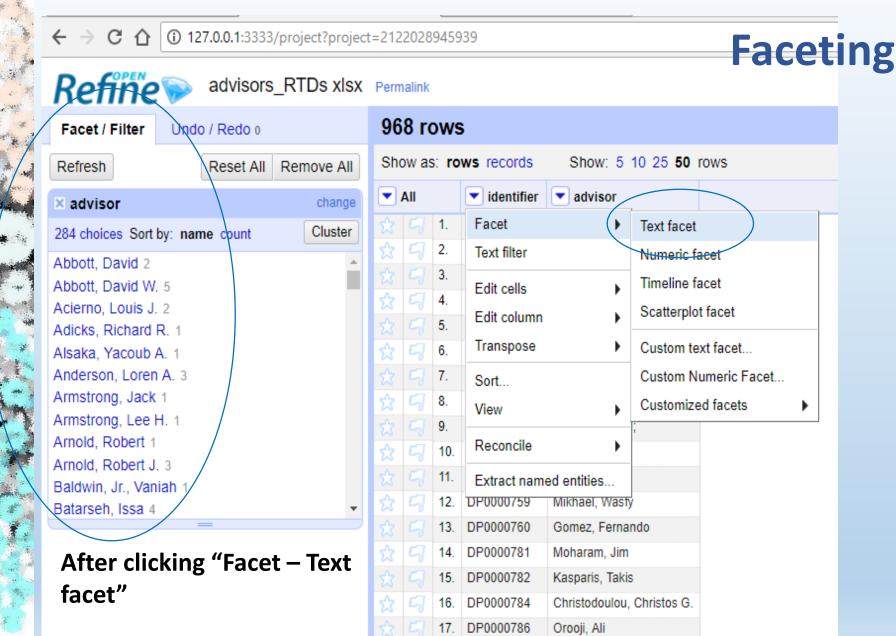

- Features
 - Import

Subject links display together

(*can add more values)

* Use "|" or other dividers to separate subjects

Adding LOD Links to IR Records

Violence is Not a Virus, but it is Transmitted

Roberto Hugh Potter, University of Central Florida

Description

The University of Central Florida (UCF) Forum is a weekly series of opinion columns presented by the UCF News & Information. The columns are the opinions of the writers, who serve on the UCF Forum panel of faculty members, staffers and students for a year. A new column is posted each Wednesday at UCF Today and then broadcast between 7:50 and 8 a.m. Sunday on WUCF-FM (89.9).

Publication Date

9-5-2012

Keywords

Violence; Mass shooting; Firearms; Gun violence; Assailant; Firearm; Criminal behavior; Criminal violence: Campus violence

Introduction

Recent mass shootings have again brought out the "violence is a disease" crowd. The thinking is that if we reduce the availability of firearms, we will decrease violence.

Subjects

Violence: Mass shootings; Firearms; Criminal behavior

Other Possibilities

Augment Data with Reconciliation Services

- Reconcile genre values to AAT terms
- Reconcile places to GeoNames
- Reconcile ORCID...

Reconcile Against Local Vocabularies

- reconciliation-csv
 - http://okfnlabs.org/reconcile-csv/
 - Possibilities: Reconcile various fields in OpenRefine against local controlled term lists, e.g., medals, ranks for Veterans Oral History

Next Steps

- Keep adding more LOD links to personal names, subjects and college/department names to digital collections;
- Continue to explore OpenRefine and related services to enrich metadata and improve workflow;
- Promote, explore and link authors/researchers to personal identifiers.
