Supplementary Material: Synchronization patterns in modular neuronal networks: a case study of *C. elegans*

1 LEVEL OF SYNCHRONIZATION

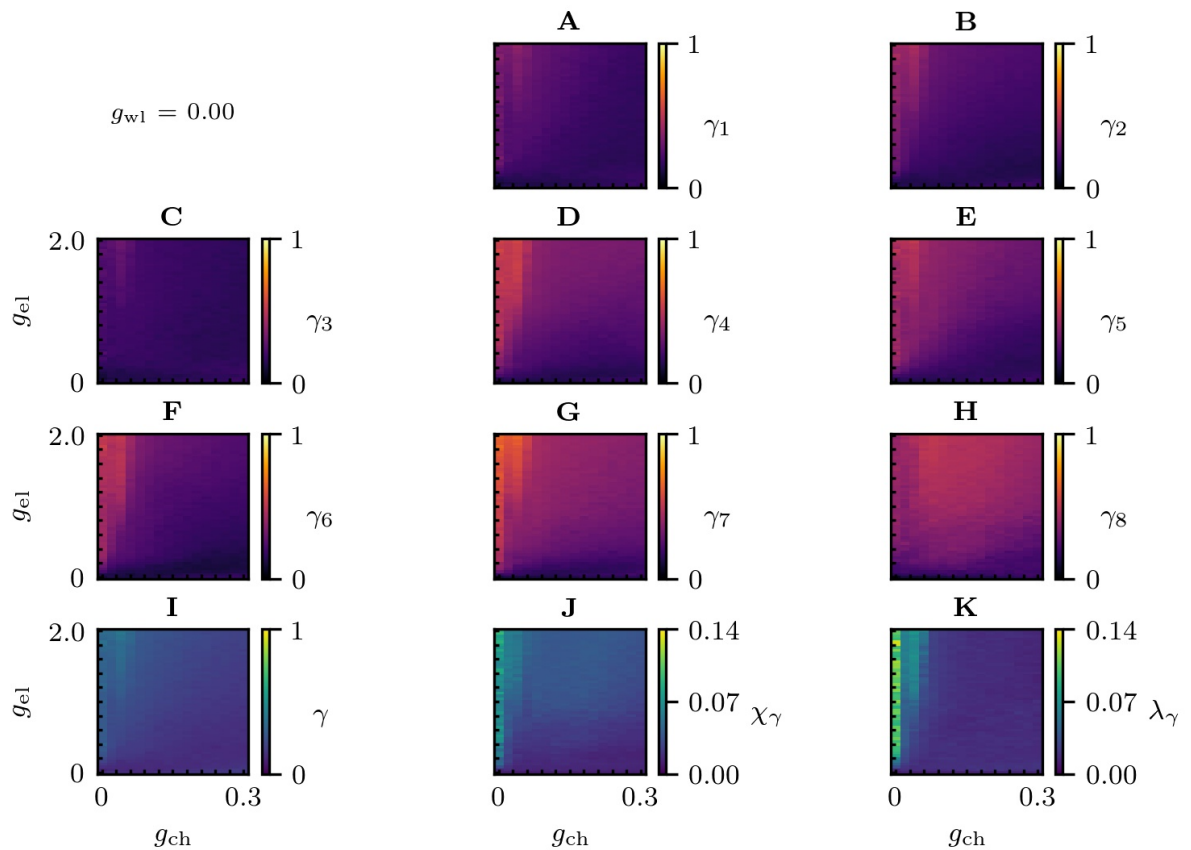

Figure S1. Synchronization parameter scans of the Multilayer-Louvain network. Absence of wireless coupling ($g_{wl} = 0$) for different electrical and chemical couplings: (A) - (H) the level of synchronization for all communities $\gamma_1 - \gamma_6$, (I) - (K) the global level of synchronization of the whole network γ , the chimera-like index χ_γ and the metastability index λ_γ . The system parameters are the same as in figure 6 (A), (B), (C)

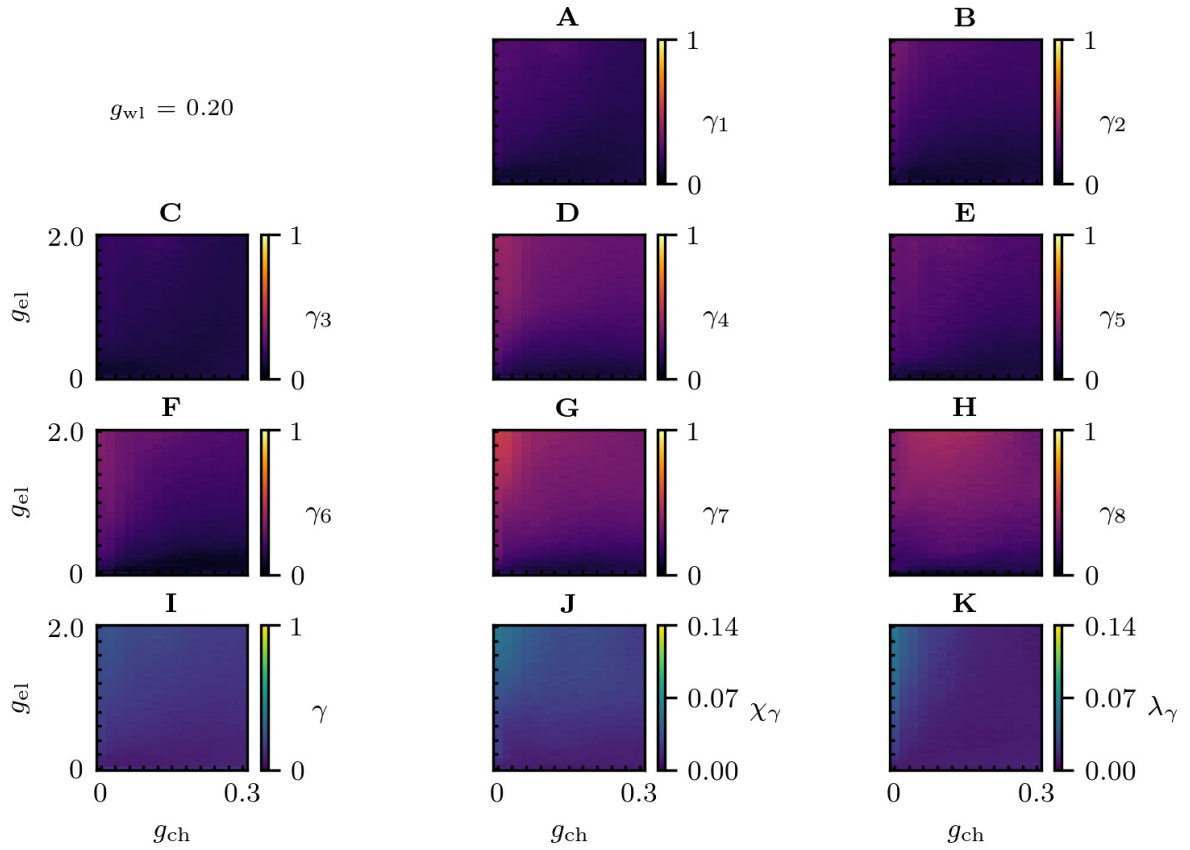

Figure S2. Synchronization parameter scans of the Multilayer-Louvain network. Presence of wireless coupling ($g_{wl} = 0.20$) for different electrical and chemical couplings: (A) - (H) the level of synchronization for all communities $\gamma_1 - \gamma_6$, (I) - (K) the global level of synchronization of the whole network γ , the chimera-like index χ_γ and the metastability index λ_γ . The system parameters are the same as in figure 6 (D), (E), (F)

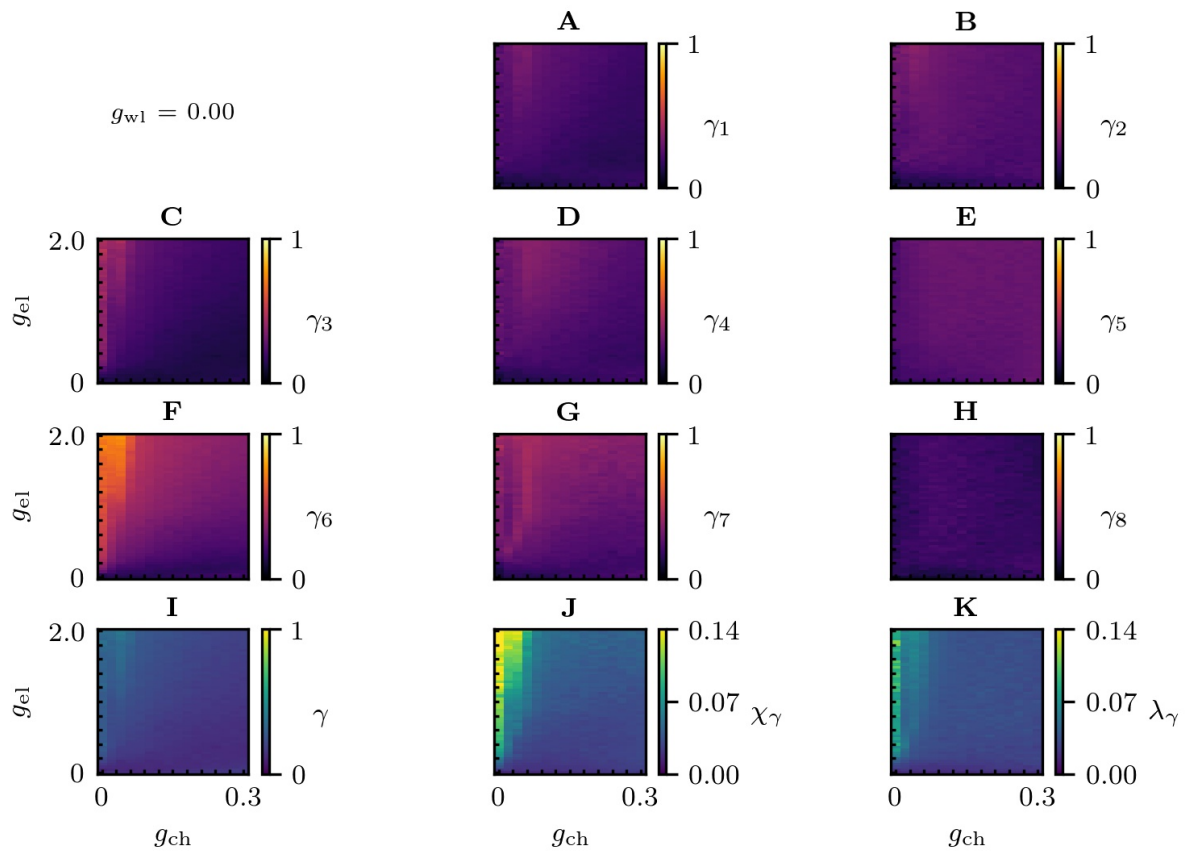

Figure S3. Synchronization parameter scans of the dynamical correlation-based network. Absence of wireless coupling ($g_{wl} = 0$) for different electrical and chemical couplings: **(A) - (H)** the level of synchronization for all communities $\gamma_1 - \gamma_6$, **(I) - (K)** the global level of synchronization of the whole network γ , the chimera-like index χ_γ and the metastability index λ_γ . The system parameters are the same as in **figure 9 (A), (B), (C)**

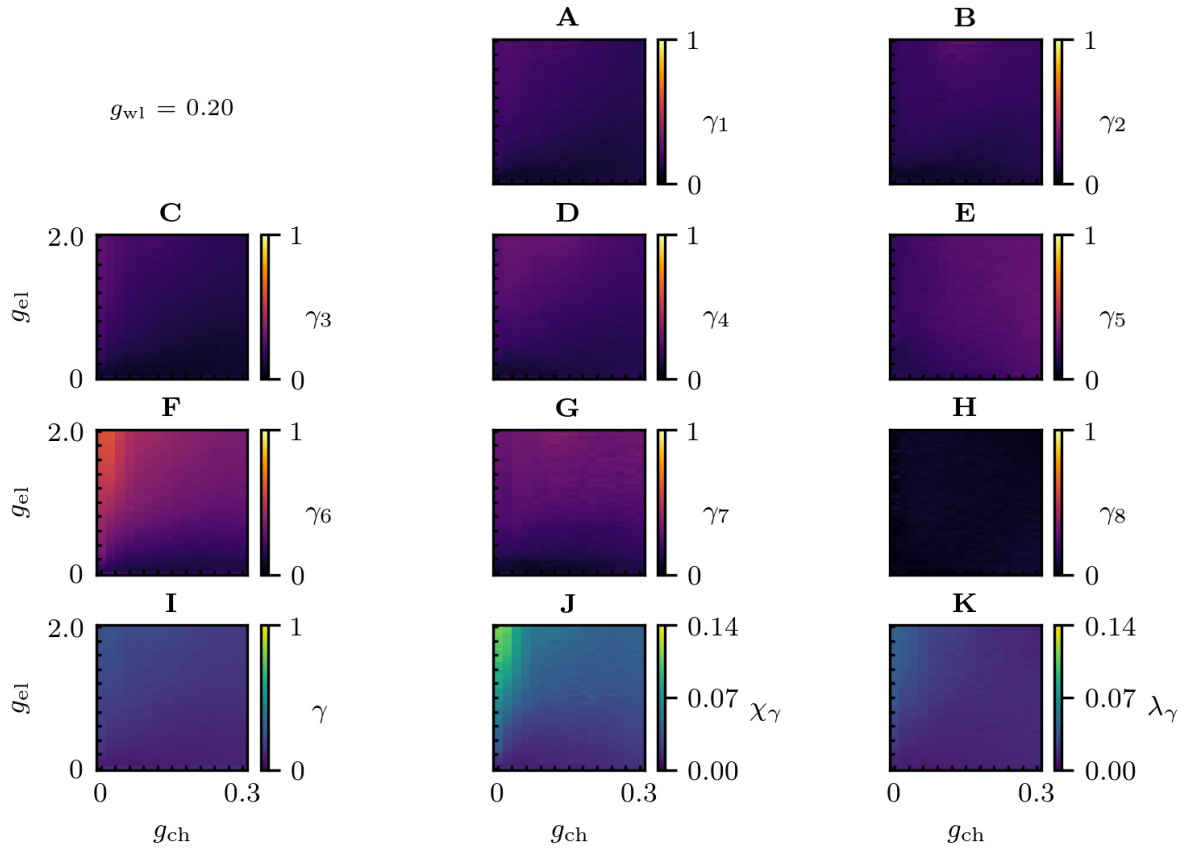

Figure S4. Synchronization parameter scans of the dynamical correlation-based network. Presence of wireless coupling ($g_{wl} = 0.20$) for different electrical and chemical couplings: (A) - (H) the level of synchronization for all communities $\gamma_1 - \gamma_6$, (I) - (K) the global level of synchronization of the whole network γ , the chimera-like index χ_γ and the metastability index λ_γ . The system parameters are the same as in figure 9 (D), (E), (F)
