“Parameter variability of undrained shear strength and strain using a database of reconstituted soil tests” by M. E. W. Beesley and P. J. Vardanega

Online Supplement

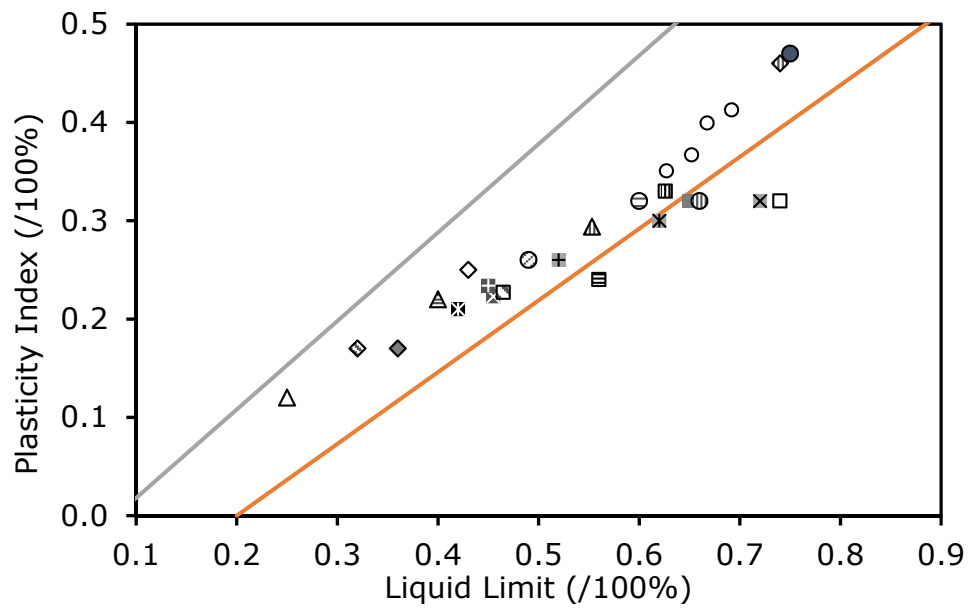

Figure S1. Soils in the database plotted on the Casagrande Chart (A-line (orange) and U-line (grey) shown)

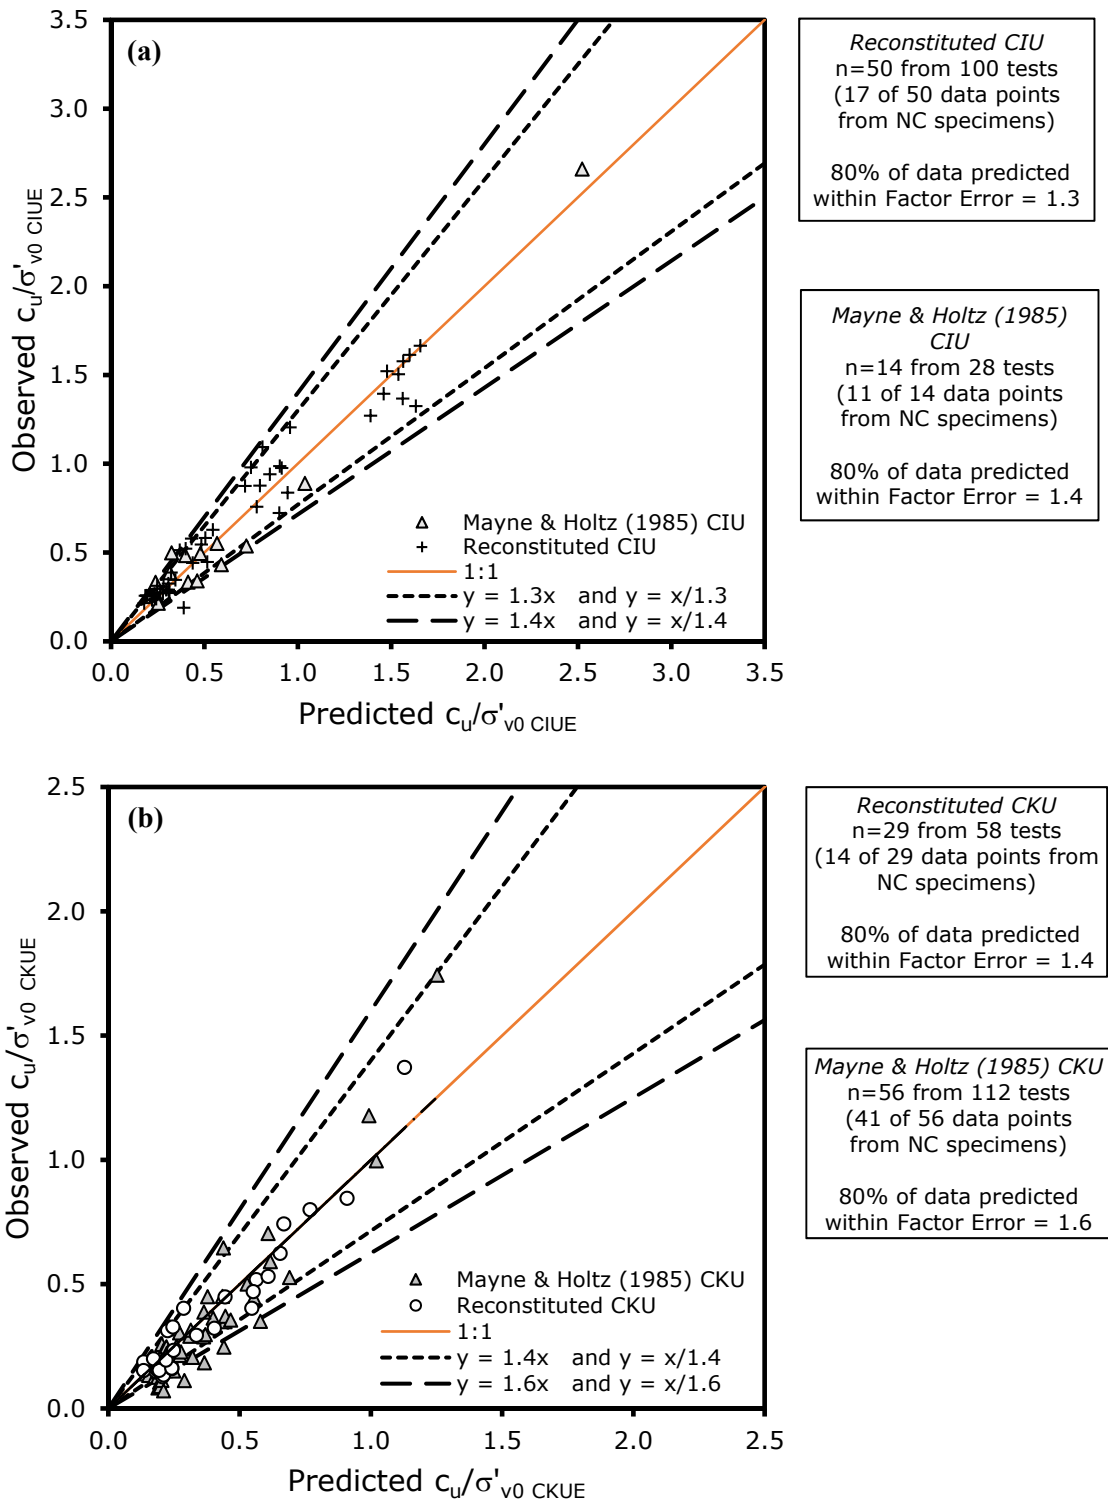

Figure S2. Comparison of observed and predicted values of c_u/σ'_{v0} CIUE and c_u/σ'_{v0} CKUE predicted from a triaxial compression test: **(a)** CIU triaxial tests and **(b)** CKU triaxial tests

Reference:

Mayne, P. W. and Holtz, R. D., 1985. "Effect of principal stress rotation on clay strength". In: *Proceedings of the 11th International Conference on Soil Mechanics and Foundation Engineering, San Francisco/ 12-16 August 1985*, (Publications Committee of XI ICSMFE, Eds.) A.A. Balkema, Rotterdam, Netherlands, vol. 2, pp. 579-582.

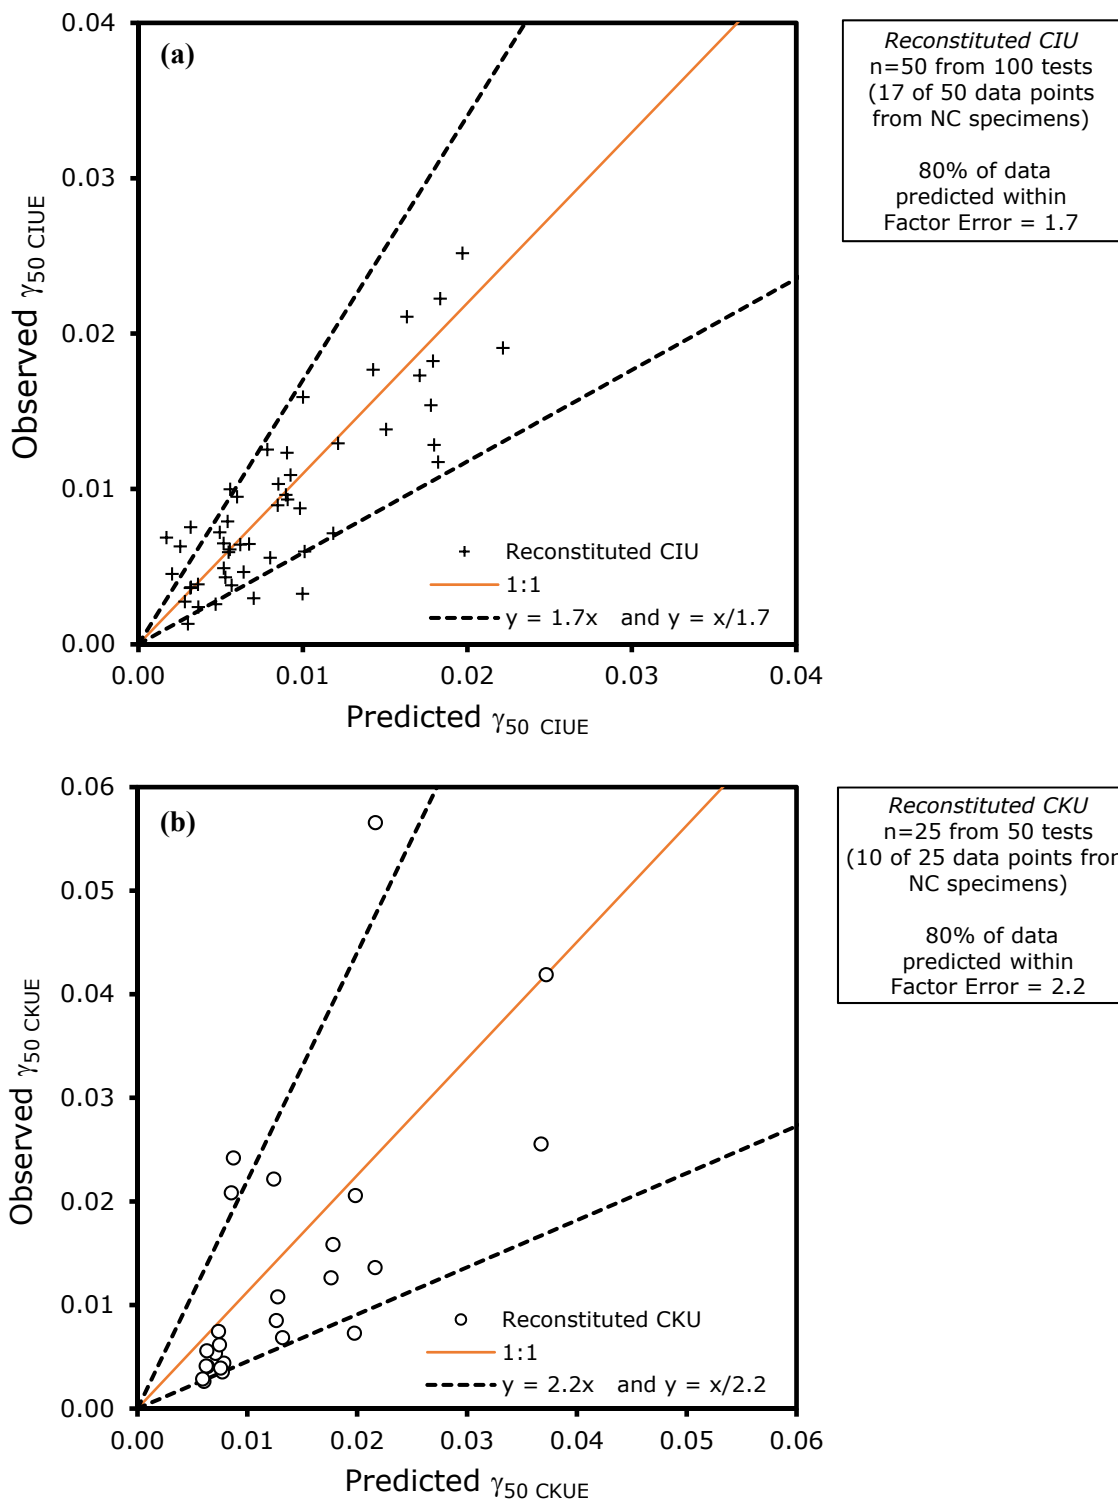

Figure S3. Comparison of observed and predicted values of $\gamma_{50 \text{ CIUE}}$ and $\gamma_{50 \text{ CKUE}}$ predicted from a triaxial compression test: **(a)** CIU triaxial tests and **(b)** CKU triaxial tests

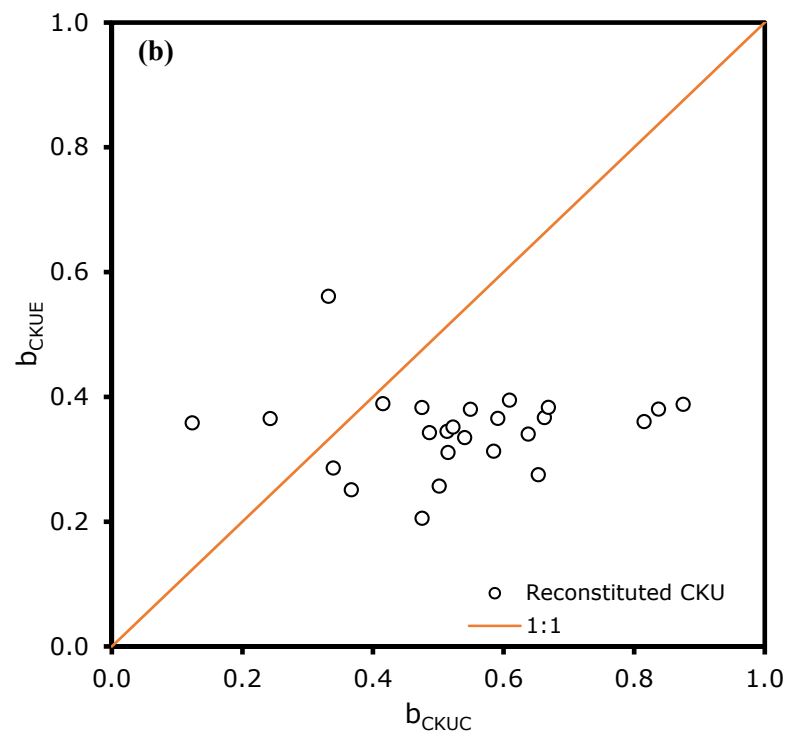

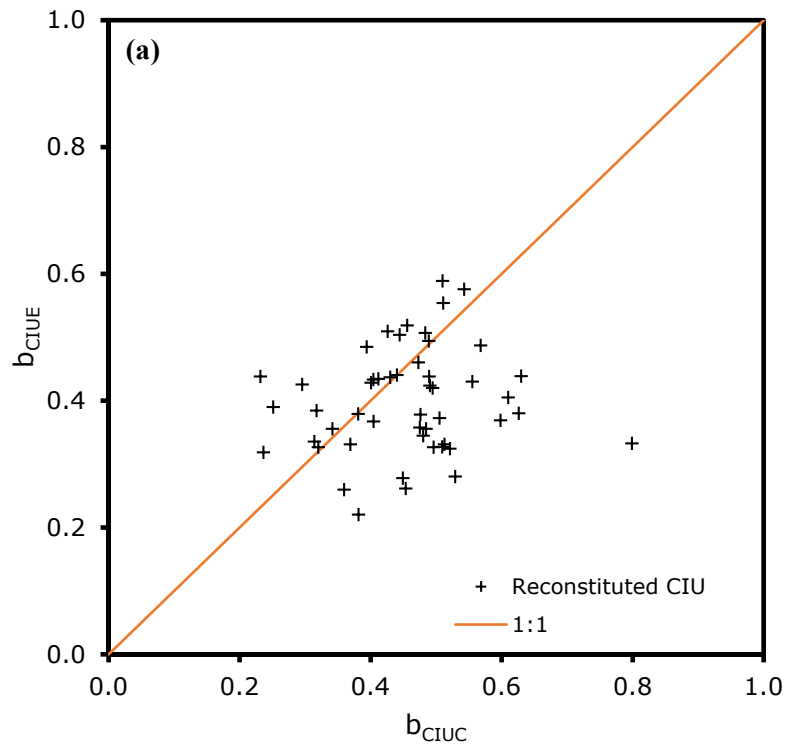

Figure S4. Comparison of non-linearity parameter in extension and compression **(a)** for CIU tests and **(b)** for CKU tests

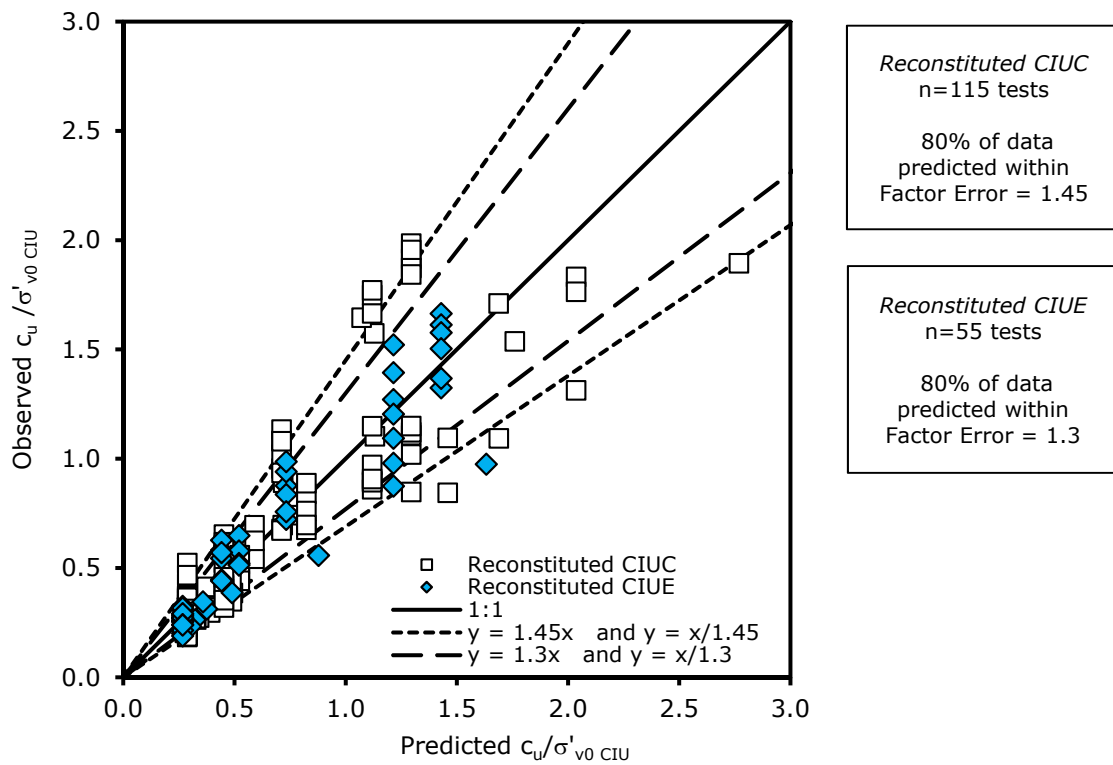

Figure S5. Comparison of observed and predicted values of $c_u / \sigma'_{v0\text{ CIUC}}$ (Equations 9 and 10) tested by CIUC or CIUE

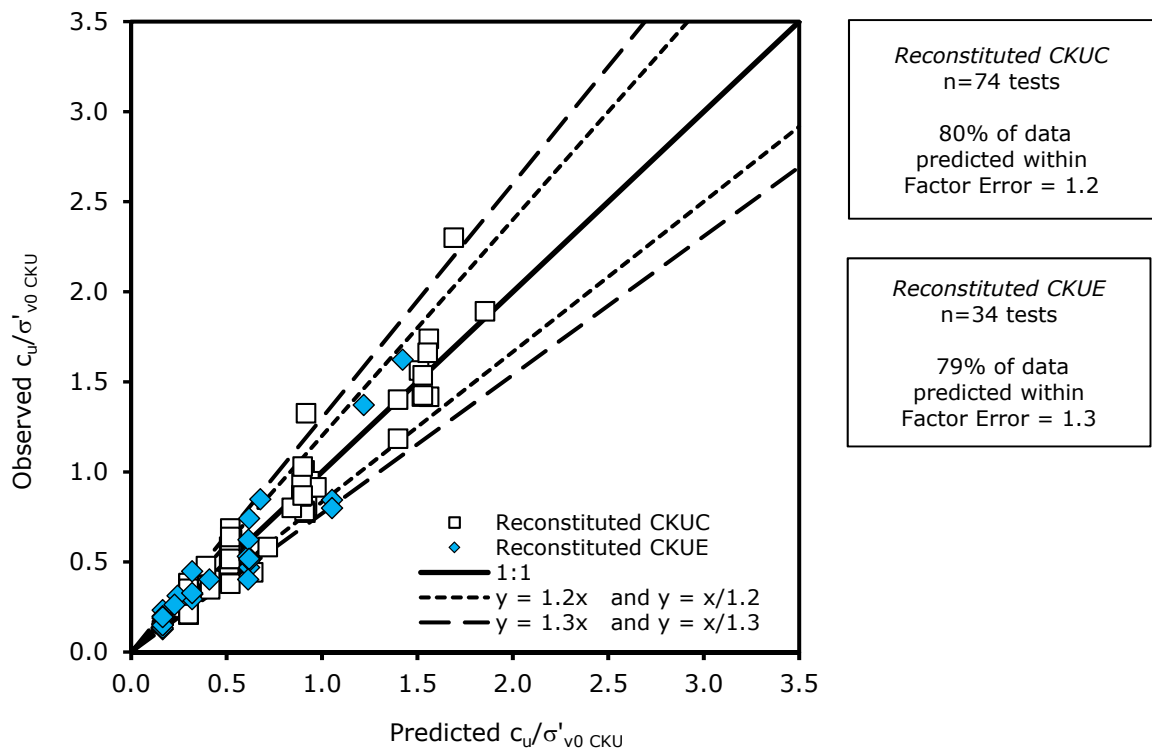

Figure S6. Comparison of observed and predicted values of $c_u / \sigma'_{v0\text{ CKUC}}$ (Equations 11 and 12) tested by CKUC or CKUE

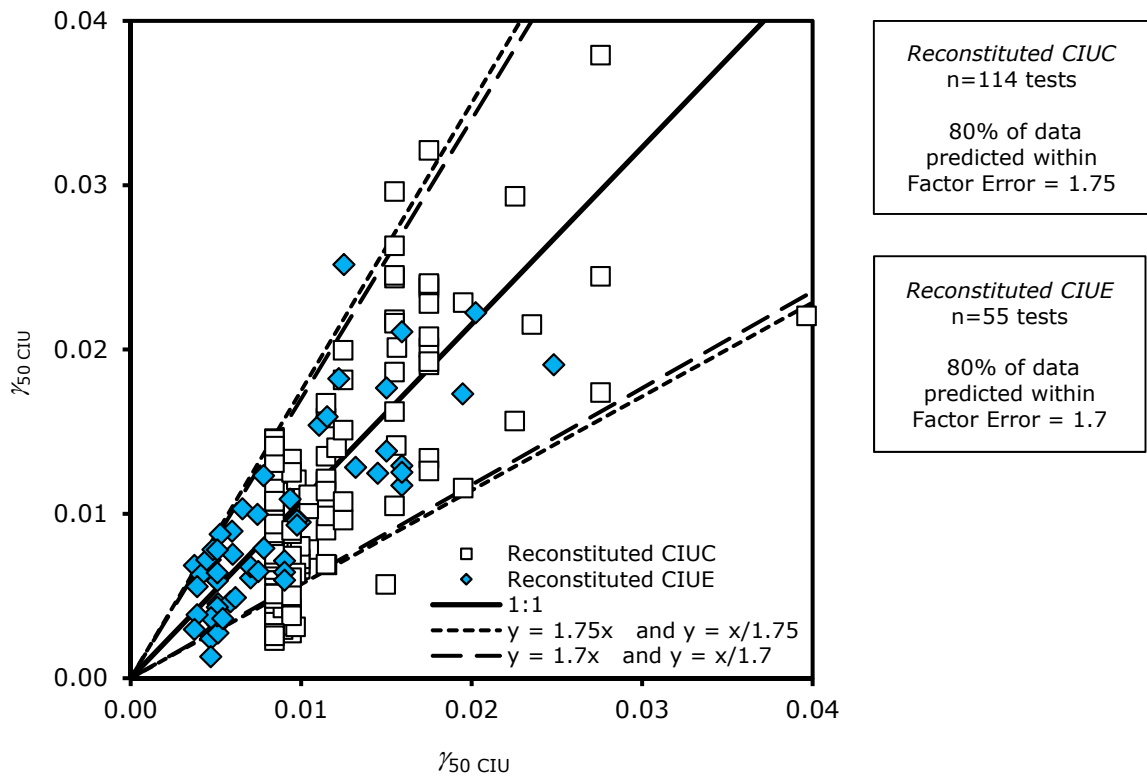

Figure S7. Comparison of observed and predicted values of $\gamma_{50\text{ CIU}}$ (Equations 5 and 6) tested by CIUC or CIUE

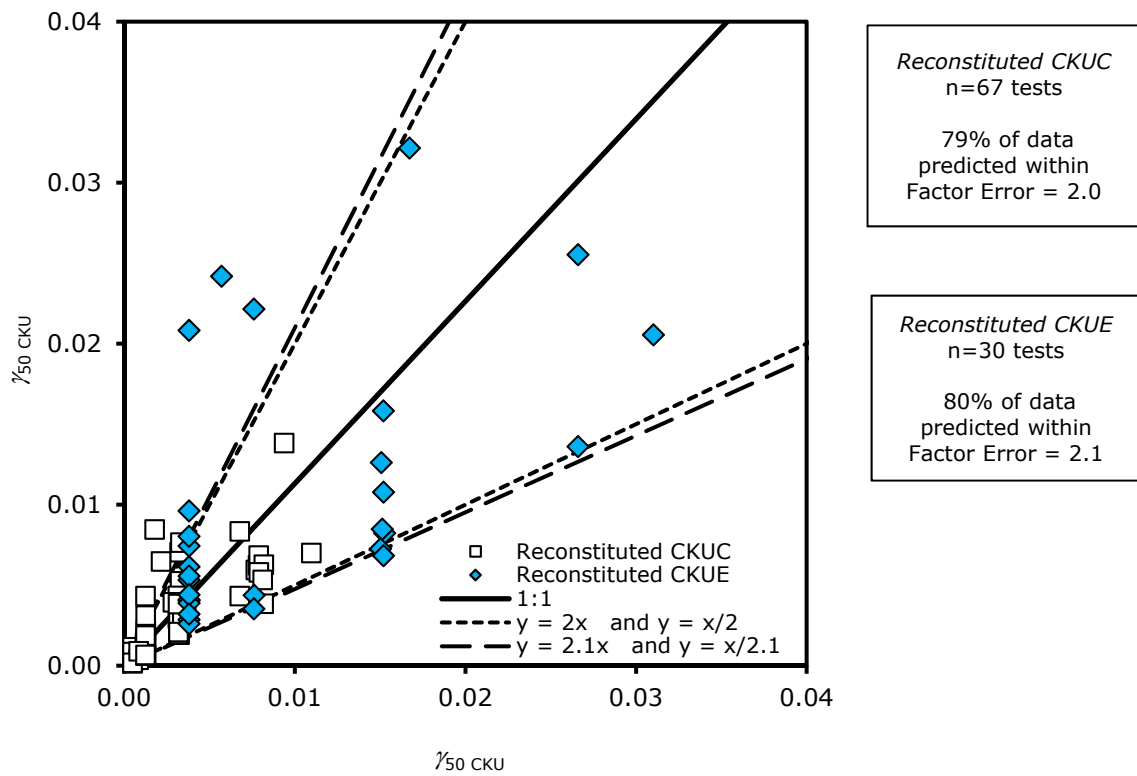

Figure S8. Comparison of observed and predicted values of $\gamma_{50\text{ CKU}}$ (Equations 7 and 8) tested by CKUC or CKUE
