## Research Questions

- **What are the big challenges facing healthcare now and into the future?**
- What are the key criteria that a healthcare system must meet to address present and future needs of urban populations?
- Can a global index:
  1. *effectively capture the criteria for ‘future-ready’ cities?*
  2. *be relevant and useful to healthcare/architecture/city planning professions?*

---

# Walkthrough

Who we are

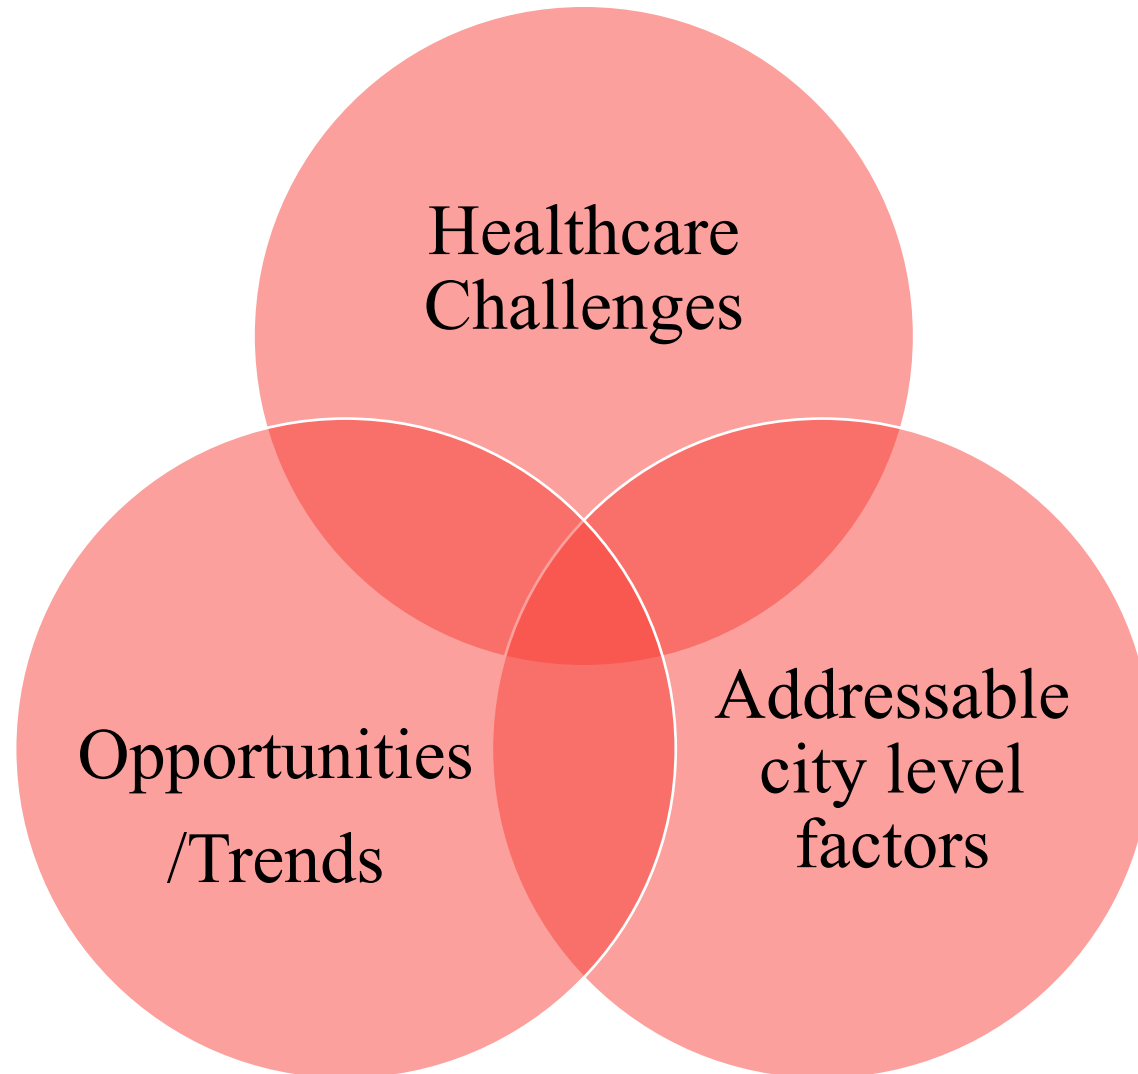

How prepared is healthcare for the future?

**Two exercises**

Conclusions

# Healthcare challenges, opportunities and potential city level interventions

# Task 1

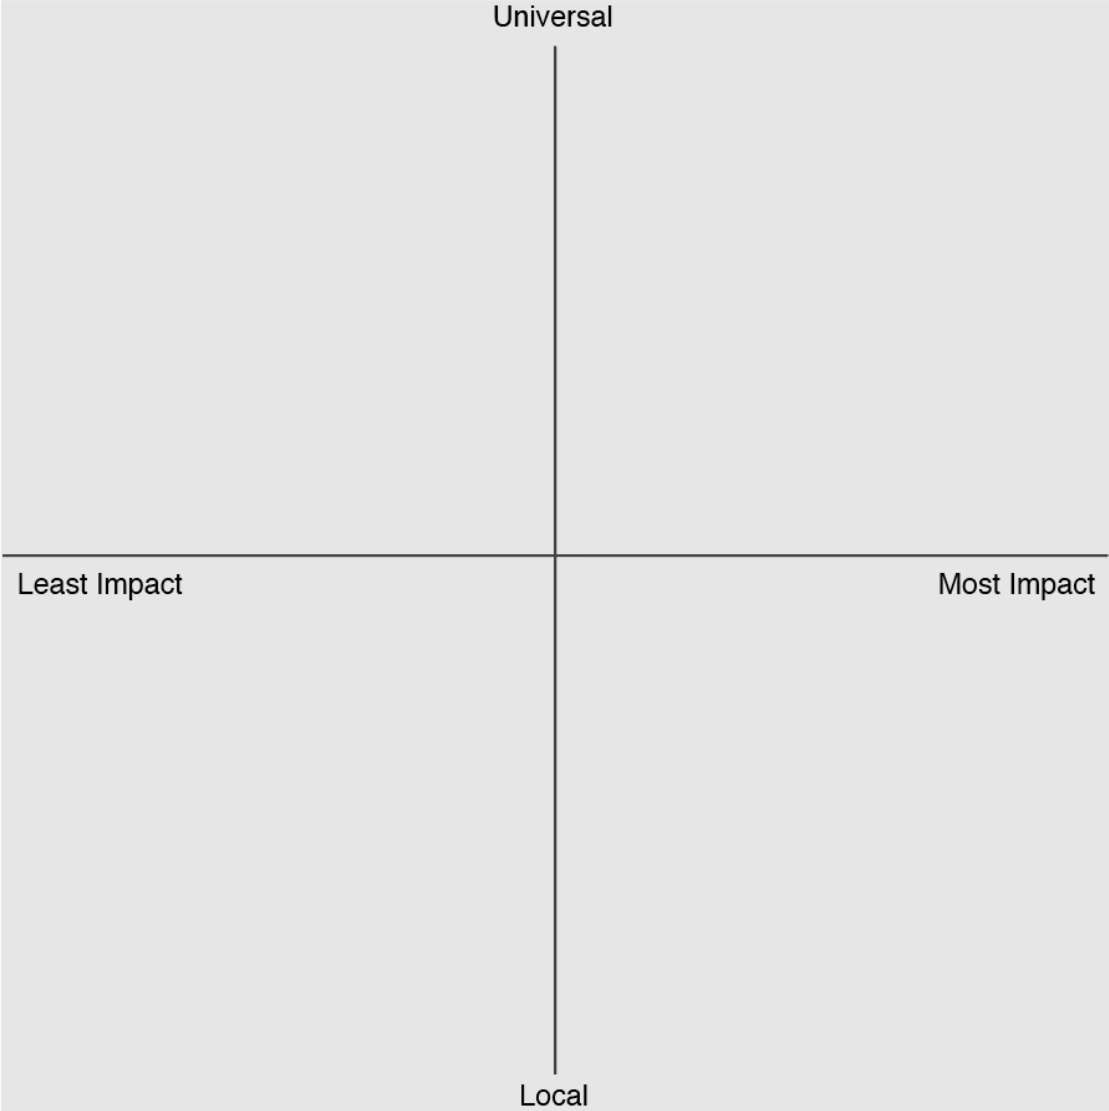

Healthcare Challenge	Implications
e.g. Ageing population	e.g. Pressure on A & E...

Opportunity/Trend	Implications

City Interventions	Implications

# Task 1

## Universality vs Impact

# Task 2

Pick one 'disruptor' (Task 1)...

Pick a city...

The potential solutions are...

preventative

reactive

This has/can be implemented in the city by...

Which factors make the city good at implementing these solutions?

---
