## Variations in Production per Farm and per Worker in Missouri, 1939

HERMAN M. HAAG

In wartime, manpower is an item of scarcity and must be used as effectively as possible on farms as well as in factories and offices. Since the productivity of farm operators and workers varies widely from area to area within the United States and even within a particular state, it has become necessary to promote the shifting of workers and even farm operators from one area to another to make most efficient use of the manpower available for farm production.

To assist those charged with the handling of Missouri farm labor problems in their determination of policies, information relative to differences in productivity of workers among the areas of the state

Average value of farm production per worker, by type of farming areas, Missouri, 1939.

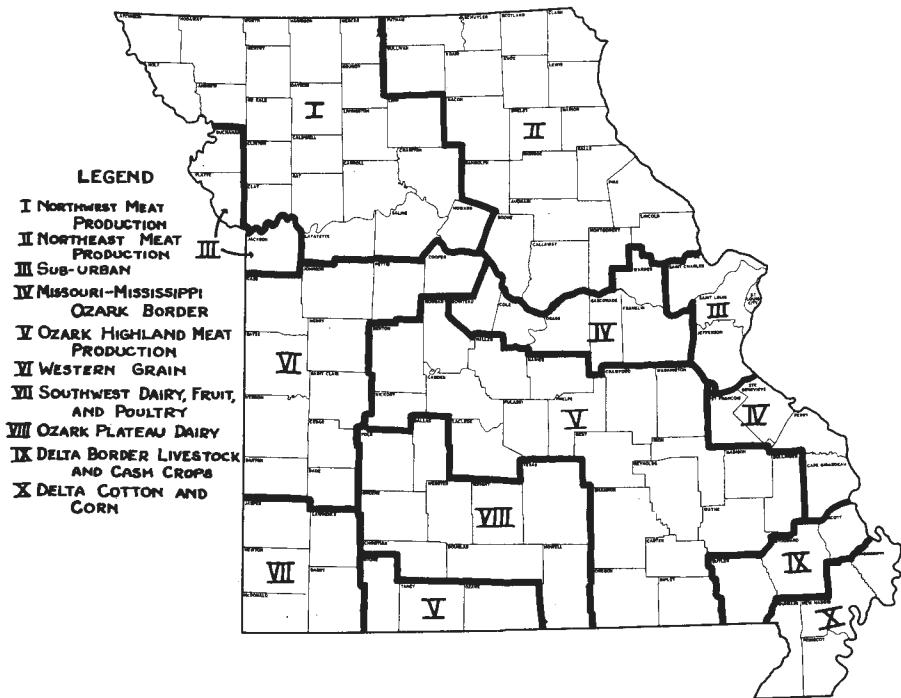

Fig. 1.—Types of farming areas used in this study.

is needed. Unfortunately, the latest data which may be used for these comparisons are those collected during the 1939 census. Although productivity has increased greatly since 1939, which makes the data presented appear out-of-date, it is expected that the relative position of counties and areas has not changed greatly. Thus, the material presented may be used to indicate the relative productivity of farm manpower within a county or area.

#### Production per Farm

It would be desirable to state farm productivity information in physical units, but this is not possible. Thus, the dollar value of production must be used as the best substitute. In 1939, the value of farm production, which includes products used on the farm as well as those sold, ranged, by type-of-farming areas, from \$590 per farm in Area V (Ozark) to \$1,911 in Area X (Southeast Lowland), (Table 1). The state average was \$1,048 per farm.

By counties, value of production per farm varied from \$305 per farm in Carter to \$3,339 in Atchison. Clay, Clinton, and Holt Counties, in Northwest Missouri, and New Madrid and Pemiscot

TABLE 1.—VALUE OF FARM PRODUCTION PER FARM, BY TYPE OF FARMING AREAS, MISSOURI, 1939

Area Number	Number of Farms	Value of Production	Production Per Farm
I	46,342	\$ 69,869,000	\$1,508
II	40,378	43,632,000	1,081
III	15,998	20,361,000	1,273
IV	18,344	16,630,000	907
V	39,663	23,405,000	590
VI	27,077	28,818,000	1,064
VII	14,992	9,798,000	654
VIII	26,069	17,261,000	662
IX	8,893	8,899,000	1,001
X	12,122	23,163,000	1,911
State	249,878	261,836,000	1,048

\*See Figure 1 for location and description of areas

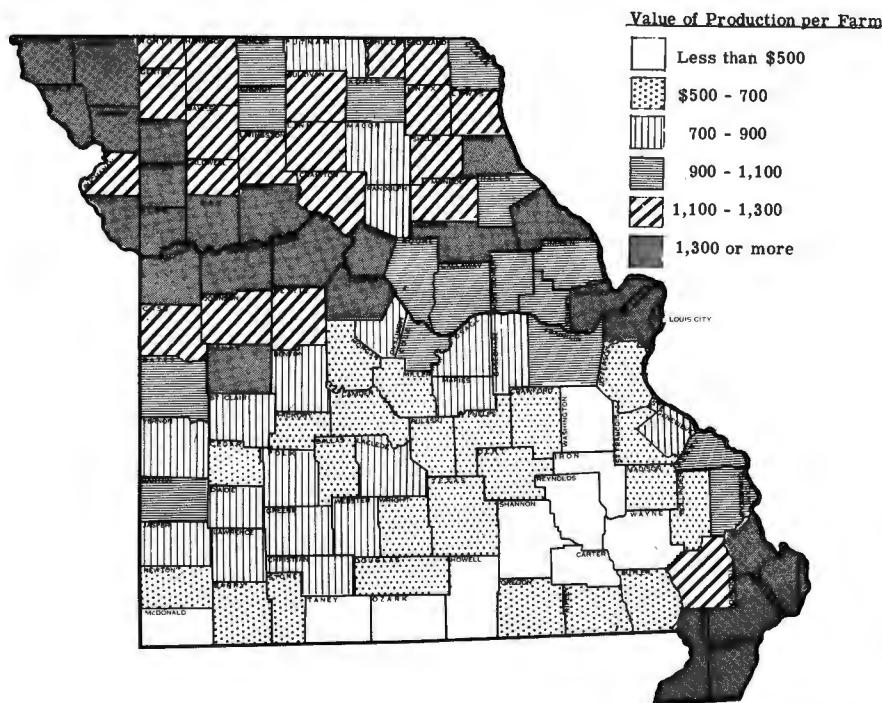

Fig. 2.—Average value of production per farm, by counties, Missouri, 1939.

Counties, in Southeast Missouri, had values of production per farm in excess of \$2,000. The value of production per farm by areas and counties is given in Appendix Table A and shown graphically in Figure 2.

### Distribution of Farms According to Value of Production

The average productivity of a county does not disclose information as to the number of farms on which productivity is low. The 1939 census, however, provides a classification of farms according to value of production which may be used to determine the number and percentages of farms in the counties and areas producing at various levels of production.

For 1939, the value of production was less than \$250 on each of more than one-third of the farms in Area V, (Table 2). The percentage of farms producing this relatively low value of production was also large in Areas VII and VIII. On the other hand, only 3 per cent of the farms produced less than \$250 of farm products in Area X and only 11 per cent in Area I.

Using less than \$400 farm products as an indicator of low production, farm production was low on about one-half of the farms in Areas V and VII. The percentage of farms in each county with less than \$400 of production in 1939 is presented in Figure 3. The percentages varied from 6.0 per cent in Pemiscot County to 76.7

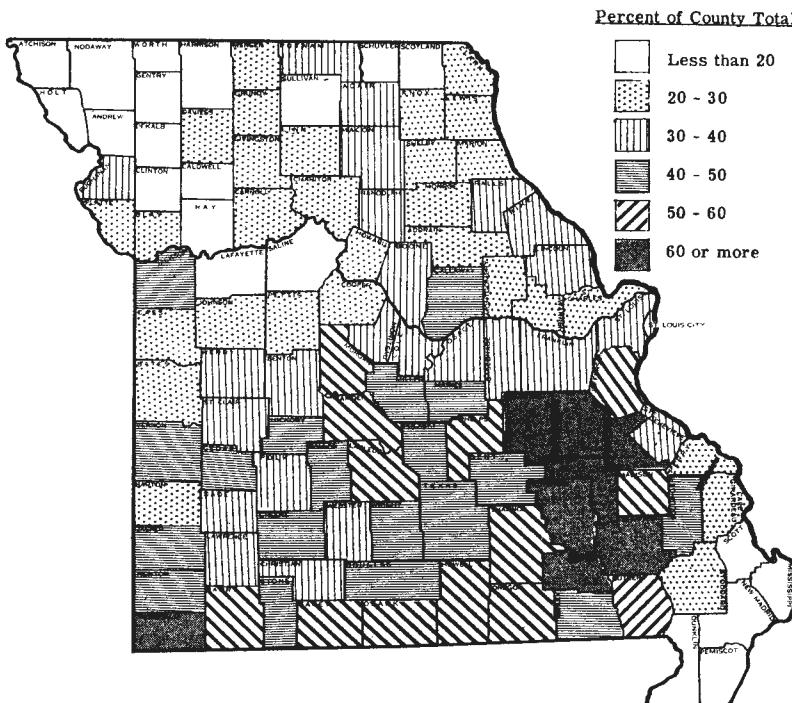

Fig. 3.—Percentage of farms producing less than \$400 of farm products, by counties, Missouri, 1939.

TABLE 2.-PERCENTAGE DISTRIBUTION OF FARMS ACCORDING TO VALUE OF PRODUCTION PER FARM, BY TYPES OF FARM AREAS,  
MISSOURI, 1939

Area	Percentage of farms having specified value of production						All
	Less than \$250	\$250- 400	\$400- 600	\$600- 1000	\$1000- 1500	\$1500- or more	
I	10.6	8.7	12.0	21.6	18.1	29.0	100.0
II	17.3	12.1	15.3	22.5	14.7	18.1	100.0
III	24.7	12.6	11.8	15.9	12.5	22.5	100.0
IV	20.3	12.9	15.3	22.4	14.6	14.5	100.0
V	34.2	19.0	17.1	16.7	6.9	6.2	100.0
VI	18.6	12.2	15.3	21.5	14.4	18.0	100.0
VII	32.1	16.8	16.0	17.8	9.2	8.1	100.0
VIII	27.4	16.8	17.9	20.7	9.7	7.5	100.0
IX	18.5	14.2	15.6	20.8	13.5	17.4	100.0
X	3.4	5.5	9.5	21.4	21.4	38.8	100.0
State	20.9	13.2	14.8	20.3	13.3	17.5	100.0

per cent in Carter County. Figure 4 shows the percentage of farms in each county on which value of production was \$1,000 or more in 1939. These percentages varied from 3.8 per cent in Carter County to 77.9 per cent in Atchison County. The complete data on

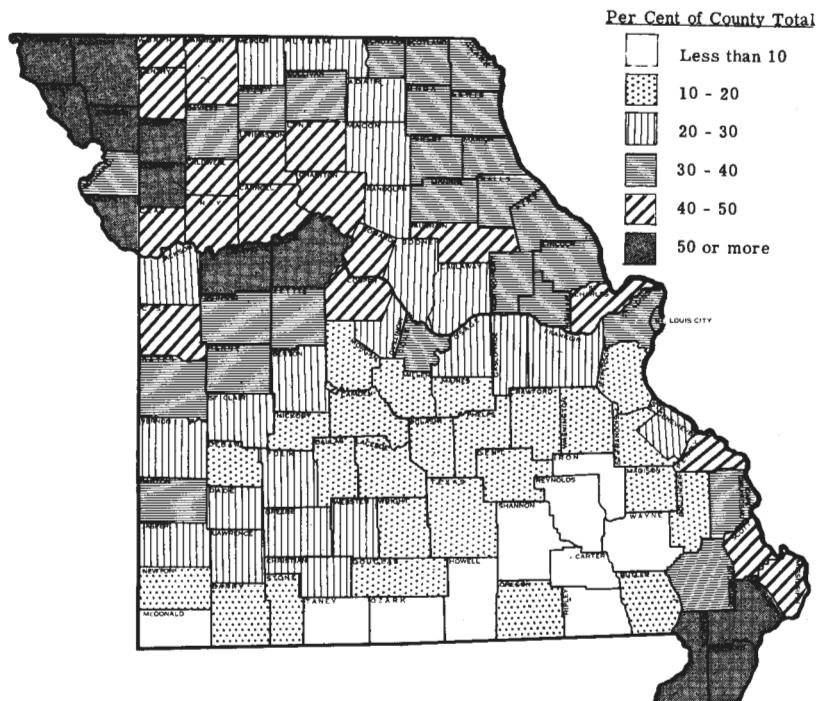

Fig. 4.—Percentage of farms producing \$1,000 or more of farm products, by counties, Missouri, 1939.

distribution of farms according to value of production are given in Appendix Tables B and C.

The farms having a low value of production contribute relatively little to the volume of goods moving into urban food channels. Only 37 per cent of the production on farms having less than \$250 of production went into sales channels, compared with 92 per cent on farms with values of production of \$1,500 or more, (Table 3). The small farms actually contribute less to total family living because the value of products used averaged only \$87 on the farms with less than \$250 of production compared with \$273 on the farms where value of production was \$1,500 or more per farm.

TABLE 3.-PERCENTAGE OF VALUE OF PRODUCTION SOLD OFF THE FARM,  
ACCORDING TO VALUE OF PRODUCTION PER FARM,  
MISSOURI, 1939.

Value of Production	Number of Farms	Value Per Farm			Sales as Per Cent of Production	
		Used on Farm	Amount Sold	Total Production	Per Cent of Production	
Less than \$250	52,212	\$ 87	\$ 50	\$ 137	37	
250-400	32,971	151	171	322	53	
400-600	36,945	183	311	494	63	
600-1000	50,720	216	565	781	72	
1000-1500	33,331	242	977	1,219	80	
1500 or more	43,699	273	3,059	3,332	92	
ALL	249,878	189	859	1,048	82	

As a result of this situation, sales from farms in Area V, where production per farm is relatively small, averaged only 69.3 per cent of total production compared with 91.5 per cent in Area X, where farm production per farm is relatively high, (Table 4). The value of products used on the farm varied from \$143 per farm in Area VII to \$234 in Area I.

TABLE 4.-PROPORTION OF FARM PRODUCTION SOLD OFF  
FARMS, BY TYPE OF FARMING AREAS  
MISSOURI, 1939

Area	Value Per Farm			Sales as Per Cent of Production	
	Used on Farm	Amount Sold	Total Production	Per Cent of Production	
I	\$234	\$1,274	\$1,508	84.5	
II	191	890	1,081	82.3	
III	181	1,092	1,273	85.8	
IV	213	694	907	76.5	
V	181	409	590	69.3	
VI	170	894	1,064	84.0	
VII	143	511	654	78.1	
VIII	168	494	662	74.6	
IX	171	830	1,001	82.9	
X	162	1,749	1,911	91.5	
State	189	859	1,048	82.0	

### Production Per Worker Employed

The Census did not provide information which can be used directly as the average number of workers employed on farms in each county. Such a figure may be estimated, however, by using data available from the Census\*. Using these estimates the average number of workers (or man-years of labor) varied from 207 per 100 farms in Area VII to 310 in Area X, (Table 5). Except for Area X the variation between areas was not great.

**TABLE 5.-NUMBER OF WORKERS AND VALUE OF FARM PRODUCTION PER WORKER BY TYPES OF FARMING AREAS, MISSOURI, 1939**

<u>Area</u>	<u>Average Number of Workers</u>	<u>Value of Production</u>	<u>Workers Per Farm</u>	<u>Production Per Worker</u>
(Thousands)				
I	108,364	\$ 69,869	2.34	\$645
II	89,347	43,632	2.21	488
III	38,132	20,361	2.38	534
IV	43,566	16,630	2.37	382
V	83,209	23,405	2.10	281
VI	61,424	28,818	2.27	469
VII	30,988	9,798	2.07	316
VIII	55,072	17,261	2.11	313
IX	20,536	8,899	2.31	433
X	37,538	23,163	3.10	617
State	568,176	261,836	2.27	461

Based on these data, production per worker was highest on farms in Areas I and X and lowest on Farms in Area V. Production was also relatively low in Areas VII and VIII. Production per worker in Area I was more than twice that in Area V.

By counties, production per worker varied from \$145 in Carter County to \$1,283 in Atchison County. Four counties in Northwestern Missouri produced more than \$800 of farm products per worker. Information for each county appears in Appendix Table A and is shown graphically in Figure 5.

\*In this study, the average number of workers (Man-years of labor) was obtained by adding the following:

1. The number of farm operators, Sept. 24-30, 1939.
2. The number of persons classified as family laborers, Sept. 24-30, 1939.
3. The number of persons classified as laborers hired by the month, Sept. 24-30, 1939.
4. The estimated average number of man-years of labor performed by persons hired other than by the month based on the wages paid in 1939 to workers of this type.

From the above total, the number of man-years of work off farms by farm operators based on the days worked off farms as reported, was deducted.

All basic data are from the 1940 Census of Agriculture.

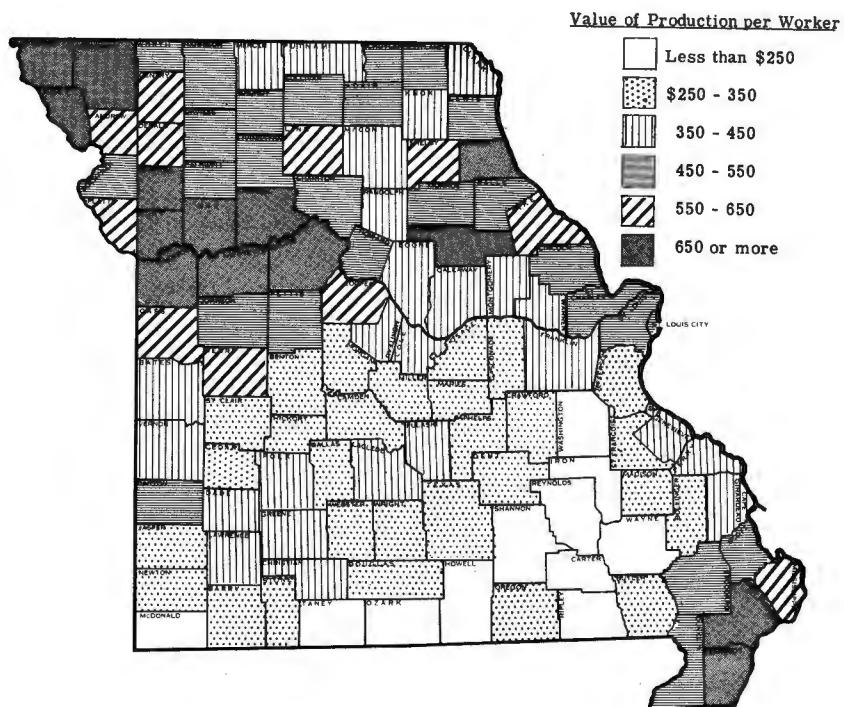

Fig. 5.—Value of farm production per worker on farms, by counties, Missouri, 1939.

#### Production Per \$1000 of Capital

It might be thought that production per worker is low in certain areas of the state because more labor and less capital are used in the production of farm products. If this were true, production per \$1000 of capital would be highest in the areas where production per worker is lower. This is not the case, however, for production per unit of capital was highest in Area X where production per worker was high, (Table 6).

Value of production per \$1000 of capital in Southeastern Missouri is high because it takes relatively little farm machinery and equipment for cotton, the most important crop. In Area III and IV, production is low in relation to capital invested, because the land in this area has high "site" value due to its location near metropolitan centers, and because production of truck crops, prominent in these areas, requires relatively large investments in machinery and equipment.

By counties, value of production per \$1000 of capital varied from \$107 in St. Louis County to \$404 in New Madrid County, (Appendix Table D).

TABLE 6.-VALUE OF FARM PRODUCTION PER \$1000 OF CAPITAL INVESTED, BY TYPES OF FARMING AREAS, MISSOURI, 1939

Area	Value of Capital		Production per \$1000 of Capital	
	Machinery and Equipment	All Capital	Machinery and Equipment	All Capital
(Thousands of Dollars)				
I	23,584	332,080	\$2,963	\$210
II	15,255	188,442	2,860	232
III	7,470	145,526	2,726	140
IV	7,292	87,286	2,281	191
V	6,946	96,182	3,370	243
VI	10,211	128,375	2,822	224
VII	3,610	48,481	2,714	202
VIII	4,905	70,338	3,519	245
IX	2,501	31,125	3,558	286
X	5,276	66,522	4,390	348
State	87,050	1,194,357	3,008	219

#### Total Number of Workers Used on Farms

For some purposes the maximum numbers of workers used on farms, which reflect seasonal needs for labor on farms, is of more value than the average number. The nearest approach to the maximum number of workers used is the number employed on farms during the last week of September, 1939, as reported by the Census. This was a busy season of the year but not the season of maximum needs in any area except possibly Area X. Except for Area X, the number of workers employed in September, 1939, was not much different from the average number for the year 1939, (Table 7). Data by counties appear in Appendix Table E.

TABLE 7.-NUMBER OF FARM WORKERS PER AREA AND PER FARM, SEPT. 24-30, 1939 AND ESTIMATED CHANGE IN CIVILIAN POPULATION BY AREAS FROM APRIL 1, 1940 TO NOVEMBER 1, 1943.

Area	Numbers of Workers		Estimated Civilian Population		
	Total	Per Farm	Nov. 1, 1943	Apr. 1, 1940	Percentage Change
I	113,427	2.45	308,300	367,307	-16.1
II	95,543	2.37	281,339	328,803	-14.4
III	41,754	2.61	1,756,564	1,732,622	1.4
IV	46,750	2.55	188,804	213,066	-11.4
V	90,760	2.29	230,914	281,671	-18.0
VI	65,141	2.41	176,446	210,231	-16.1
VII	34,144	2.28	155,685	171,676	-9.3
VIII	60,443	2.32	196,161	225,878	-13.2
IX	23,002	2.59	86,547	97,662	-11.4
X	65,956	5.44	144,030	154,750	-6.9
Total	636,920	2.55	3,524,790	3,783,666	-6.8

### Changes in Population from 1940 to 1943

The major shifts in population during the past several years also have considerable influence on the availability of labor. Although the average loss of civilian population for the entire state from April 1, 1940 to November 1, 1943, was less than 7 per cent, losses in Areas I, V and VI were in excess of 15 per cent, (Table 7). By counties, population changes varied from an increase of 20.5 per cent for Phelps county to a decline of 32.9 per cent for Shannon County.

War activities affected the shifts in some counties. Pulaski, Laclede, and Texas counties, in addition to Phelps, were affected by Fort Leonard Wood. Also, shifts in Newton and Jasper counties were lessened by Camp Crowder. The metropolitan counties of St. Louis, St. Charles, Clay and Jackson, as well as the city of St. Louis, showed increases in population.

Changes in population are presented by counties in Figure 6 and Appendix Table E.

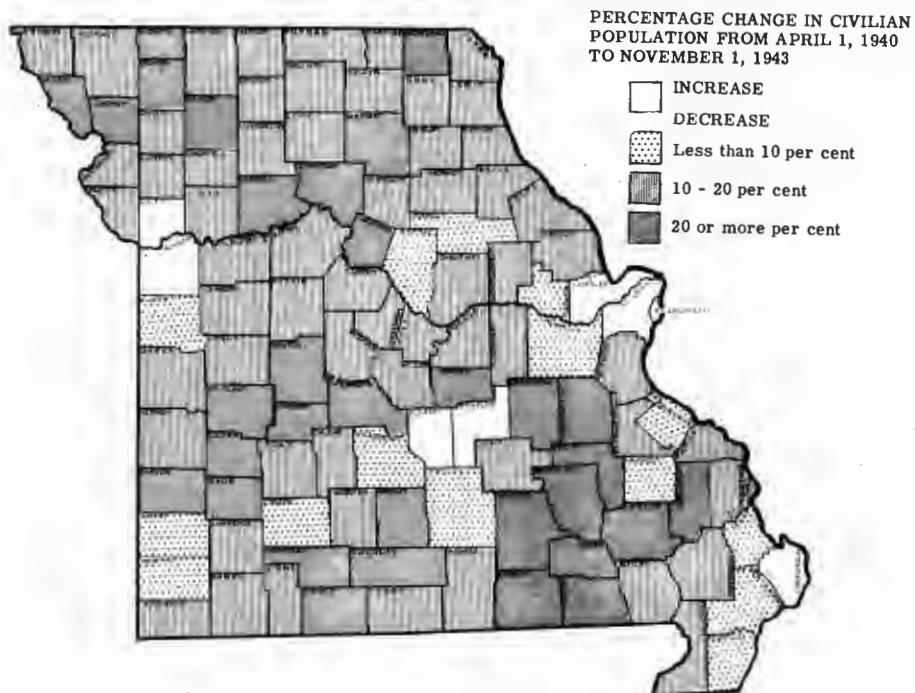

Fig. 6.—Percentage changes in civilian population from April 1, 1940, to November 1, 1943, Missouri.
