

INTRODUCTION TO QUANTUM CHROMODYNAMICS

Eduardo de Rafael

Centre de Physique Théorique, CNRS-Luminy, Case 907

F-13288 Marseille Cedex 9, France

Outline:

1. A Short Historical Introduction to QCD
2. Asymptotic Freedom and Perturbation Theory
3. The Operator Product Expansion and its Phenomenological Applications
4. Light Quarks and Heavy Quarks in QCD
5. Present Status of our Understanding of QCD Beyond the Perturbative Regime
