

Hubert Gnaser

Low-Energy Ion Irradiation of Solid Surfaces

With 93 Figures

Springer

Contents

1. Introduction	1
2. Interaction of Low-Energy Ions with Solids	7
2.1 Energy Loss and Slowing Down of Incident Particles	8
2.1.1 Stopping Cross Sections	8
2.1.2 Ion Ranges in Solids	12
2.1.3 Energy Transfer to the Surface	15
2.2 Displacement Cascades and Generation of Defects	17
2.2.1 Bulk Damage	19
2.2.2 Formation of Surface Vacancies and Adatoms	24
2.2.3 Extended Surface Damage	32
2.3 Sputtering of Particles from Elemental Targets	37
2.3.1 Linear Collision Cascade	38
2.3.2 Single-Knockon (Near-Threshold) Regime	49
2.3.3 Sputtering from Single Crystals	55
2.3.4 Cluster Emission in Sputtering	62
2.4 Cluster-Ion Bombardment	74
3. Composition Changes in Multicomponent Materials	83
3.1 Preferential Sputtering	85
3.1.1 Theoretical Concepts	87
3.1.2 Surface Binding Energies in Alloys	91
3.2 Processes Effecting Composition Changes	95
3.2.1 Fluence Dependence and Stationary State	95
3.2.2 Collisional Mixing	96
3.2.3 Gibbsian Segregation	105
3.2.4 Radiation-Enhanced Diffusion	109
3.2.5 Radiation-Induced Segregation	111
3.3 Data from Alloys	112
3.3.1 Near-Surface Composition Changes and Profiles	113
3.3.2 Angular Distributions of Sputtered Atoms	123
3.3.3 Energy Spectra of Sputtered Species	127
3.3.4 Mass Distributions of Sputtered Atoms and Clusters ..	129

3.4	Sputtering of Isotopic Mixtures	133
3.4.1	Transient Variations of the Isotopic Flux Composition	138
3.4.2	Emission-Angle-Dependent Isotopic Flux	140
3.4.3	Computer Simulations of Isotope Sputtering	141
3.4.4	Summary of Isotope Sputtering	149
4.	Ion Bombardment of Crystalline Semiconductors	153
4.1	Surface Morphology: Defect and Adatom Formation	155
4.1.1	Single-Ion Impacts and Surface Defects	155
4.1.2	Multilayer Removal and Surface Roughening	162
4.2	Near-Surface Structural Modifications	167
4.2.1	Amorphized Surface Layer	168
4.2.2	Ion-Energy and Fluence Dependence of Amorphization	173
4.2.3	Bulk Versus Surface Defects: Computations of Defect Production	186
4.3	Modification of Electronic Properties	191
4.4	Composition Changes in Compound Semiconductors	195
4.4.1	GaAs(110)	195
4.4.2	Other Semiconductors	201
5.	Ionization Processes of Sputtered Atoms and Molecules . .	205
5.1	Mechanisms of Secondary-Ion Formation: Ionization Probability of Sputtered Ions	207
5.1.1	Electron-Tunneling Model	207
5.1.2	Bond-Breaking Model	213
5.2	Sputtering with Cs ⁺ Ions	217
5.2.1	Cesium Implantation Distribution	219
5.2.2	Work-Function Changes Due to Cs Incorporation	221
5.2.3	Correlation Between Work Function and Ionization	225
5.3	Isotopic Mass Effects in Sputtered-Ion Formation	228
5.4	Formation of Molecular Ions in Sputtering	234
5.4.1	Cs-Carrying Diatomic Cations	236
5.4.2	Doubly Charged Negative C _n ²⁻ Clusters	239
5.4.3	Sputtering of Metastable N ₂ ⁻ and CO ⁻ Anions	243
5.5	Ion Emission Under Multiply-Charged-Ion Bombardment	246
	Appendix	251
A.1	Experimental Techniques	251
A.2	Computer Simulations	256
	References	259
	Index	291
