Theory of Electron Emission from Nearly-Free-Electron Metals by Proton and Electron Bombardment

By <i>M. Rösler</i> and <i>W. Brauer</i> (With 42 Figures)	1
1. Introduction	1
2. Basic Quantities in IIEE and SEE	3
3. Basic Features	6
4. Escape of Secondary Electrons	8
5. Transport Theory of Excited Electrons	10
5.1 Transition Probabilities. Dielectric Function. Discussion of Different Elementary Processes	10
5.2 General Form of the Transport Equation	14
5.3 Homogeneous Excitation	16
6. Scattering Functions and Mean Free Paths	16
6.1 Scattering Functions	17
6.1.1 Elastic Scattering	17
6.1.2 Inelastic Scattering	17
6.2 Mean Free Paths	21
6.2.1 Elastic Scattering	21
6.2.2 Inelastic Scattering	22
7. Excitation Functions	23
7.1 IIEE	24
7.1.1 Excitation of Single Conduction Electrons	25
7.1.2 Excitation by Decay of Plasmons	26
7.1.3 Excitation of Core Electrons	30
7.1.4 Auger Excitation	31
7.1.5 Comparison of Different Excitation Mechanisms	33
7.1.6 Critical Discussion of the Simple Interaction Model ..	34
7.2 SEE	35
7.2.1 Excitation of Single Conduction Electrons	35
7.2.2 Excitation by Decay of Plasmons	38
7.2.3 Excitation of Core Electrons and Excitation by Auger Processes	38
7.2.4 Atomic Model of Core Excitations	40
7.2.5 Comparison of Different Excitation Mechanisms	41
8. Solution of the Transport Equation	43
8.1 General Discussion	43
8.2 Monoenergetic Isotropic Excitation	44

9. Results for Aluminum and Comparison to Experimental Data	46
9.1 IIEE	47
9.1.1 Energy and Angular Distribution	47
9.1.2 Yield	48
9.2 SEE	50
9.2.1 Energy and Angular Distribution	50
9.2.2 Yield	50
10. The Role of Elastic Scattering	53
11. Miscellaneous Problems	54
11.1 Results for Thin Films	55
11.2 Stopping Power and Electron Yield in IIEE	56
12. Concluding Remarks	57
Appendix	59
References	63

Theoretical Description of Secondary Electron Emission Induced by Electron or Ion Beams Impinging on Solids

By *J. Devooght, J.-C. Dehaes, A. Dubus, M. Cailler*
and *J.-P. Ganachaud* (With 22 Figures)

1. Introduction	67
2. Electron Collisions in Solids	70
2.1 Elastic Collisions	71
2.2 Inelastic Collisions	75
2.2.1 Dielectric Response Functions for NFE Materials	75
2.2.2 Bulk and Surface Plasmons	76
2.2.3 Inner-Shell Excitations	77
2.3 Extensions to Non-Free-Electron Solids	78
2.3.1 Dielectric Response Functions of a Model Semiconductor or Insulator	78
2.3.2 Use of the Optical Loss Function	78
2.3.3 Extension of the Gryzinski Formulation to the Valence Band	80
2.4 Conclusion	81
3. Monte Carlo Simulation Models	81
3.1 Direct Simulation Scheme	82
3.2 Continuous Slowing-Down Scheme	83
3.3 Multiple Collision Scheme	84
3.4 Application of Direct MTC Simulation to SEE from Nearly-Free-Electron Materials	84
3.5 Additional Comments About the MTC Simulation Method	88
4. Transport Models	89
4.1 The Boltzmann Equation	92
4.2 The Age-Diffusion Model	94
4.3 Integral Equations	97
4.3.1 Solution of the Integral Equation in a Semi-Infinite Medium	98

4.3.2	Transport-Albedo Model	101
4.4	Numerical Solution of the Boltzmann Equation	102
4.5	The Model of Schou	104
5.	Theoretical Results	105
5.1	Electron Emission from a Polycrystalline Al Target	106
5.1.1	SEE Spectrum	106
5.1.2	Energy-Loss Spectrum	107
5.1.3	Secondary Yield and Backscattering Coefficient	110
5.1.4	Spatial Distribution of Outgoing Electrons	112
5.1.5	Statistical Aspects of the Electron Emission Phenomenon	113
5.2	SEE from a Polycrystalline Gold Target	115
