CLARENDON PRESS • OXFORD

Contents

1	Geometry and Complex Arithmetic	1
I	Introduction	1
1	Historical Sketch	1
2	Bombelli's "Wild Thought"	3
3	Some Terminology and Notation	6
4	Practice	7
5	Symbolic and Geometric Arithmetic	8
II	Euler's Formula	10
1	Introduction	10
2	Moving Particle Argument	10
3	Power Series Argument	12
4	Sine and Cosine in Terms of Euler's Formula	14
III	Some Applications	14
1	Introduction	14
2	Trigonometry	14
3	Geometry	16
4	Calculus	20
5	Algebra	22
6	Vectorial Operations	27
IV	Transformations and Euclidean Geometry*	30
1	Geometry Through the Eyes of Felix Klein	30
2	Classifying Motions	34
3	Three Reflections Theorem	37
4	Similarities and Complex Arithmetic	39
5	Spatial Complex Numbers?	43
V	Exercises	45
2	Complex Functions as Transformations	55
I	Introduction	55
II	Polynomials	57
1	Positive Integer Powers	57
2	Cubics Revisited*	59
3	Cassinian Curves*	60
III	Power Series	64
1	The Mystery of Real Power Series	64
2	The Disc of Convergence	67

3	Approximating a Power Series with a Polynomial	70
4	Uniqueness	71
5	Manipulating Power Series	72
6	Finding the Radius of Convergence	74
7	Fourier Series*	77
IV	The Exponential Function	79
1	Power Series Approach	79
2	The Geometry of the Mapping	80
3	Another Approach	81
V	Cosine and Sine	84
1	Definitions and Identities	84
2	Relation to Hyperbolic Functions	86
3	The Geometry of the Mapping	88
VI	Multifunctions	90
1	Example: Fractional Powers	90
2	Single-Valued Branches of a Multifunction	92
3	Relevance to Power Series	95
4	An Example with Two Branch Points	96
VII	The Logarithm Function	98
1	Inverse of the Exponential Function	98
2	The Logarithmic Power Series	100
3	General Powers	101
VIII	Averaging over Circles*	102
1	The Centroid	102
2	Averaging over Regular Polygons	105
3	Averaging over Circles	108
IX	Exercises	111
3	Möbius Transformations and Inversion	122
I	Introduction	122
1	Definition of Möbius Transformations	122
2	Connection with Einstein's Theory of Relativity*	122
3	Decomposition into Simple Transformations	123
II	Inversion	124
1	Preliminary Definitions and Facts	124
2	Preservation of Circles	126
3	Construction Using Orthogonal Circles	128
4	Preservation of Angles	130
5	Preservation of Symmetry	133
6	Inversion in a Sphere	133
III	Three Illustrative Applications of Inversion	136
1	A Problem on Touching Circles	136
2	Quadrilaterals with Orthogonal Diagonals	137
3	Ptolemy's Theorem	138

IV	The Riemann Sphere	139
1	The Point at Infinity	139
2	Stereographic Projection	140
3	Transferring Complex Functions to the Sphere	143
4	Behaviour of Functions at Infinity	144
5	Stereographic Formulae*	146
V	Möbius Transformations: Basic Results	148
1	Preservation of Circles, Angles, and Symmetry	148
2	Non-Uniqueness of the Coefficients	149
3	The Group Property	150
4	Fixed Points	151
5	Fixed Points at Infinity	152
6	The Cross-Ratio	154
VI	Möbius Transformations as Matrices*	156
1	Evidence of a Link with Linear Algebra	156
2	The Explanation: Homogeneous Coordinates	157
3	Eigenvectors and Eigenvalues*	158
4	Rotations of the Sphere*	161
VII	Visualization and Classification*	162
1	The Main Idea	162
2	Elliptic, Hyperbolic, and Loxodromic types	164
3	Local Geometric Interpretation of the Multiplier	166
4	Parabolic Transformations	168
5	Computing the Multiplier*	169
6	Eigenvalue Interpretation of the Multiplier*	170
VIII	Decomposition into 2 or 4 Reflections*	172
1	Introduction	172
2	Elliptic Case	172
3	Hyperbolic Case	173
4	Parabolic Case	174
5	Summary	175
IX	Automorphisms of the Unit Disc*	176
1	Counting Degrees of Freedom	176
2	Finding the Formula via the Symmetry Principle	177
3	Interpreting the Formula Geometrically*	178
4	Introduction to Riemann's Mapping Theorem	180
X	Exercises	181
4	Differentiation: The Amplitwist Concept	189
I	Introduction	189
II	A Puzzling Phenomenon	189
III	Local Description of Mappings in the Plane	191
1	Introduction	191
2	The Jacobian Matrix	192
3	The Amplitwist Concept	193

IV	The Complex Derivative as Amplitwist	194
1	The Real Derivative Re-examined	194
2	The Complex Derivative	195
3	Analytic Functions	197
4	A Brief Summary	198
V	Some Simple Examples	199
VI	Conformal = Analytic	200
1	Introduction	200
2	Conformality Throughout a Region	201
3	Conformality and the Riemann Sphere	203
VII	Critical Points	204
1	Degrees of Crushing	204
2	Breakdown of Conformality	205
3	Branch Points	206
VIII	The Cauchy-Riemann Equations	207
1	Introduction	207
2	The Geometry of Linear Transformations	208
3	The Cauchy-Riemann Equations	209
IX	Exercises	211
5	Further Geometry of Differentiation	216
I	Cauchy-Riemann Revealed	216
1	Introduction	216
2	The Cartesian Form	216
3	The Polar Form	217
II	An Intimation of Rigidity	219
III	Visual Differentiation of $\log(z)$	222
IV	Rules of Differentiation	223
1	Composition	223
2	Inverse Functions	224
3	Addition and Multiplication	225
V	Polynomials, Power Series, and Rational Functions	226
1	Polynomials	226
2	Power Series	227
3	Rational Functions	228
VI	Visual Differentiation of the Power Function	229
VII	Visual Differentiation of $\exp(z)$	231
VIII	Geometric Solution of $E' = E$	232
IX	An Application of Higher Derivatives: Curvature*	234
1	Introduction	234

2	Analytic Transformation of Curvature	235
3	Complex Curvature	238
X	Celestial Mechanics*	241
1	Central Force Fields	241
2	Two Kinds of Elliptical Orbit	241
3	Changing the First into the Second	243
4	The Geometry of Force	244
5	An Explanation	245
6	The Kasner—Arnol'd Theorem	246
XI	Analytic Continuation*	247
1	Introduction	247
2	Rigidity	249
3	Uniqueness	250
4	Preservation of Identities	251
5	Analytic Continuation via Reflections	252
XII	Exercises	258
6	Non-Euclidean Geometry*	267
I	Introduction	267
1	The Parallel Axiom	267
2	Some Facts from Non-Euclidean Geometry	269
3	Geometry on a Curved Surface	270
4	Intrinsic versus Extrinsic Geometry	273
5	Gaussian Curvature	273
6	Surfaces of Constant Curvature	275
7	The Connection with Möbius Transformations	277
II	Spherical Geometry	278
1	<i>The</i> Angular Excess of a Spherical Triangle	278
2	Motions of the Sphere	279
3	A Conformal Map of the Sphere	283
4	Spatial Rotations as Möbius Transformations	286
5	Spatial Rotations and Quaternions	290
III	Hyperbolic Geometry	293
1	<i>The</i> Tractrix and <i>the</i> Pseudosphere	293
2	The Constant Curvature of the Pseudosphere*	295
3	A Conformal Map of the Pseudosphere	296
4	Beltrami's Hyperbolic Plane	298
5	Hyperbolic Lines and Reflections	301
6	The Bolyai-Lobachevsky Formula*	305
7	The Three Types of Direct Motion	306
8	Decomposition into Two Reflections	311
9	The Angular Excess of a Hyperbolic Triangle	313
10	The Poincaré Disc	315
11	Motions of the Poincaré Disc	319
12	The Hemisphere Model and Hyperbolic Space	322
IV	Exercises	328

7	Winding Numbers and Topology	338
I	Winding Number	338
1	The Definition	338
2	What does "inside" mean?	339
3	Finding Winding Numbers Quickly	340
II	Hopf's Degree Theorem	341
1	The Result	341
2	Loops as Mappings of the Circle*	342
3	The Explanation*	343
III	Polynomials and the Argument Principle	344
IV	A Topological Argument Principle*	346
1	Counting Preimages Algebraically	346
2	Counting Preimages Geometrically	347
3	Topological Characteristics of Analyticity	349
4	A Topological Argument Principle	350
5	Two Examples	352
V	Rouché's Theorem	353
1	The Result	353
2	The Fundamental Theorem of Algebra	354
3	Brouwer's Fixed Point Theorem*	354
VI	Maxima and Minima	355
1	Maximum-Modulus Theorem	355
2	Related Results	357
VII	The Schwarz-Pick Lemma*	357
1	Schwarz's Lemma	357
2	Liouville's Theorem	359
3	Pick's Result	360
VIII	The Generalized Argument Principle	363
1	Rational Functions	363
2	Poles and Essential Singularities	365
3	The Explanation*	367
IX	Exercises	369
8	Complex Integration: Cauchy's Theorem	377
I	Introduction	377
II	The Real Integral	378
1	The Riemann Sum	378
2	The Trapezoidal Rule	379
3	Geometric Estimation of Errors	380
III	The Complex Integral	383
1	Complex Riemann Sums	383
2	A Visual Technique	386
3	A Useful Inequality	386

4	Rules of Integration	387
IV	Complex Inversion	388
1	A Circular Arc	388
2	General Loops	390
3	Winding Number	391
V	Conjugation	392
1	Introduction	392
2	Area Interpretation	393
3	General Loops	395
VI	Power Functions	395
1	Integration along a Circular Arc	395
2	Complex Inversion as a Limiting Case*	397
3	General Contours and the Deformation Theorem	397
4	A Further Extension of the Theorem	399
5	Residues	400
VII	The Exponential Mapping	401
VIII	The Fundamental Theorem	402
1	Introduction	402
2	An Example	403
3	The Fundamental Theorem	404
4	The Integral as Antiderivative	406
5	Logarithm as Integral	408
IX	Parametric Evaluation	409
X	Cauchy's Theorem	410
1	Some Preliminaries	410
2	The Explanation	412
XI	The General Cauchy Theorem	414
1	The Result	414
2	The Explanation	415
3	A Simpler Explanation	417
XII	The General Formula of Contour Integration	418
XIII	Exercises	420
9	Cauchy's Formula and Its Applications	427
I	Cauchy's Formula	427
1	Introduction	427
2	First Explanation	427
3	Gauss' Mean Value Theorem	429
4	General Cauchy Formula	429
II	Infinite Differentiability and Taylor Series	431
1	Infinite Differentiability	431
2	Taylor Series	432
III	Calculus of Residues	434

1	Laurent Series Centred at a Pole	434
2	A Formula for Calculating Residues	435
3	Application to Real Integrals	436
4	Calculating Residues using Taylor Series	438
5	Application to Summation of Series	439
	IV Annular Laurent Series	442
1	An Example	442
2	Laurent's Theorem	442
	V Exercises	446
	10 Vector Fields: Physics and Topology	450
I	Vector Fields	450
1	Complex Functions as Vector Fields	450
2	Physical Vector Fields	451
3	Flows and Force Fields	453
4	Sources and Sinks	454
II	Winding Numbers and Vector Fields*	456
1	The Index of a Singular Point	456
2	The Index According to Poincaré	459
3	The Index Theorem	460
	III Flows on Closed Surfaces*	462
1	Formulation of the Poincaré-Hopf Theorem	462
2	Defining the Index on a Surface	464
3	An Explanation of the Poincaré-Hopf Theorem	465
	IV Exercises	468
	11 Vector Fields and Complex Integration	472
I	Flux and Work	472
1	Flux	472
2	Work	474
3	Local Flux and Local Work	476
4	Divergence and Curl in Geometric Form*	478
5	Divergence-Free and Curl-Free Vector Fields	479
II	Complex Integration in Terms of Vector Fields	481
1	The Plya Vector Field	481
2	Cauchy's Theorem	483
3	Example: Area as Flux	484
4	Example: Winding Number as Flux	485
5	Local Behaviour of Vector Fields*	486
6	Cauchy's Formula	488
7	Positive Powers	489
8	Negative Powers and Multipoles	490
9	Multipoles at Infinity	492
10	Laurent's Series as a Multipole Expansion	493
	III The Complex Potential	494

1	Introduction	494
2	The Stream Function	494
3	The Gradient Field	497
4	The Potential Function	498
5	The Complex Potential	500
6	Examples	503
IV Exercises		505
12 Flows and Harmonic Functions		508
I	Harmonic Duals	508
1	Dual Flows	508
2	Harmonic Duals	511
II	Conformal Invariance	513
1	Conformal Invariance of Harmonicity	513
2	Conformal Invariance of the Laplacian	515
3	The Meaning of the Laplacian	516
III A Powerful Computational Tool		517
IV The Complex Curvature Revisited*		520
1	Some Geometry of Harmonic Equipotentials	520
2	The Curvature of Harmonic Equipotentials	520
3	Further Complex Curvature Calculations	523
4	Further Geometry of the Complex Curvature	525
V Flow Around an Obstacle		527
1	Introduction	527
2	An Example	527
3	The Method of Images	532
4	Mapping One Flow Onto Another	538
VI The Physics of Riemann's Mapping Theorem		540
1	Introduction	540
2	Exterior Mappings and Flows Round Obstacles	541
3	Interior Mappings and Dipoles	544
4	Interior Mappings, Vortices, and Sources	546
5	An Example: Automorphisms of the Disc	549
6	Green's Function	550
VII Dirichlet's Problem		554
1	Introduction	554
2	Schwarz's Interpretation	556
3	Dirichlet's Problem for the Disc	558
4	The Interpretations of Neumann and Böcher	560
5	Green's General Formula	565
VIII Exercises		570
References		573
Index		579
