GRADUATE STUDENT SERIES IN PHYSICS

Series Editor: Professor Douglas F Brewer, MA, DPhil Emeritus Professor of Experimental Physics, University of Sussex

GAUGE THEORIES IN PARTICLE PHYSICS

A PRACTICAL INTRODUCTION THIRD EDITION

Volume 1

From Relativistic Quantum Mechanics to QED

IAN J R AITCHISON

Department of Physics University of Oxford

ANTHONY J G HEY

Department of Electronics and Computer Science University of Southampton

CONTENTS

Preface to the Third Edition

xiii

PART 1 INTRODUCTORY SURVEY, ELECTROMAGNETISM AS A GAUGE THEORY, AND RELATIVISTIC QUANTUM MECHANICS

1	Qua	irks and Leptons	3
	1.1	The Standard Model	3
	1.2	Levels of structure: from atoms to quarks	5
		1.2.1 Atoms \rightarrow nucleus	5
		1.2.2 Nuclei \rightarrow nucleons	8
		$1.2.3$ · Nucleons \rightarrow quarks	12
	1.3	The generations and flavours of quarks and leptons	18
		1.3.1 Lepton flavour	18
		1.3.2 Quark flavour	21
2	Part	ticle Interactions in the Standard Model	28
	2.1	Introduction	28
	2.2	The Yukawa theory of force as virtual quantum exchange	30
	2.3	The one-quantum exchange amplitude	34
	2.4	Electromagnetic interactions	35
	2.5	Weak interactions	37
	2.6	Strong interactions	40
	2.7	Gravitational interactions	44
	2.8	Summary	48
		Problems	49
3	Elec	tromagnetism as a Gauge Theory	53
	3.1	Introduction	53
	3.2	The Maxwell equations: current conservation	54
	3.3	The Maxwell equations: Lorentz covariance and gauge invariance	56
	3.4	Gauge invariance (and covariance) in quantum mechanics	60
	3.5	The argument reversed: the gauge principle	63
	3.6	Comments on the gauge principle in electromagnetism	67
		Problems	73

4	Rela	tivistic	Quantum Mechanics	74
	4.1	The K	lein-Gordon equation	74
		4.1.1	Solutions in coordinate space	75
		4.1.2	Probability current for the KG equation	76
	4.2	The D	irac equation	77
		4.2.1		80
		4.2.2	Probability current for the Dirac equation	81
	4.3	Spin	•	82
	4.4	-	z transformation properties of spinors	85
	4.5		egative-energy solutions	91
			Positive-energy spinors	92
			Negative-energy spinors	92
			Dirac's interpretation of the negative-energy solutions of	
			the Dirac equation	93
		4.5.4	Feynman's interpretation of the negative-energy solutions	
			of the KG and Dirac equations	95
	4.6	Inclus	ion of electromagnetic interactions via the gauge principle:	
			rac prediction of $g = 2$ for the electron	98
		Proble	-	101

PART 2 INTRODUCTION TO QUANTUM FIELD THEORY

5	Qua	ntum Field Theory I: the Free Scalar Field	109
	5.1	The quantum field: (i) descriptive	109
	5.2	The quantum field: (ii) Lagrange–Hamilton formulation	119
		5.2.1 The action principle: Lagrangian particle mechanics	119
		5.2.2 Quantum mechanics à la Heisenberg-Lagrange-Hamilton	122
		5.2.3 Interlude: the quantum oscillator	124
		5.2.4 Lagrange–Hamilton classical field mechanics	127
		5.2.5 Heisenberg-Lagrange-Hamilton quantum field mechanics	129
	5.3	Generalizations: four dimensions, relativity and mass	136
		Problems	139
6	Qua	ntum Field Theory II: Interacting Scalar Fields	141
	6.1	Interactions in quantum field theory: qualitative introduction	141
	6.2	Perturbation theory for interacting fields: the Dyson expansion of	
		the S-matrix	144
		6.2.1 The interaction picture	145
		6.2.2 The S-matrix and the Dyson expansion	147
	6.3	Applications to the 'ABC' theory	150
		6.3.1 The decay $C \rightarrow A + B$	151
		6.3.2 $A + B \rightarrow A + B$ scattering: the amplitudes	155

viii

CONTENTS

	6.3.3 $A + B \rightarrow A + B$ scattering: the Yukawa exchange	
	mechanism, s and u channel processes	164
	6.3.4 $A + B \rightarrow A + B$ scattering: the differential cross section	166
	6.3.5 $A + B \rightarrow A + B$ scattering: loose ends	168
	Problems	171
Qua	ntum Field Theory III: Complex Scalar Fields, Dirac and	
Max	well Fields; Introduction of Electromagnetic Interactions	173
7.1	The complex scalar field: global U(1) phase invariance, particles	
	and anti-particles	174
7.2	The Dirac field and the spin-statistics connection	181
7.3	The Maxwell field $A^{\mu}(x)$	186
	7.3.1 The classical field case	186
	7.3.2 Quantizing $A^{\mu}(x)$	189
7.4	Introduction of electromagnetic interactions	195
	Problems	200

PART 3

7

TREE-LEVEL APPLICATIONS IN QED

8	Eler	nentary	Processes in Scalar and Spinor Electrodynamics	205
	8.1	Coulo	mb scattering of charged spin-0 particles	205
		8.1.1	Coulomb scattering of s ⁺ (wavefunction approach)	205
		8.1.2	Coulomb scattering of s ⁺ (field-theoretic approach)	208
		8.1.3	Coulomb scattering of s ⁻	209
	8.2	Coulo	mb scattering of charged spin- $\frac{1}{2}$ particles	210
		8.2.1	Coulomb scattering of e ⁻ (wavefunction approach)	210
		8.2.2	Coulomb scattering of e ⁻ (field-theoretic approach)	213
		8.2.3	Trace techniques for spin summations	214
		8.2.4	Coulomb scattering of e ⁺	217
	8.3	e ⁻ s ⁺ s	scattering	218
			The amplitude for $e^-s^+ \rightarrow e^-s^+$	218
		8.3.2	The cross section for $e^{-}s^{+} \rightarrow e^{-}s^{+}$	223
	8.4	8.4 Scattering from a non-point-like object: the pion form factor		
		$e^{-}\pi^{+}$	$\rightarrow e^{-}\pi^{+}$	225
			Rutherford scattering from a charge distribution	225
		8.4.2	Lorentz invariance	227
		8.4.3		228
	8.5		factor in the time-like region: $e^+e^- \rightarrow \pi^+\pi^-$ and	
			ng symmetry	230
	8.6		on Compton scattering	233
			The lowest-order amplitudes	233
			Gauge invariance	234
		8.6.3	The Compton cross section	235

ix

	8.7	Electron muon elastic scattering	237
		Electron-proton elastic scattering and nucleon form factors	240
		8.8.1 Lorentz invariance	241
		8.8.2 Current conservation	241
		Problems	244
9	Deep	Inelastic Electron-Nucleon Scattering and the Quark Parton	
	Mod	el	249
	9.1	Inelastic electron-proton scattering: kinematics and structure	
		functions	249
	9.2	Bjorken scaling and the parton model	252
		The quark parton model	260
		The Drell–Yan process	262
	9.5	e ⁺ e ⁻ annihilation into hadrons	267
		Problems	272
	PAR		
		PPS AND RENORMALIZATION	
10	_	s and Renormalization I: the ABC Theory	279
	10.1	The propagator correction in ABC theory	280
		10.1.1 The $O(g^2)$ self-energy $\Pi_{\mathbf{C}}^{[2]}(q^2)$	280
		10.1.2 Mass shift	287
		10.1.3 Field strength renormalization	288
		The vertex correction	291
	10.3	Dealing with the bad news: a simple example	293
		10.3.1 Exposure of the divergence in $\Pi_{C}^{[2]}(q^2)$	293
		10.3.2 Regularization and renormalization	296
	10.4	Bare and renormalized perturbation theory	297
		10.4.1 Reorganizing perturbation theory	297
		10.4.2 The $O(g_{ph}^2)$ renormalized self-energy revisited: how counter terms are determined by renormalization	
		conditions	300
	10.5	Renormalizability	303
		Problems	304
11		ps and Renormalization II: QED	306
		Counter terms	306
		The $O(e^2)$ fermion self-energy	308
		The $O(e^2)$ photon self-energy	309
	11.4	The $O(e^2)$ renormalized photon self-energy	312
	11.5	The physics of $\tilde{\Pi}_{\gamma}^{[2]}(q^2)$	314
		11.5.1 Modified Coulomb's law	315
			~ * *

11.5.2 Radiatively induced charge form factor

х

CONTENTS

11.5.3 The ru	nning coupling constant	317
11.5.4 $\bar{\Pi}_{\nu}^{[2]}$ in	the s-channel	322
11.6 The $O(e^2)$ ver	tex correction, and $Z_1 = Z_2$	323
11.7 The anomalous	s magnetic moment and tests of QED	326
11.8 Which theories	s are renormalizable—and does it matter?	329
Problems		336
Appendix A Non	-relativistic Quantum Mechanics	338
Appendix B Natu	ral Units	342
Appendix C Max	well's Equations: Choice of Units	345
Appendix D Spec	cial Relativity: Invariance and Covariance	347
Appendix E Dira	c δ-Function	352
Appendix F Con	tour Integration	360
Appendix G Gree	en Functions	366
Appendix H Eler	nents of Non-relativistic Scattering Theory	372
H.1 Time-independ	lent formulation and differential cross section	372
H.2 Expression for	the scattering amplitude: Born approximation	374
H.3 Time-depende	nt approach	375
-	Schrödinger and Heisenberg Pictures	377
Appendix I The S	Schrödinger and Heisenberg Pictures c Algebra and Trace Identities	377 379
