# HOW TO ANTICIPATE LIFESTYLES CHANGES BROUGHT ABOUT BY AUTONOMOUS VEHICLES?

*Insights from an analysis of methods*

Thomas LE GALLIC

November 19 & 20, 2018

swiss mobility  
conference

IFSTTAR

L<sup>L</sup>V<sup>V</sup>M<sup>M</sup>T<sup>T</sup> Laboratoire  
Ville  
Mobilité  
Transport

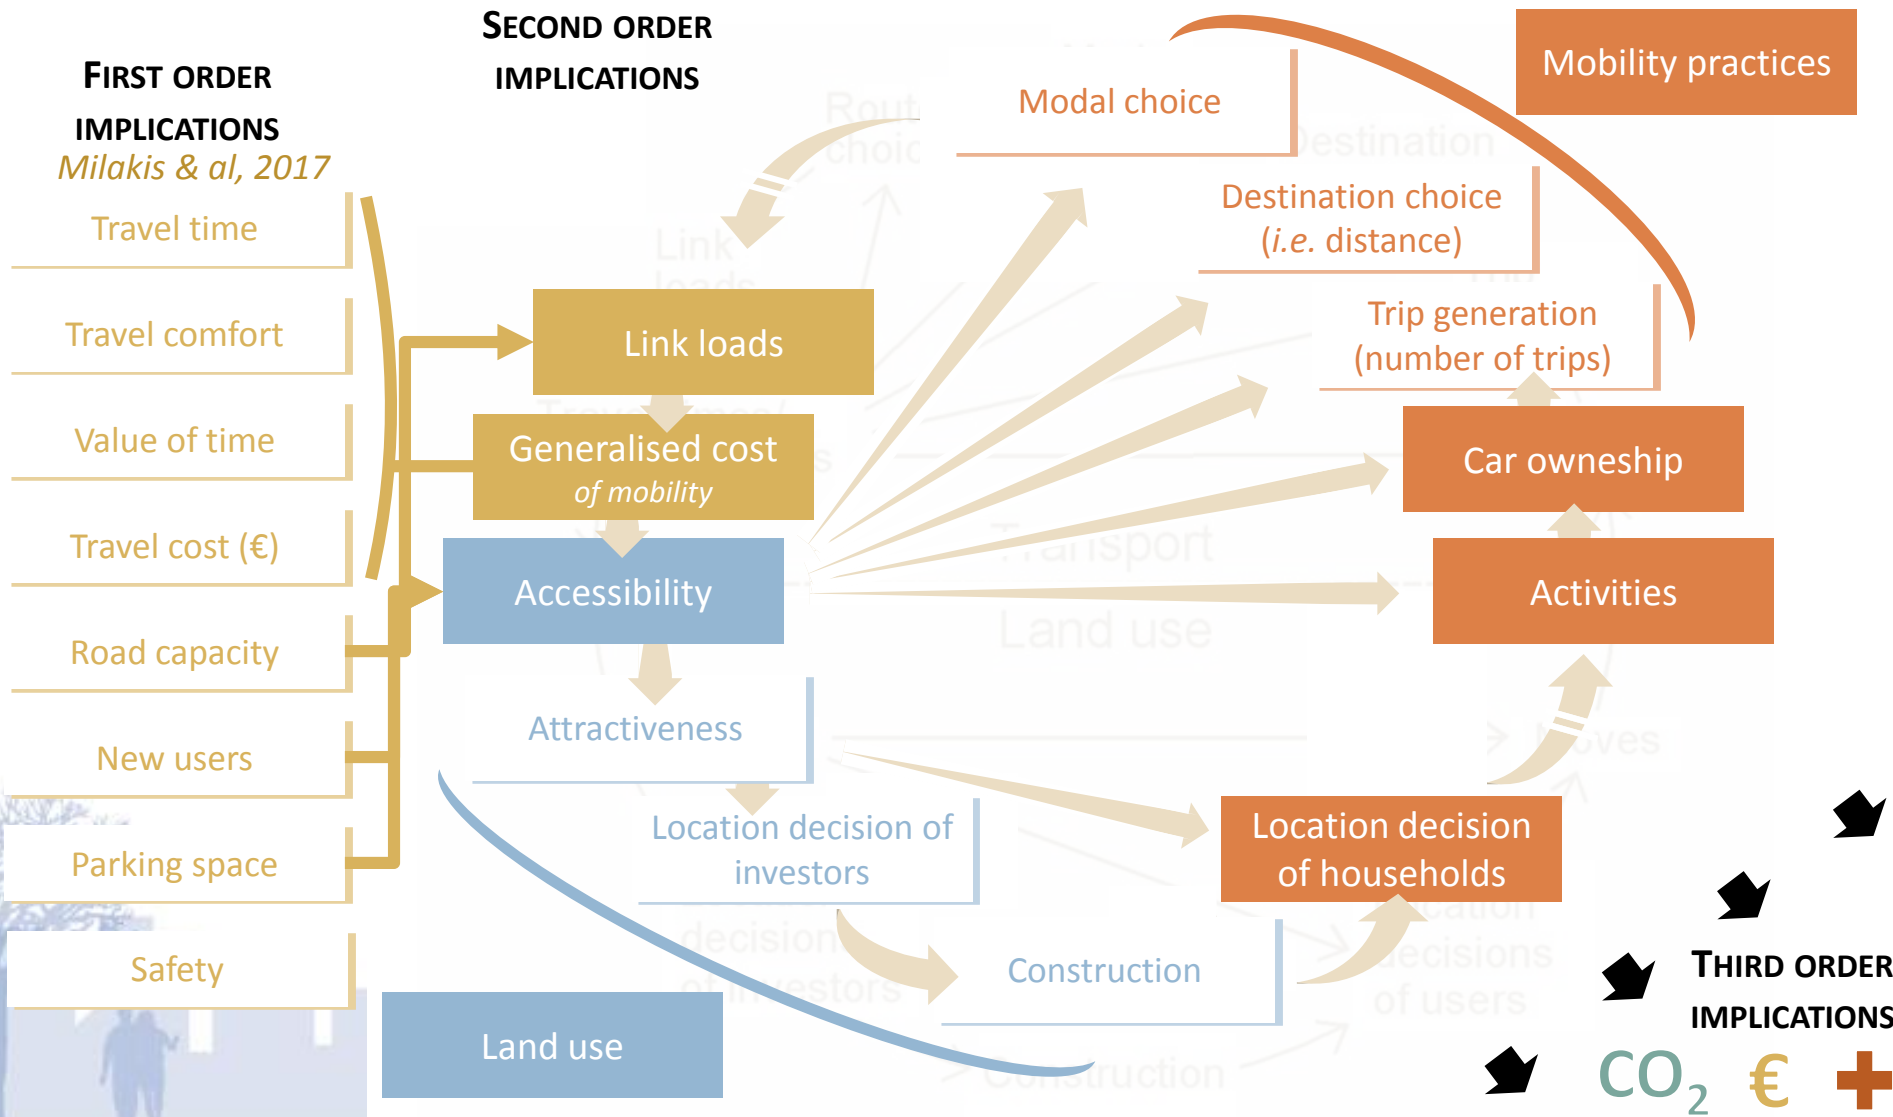

## INTRODUCTION & READING GRID

*WHAT MIGHT BE THE IMPLICATIONS OF AUTONOMOUS CARS FOR LIFESTYLES?*

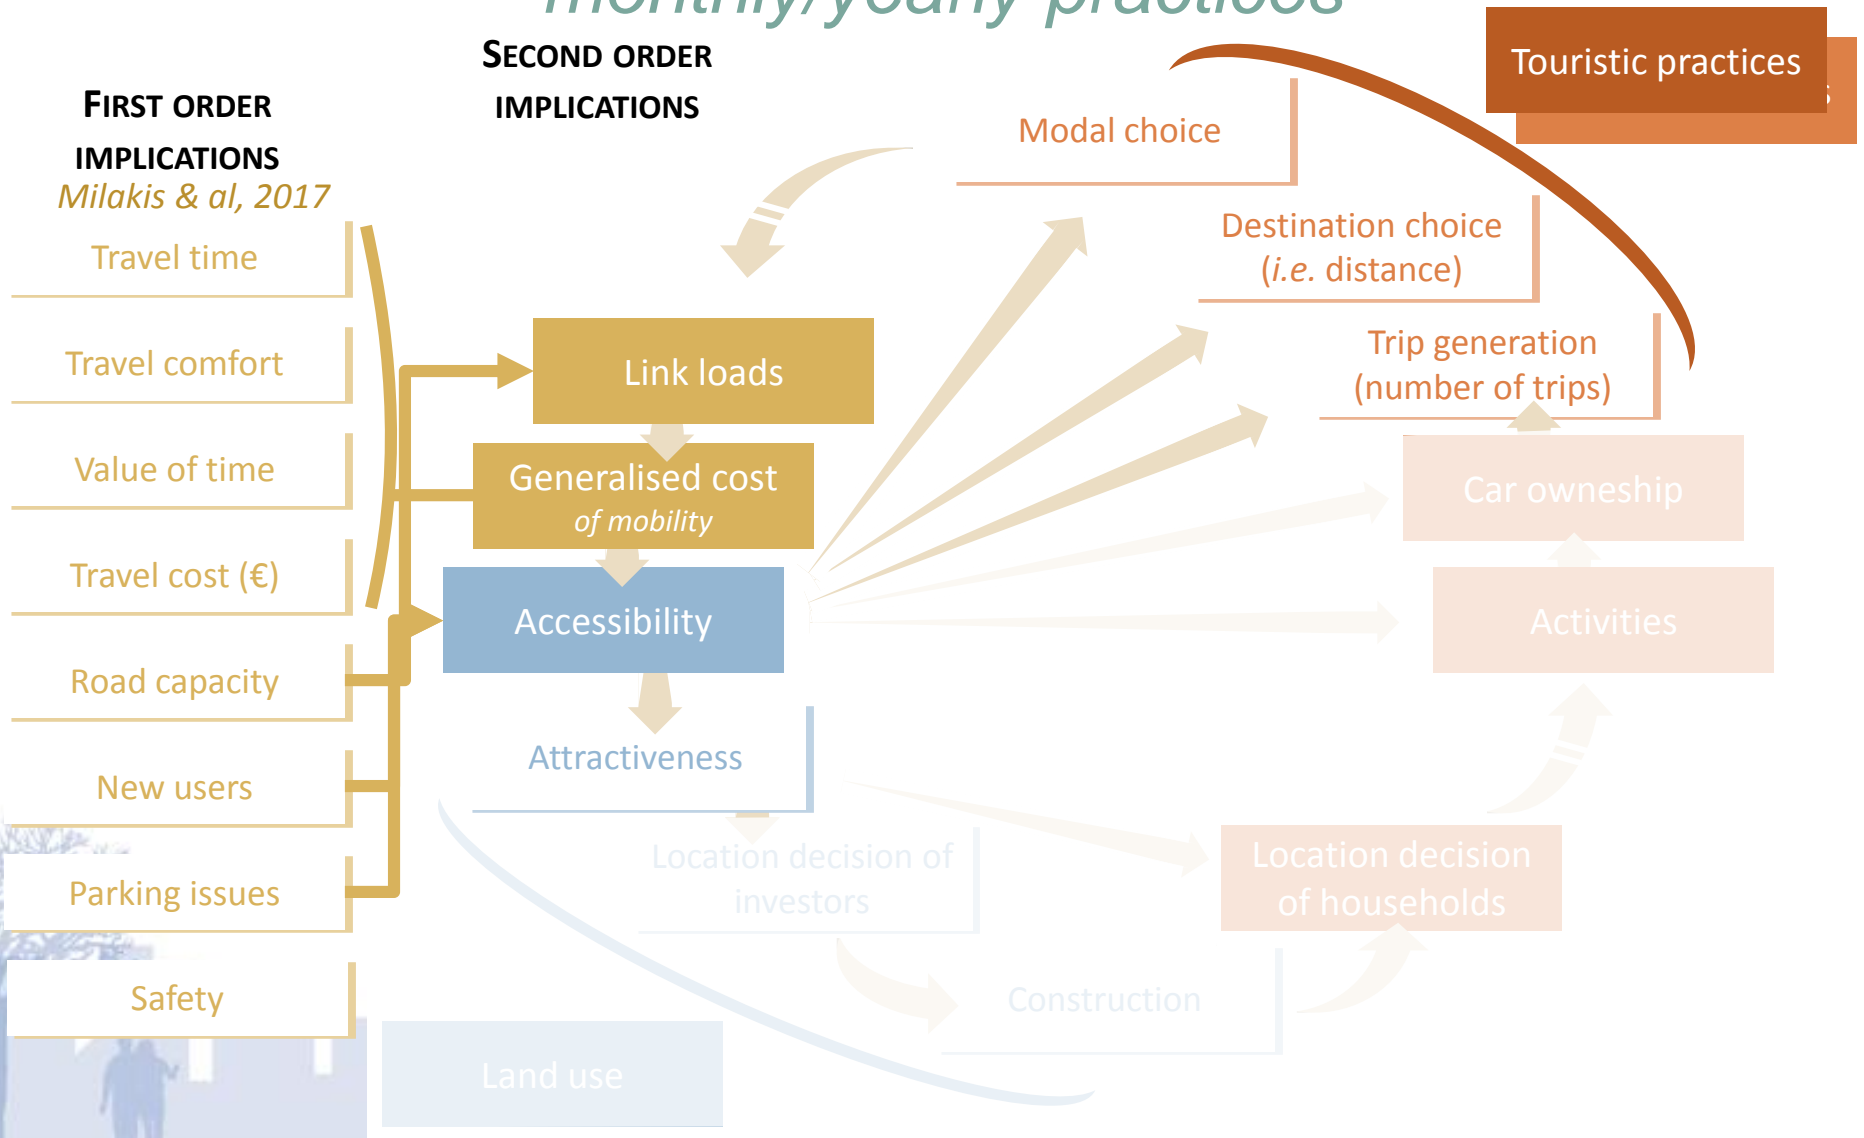

# Direct and indirect implications

## *daily practices*

# Direct and indirect implications

*monthly/yearly practices*

# A reading grid of these implications

## *Five components of lifestyles*

<b>MOBILITY PRACTICES</b>		
<b>CAR OWNERSHIP</b>		
<b>RESIDENTIAL LOCATION</b>		
<b>ACTIVITIES</b>		
<b>TOURISTIC PRACTICES</b>		

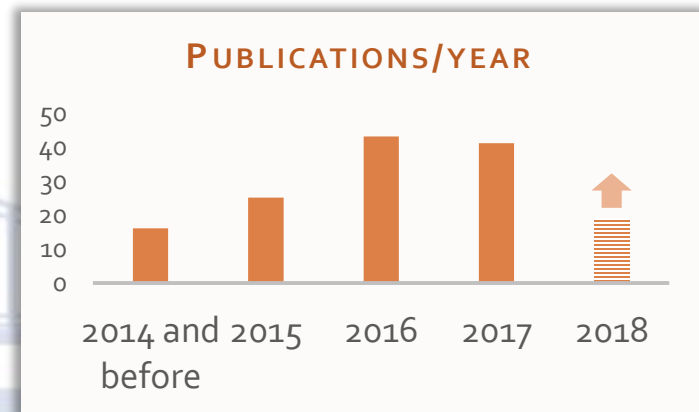

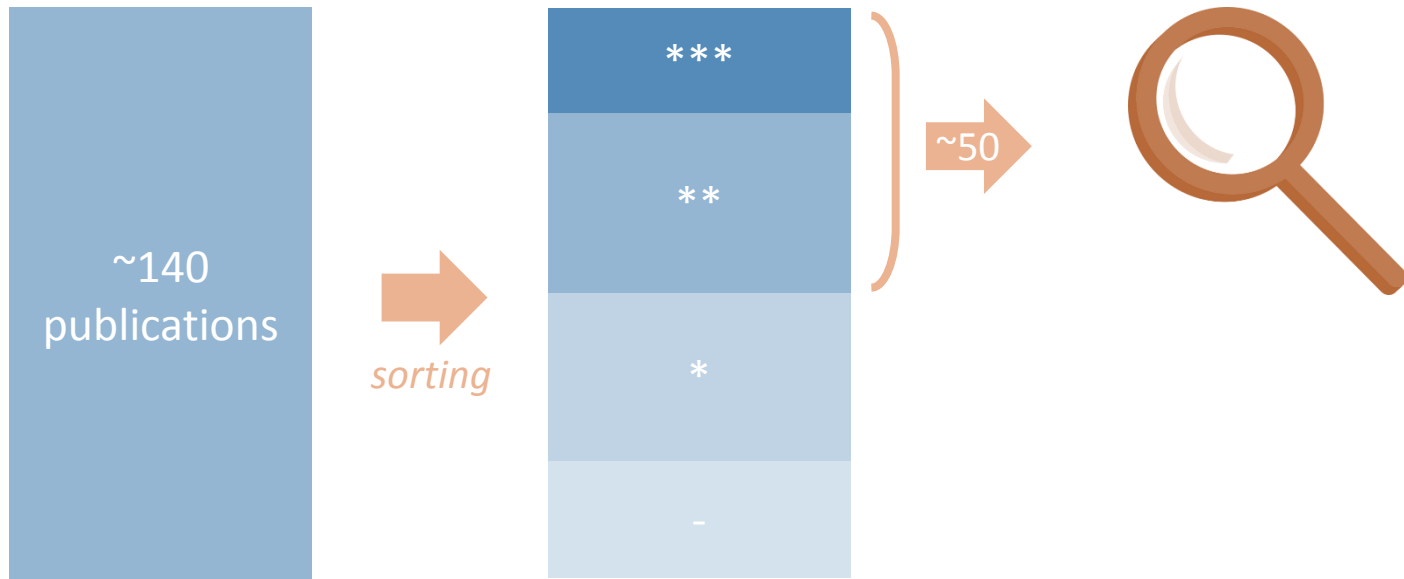

# CORPUS

*ANALYSING EXISTING RESEARCH*

[www.ifsttar.fr](http://www.ifsttar.fr)

# Corpus

**CHALLENGE** | *Anticipating future human behaviors  
and social organisation*

## ANALYSIS

*HOW TO ANTICIPATE LIFESTYLE CHANGES BROUGHT ABOUT BY  
THE DIFFUSION OF AN UNAVAILABLE TECHNOLOGY?*

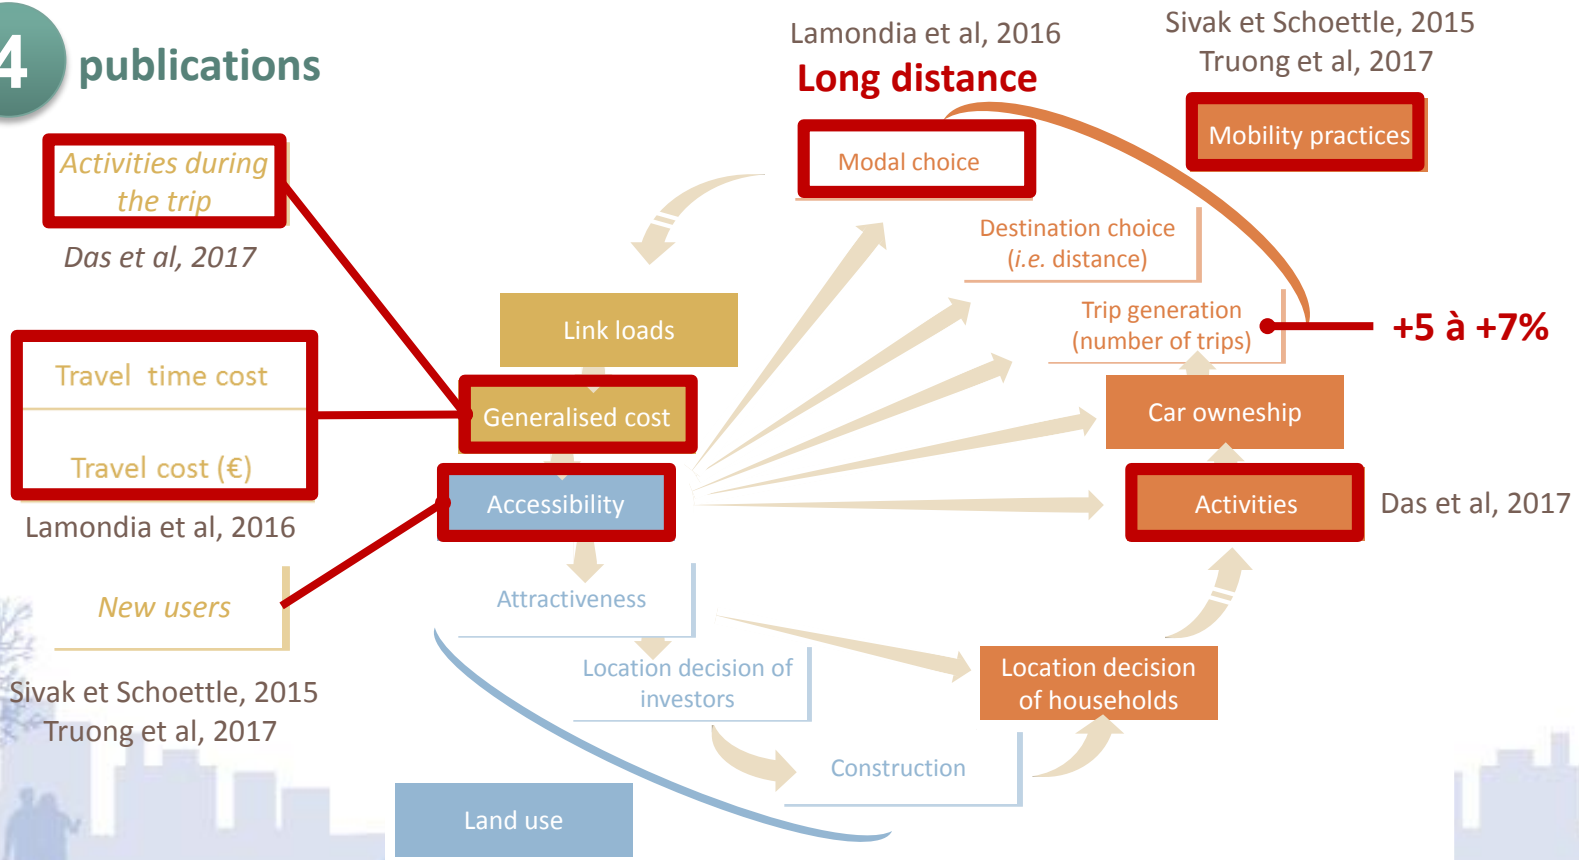

**4 GROUPS OF METHODS**

# I. Extrapolations: *considering analogies*

**Rationale:** use of existing data on current behaviours in order to identify analogies, to consider current practices as **proxies** for future ones

**4** publications

# II. Modelling approaches (1)

**Rationale:** simulating new services/new modes through modelling framework

TYPE 1

**MOBILITY  
PRACTICES**

New services are simulated with **mobility and transportation models**

- with new values to "value of time", "road capacity", "travel time" parameters
- Results are expressed in terms of **mobility practices**, and/or fleet size

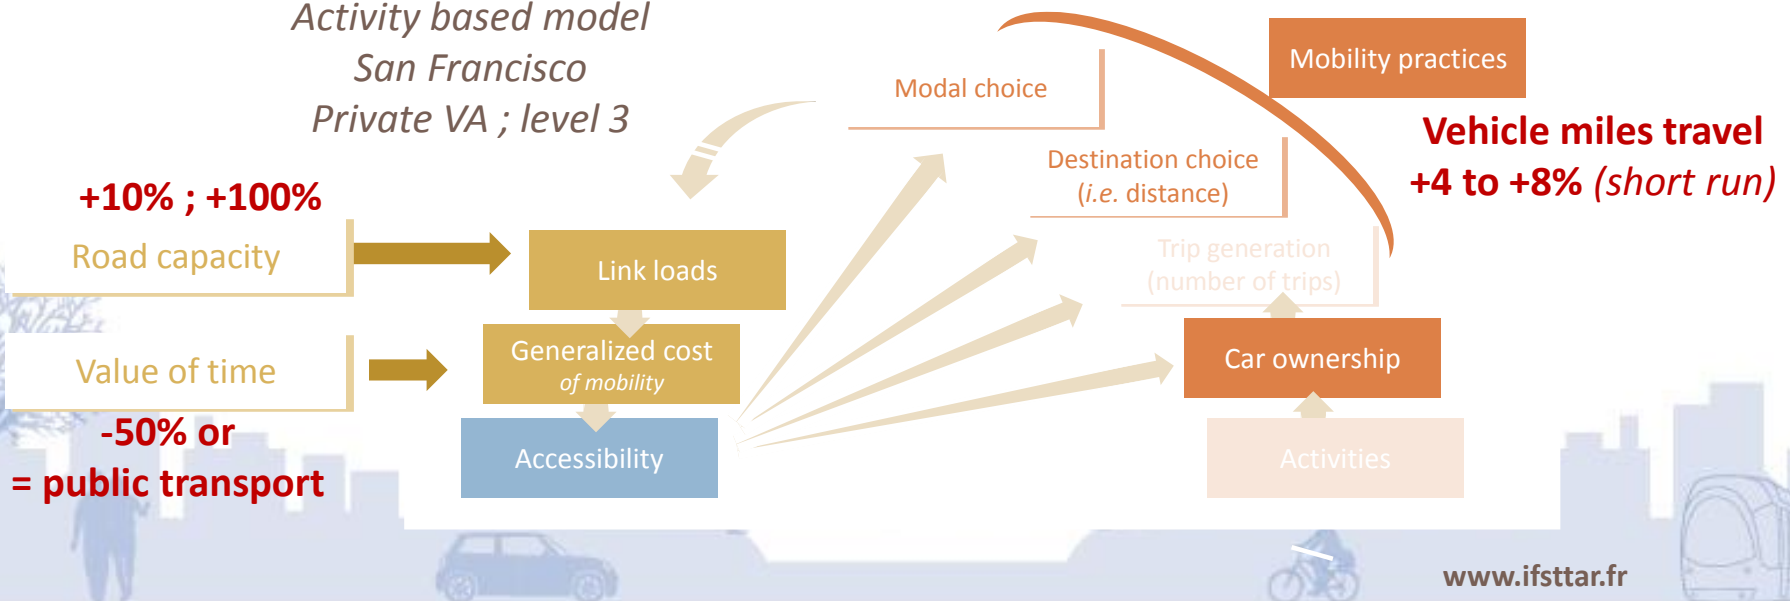

## Example

**Gucwa, 2014**

*Activity based model*

*San Francisco*

*Private VA ; level 3*

# II. Modelling approaches (1)

**Rationale:** simulating new services/new modes through modelling framework

TYPE 1

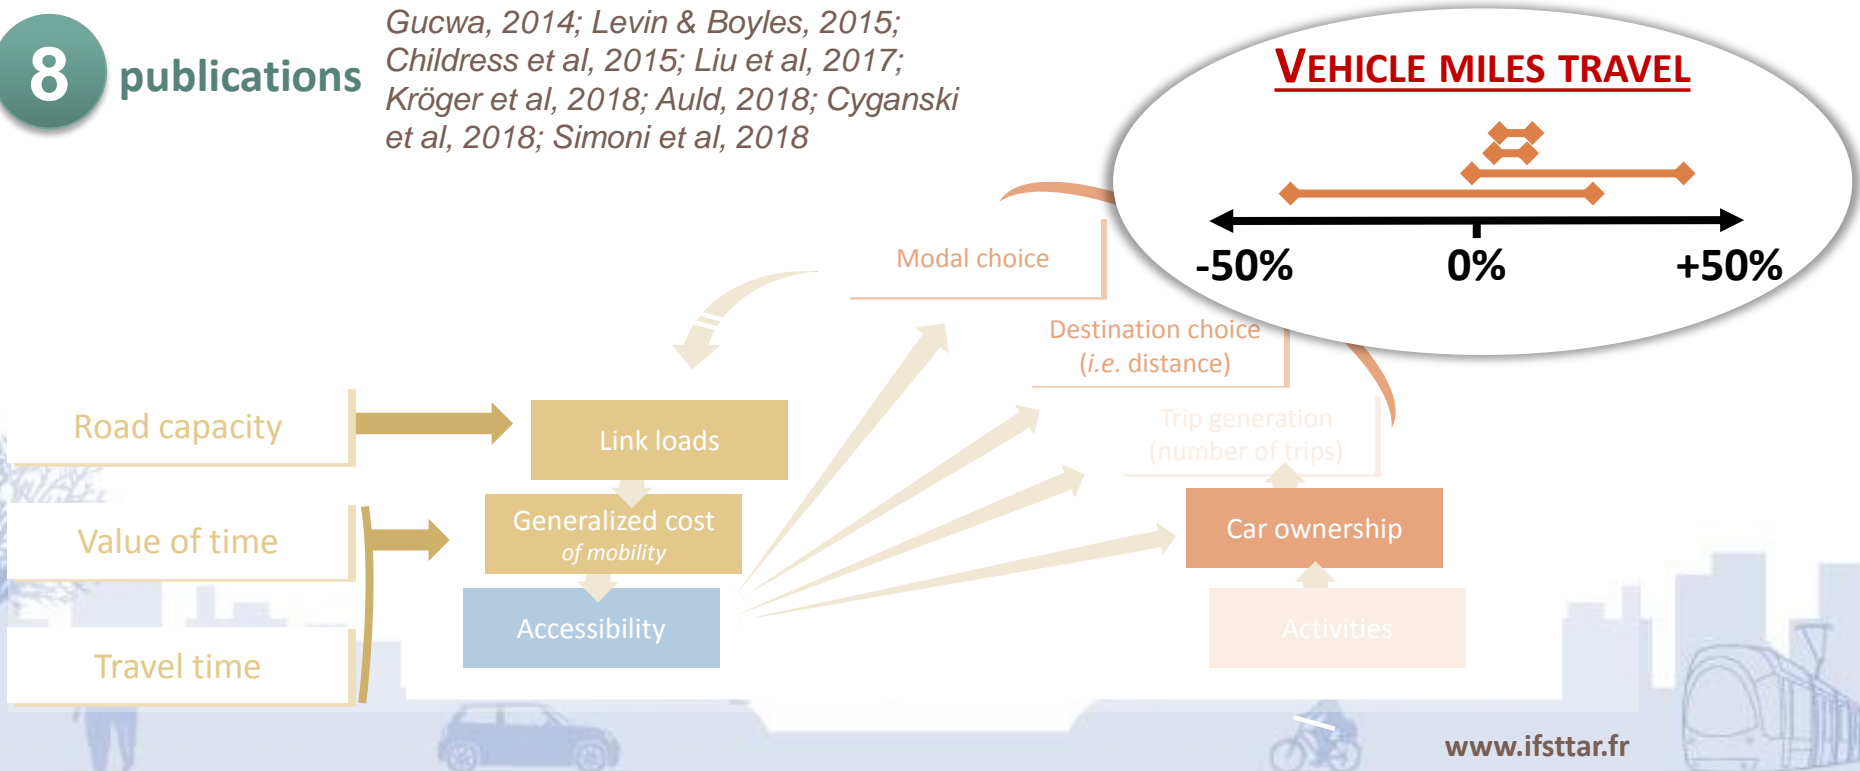

MOBILITY  
PRACTICES

New services are simulated with **mobility and transportation models**

- with new values to "value of time", "road capacity", "travel time" parameters
- Results are expressed in terms of **mobility practices**, and/or fleet size

8 publications

*Gucwa, 2014; Levin & Boyles, 2015; Childress et al, 2015; Liu et al, 2017; Kröger et al, 2018; Auld, 2018; Cyganski et al, 2018; Simoni et al, 2018*

# II. Modelling approaches (2)

**Rationale:** simulating new services/new modes through modelling framework

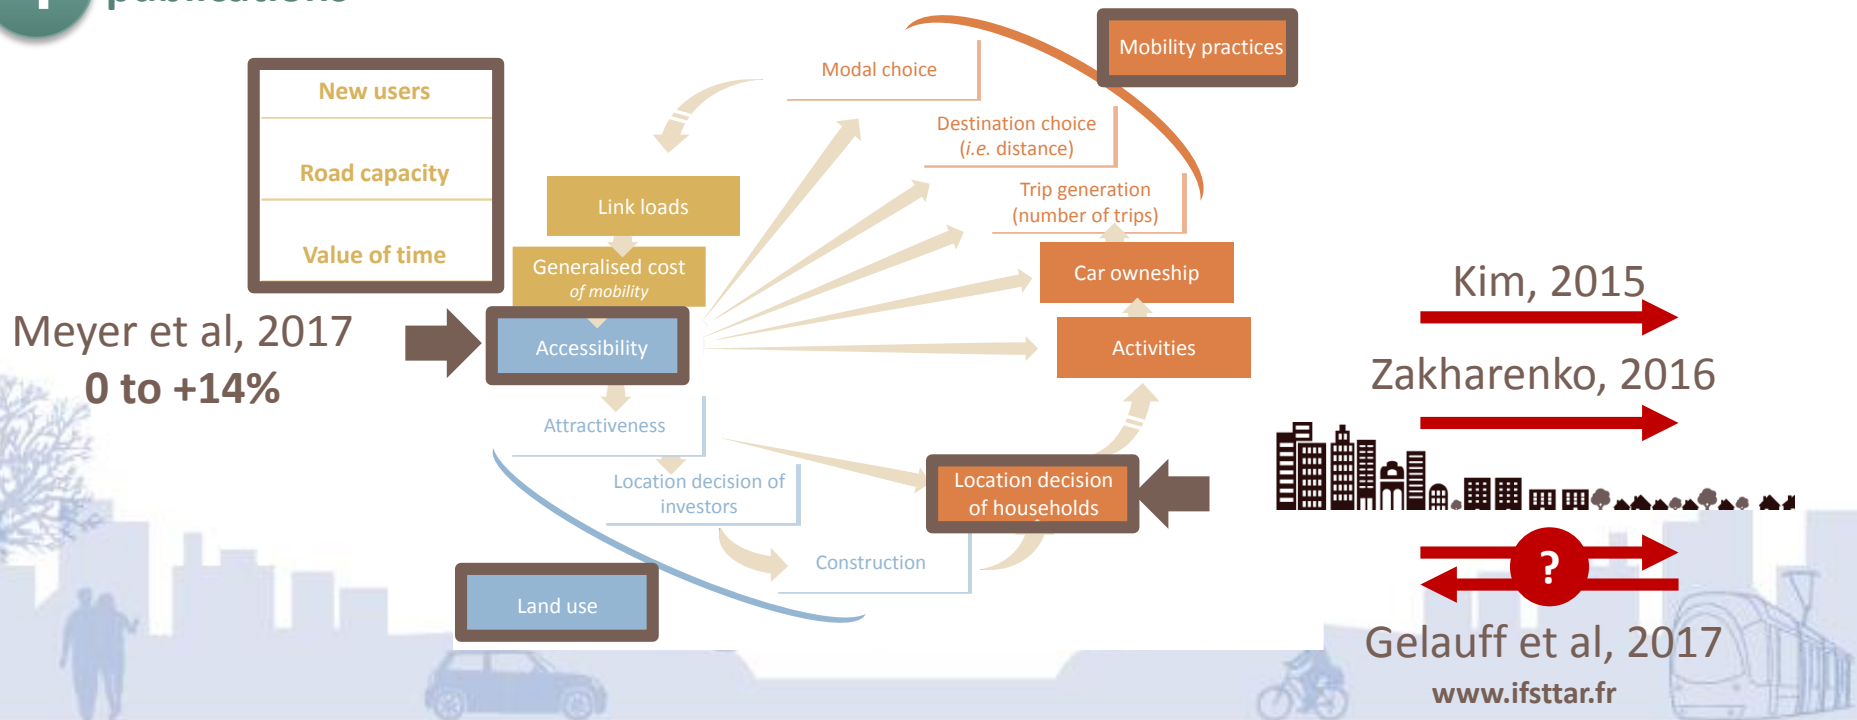

TYPE 2

**SPATIAL  
IMPLICATIONS**

New services are simulated with **land use / transportation models**

- new values for "value of time", "road capacity" parameters (and "new users")
- Results are expressed in terms of **spatial dynamics, residential location, or accessibility**

**4** publications

# II. Modelling approaches (3)

**Rationale:** simulating new services/new modes through modelling framework

TYPE 3

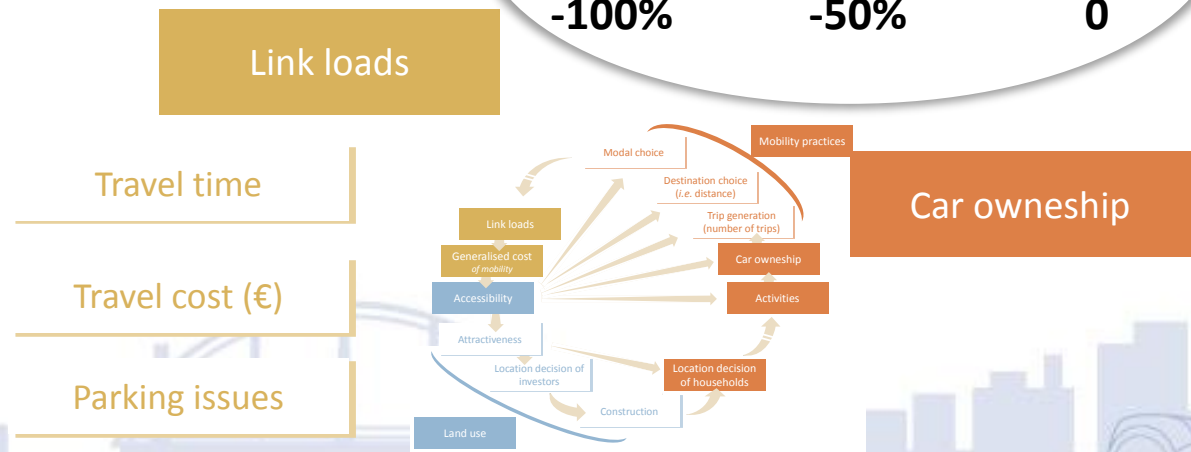

OPTIMISING  
NEW SERVICES

New services are simulated through **operationnal research**

- The simulated service have to satisfy a mobility demand (which is an input)
- Results are expressed in terms of **fleet size**, performance of the service: **travel time**, waiting time, empty vehicule-miles, economic profitability, ...

**11** publications

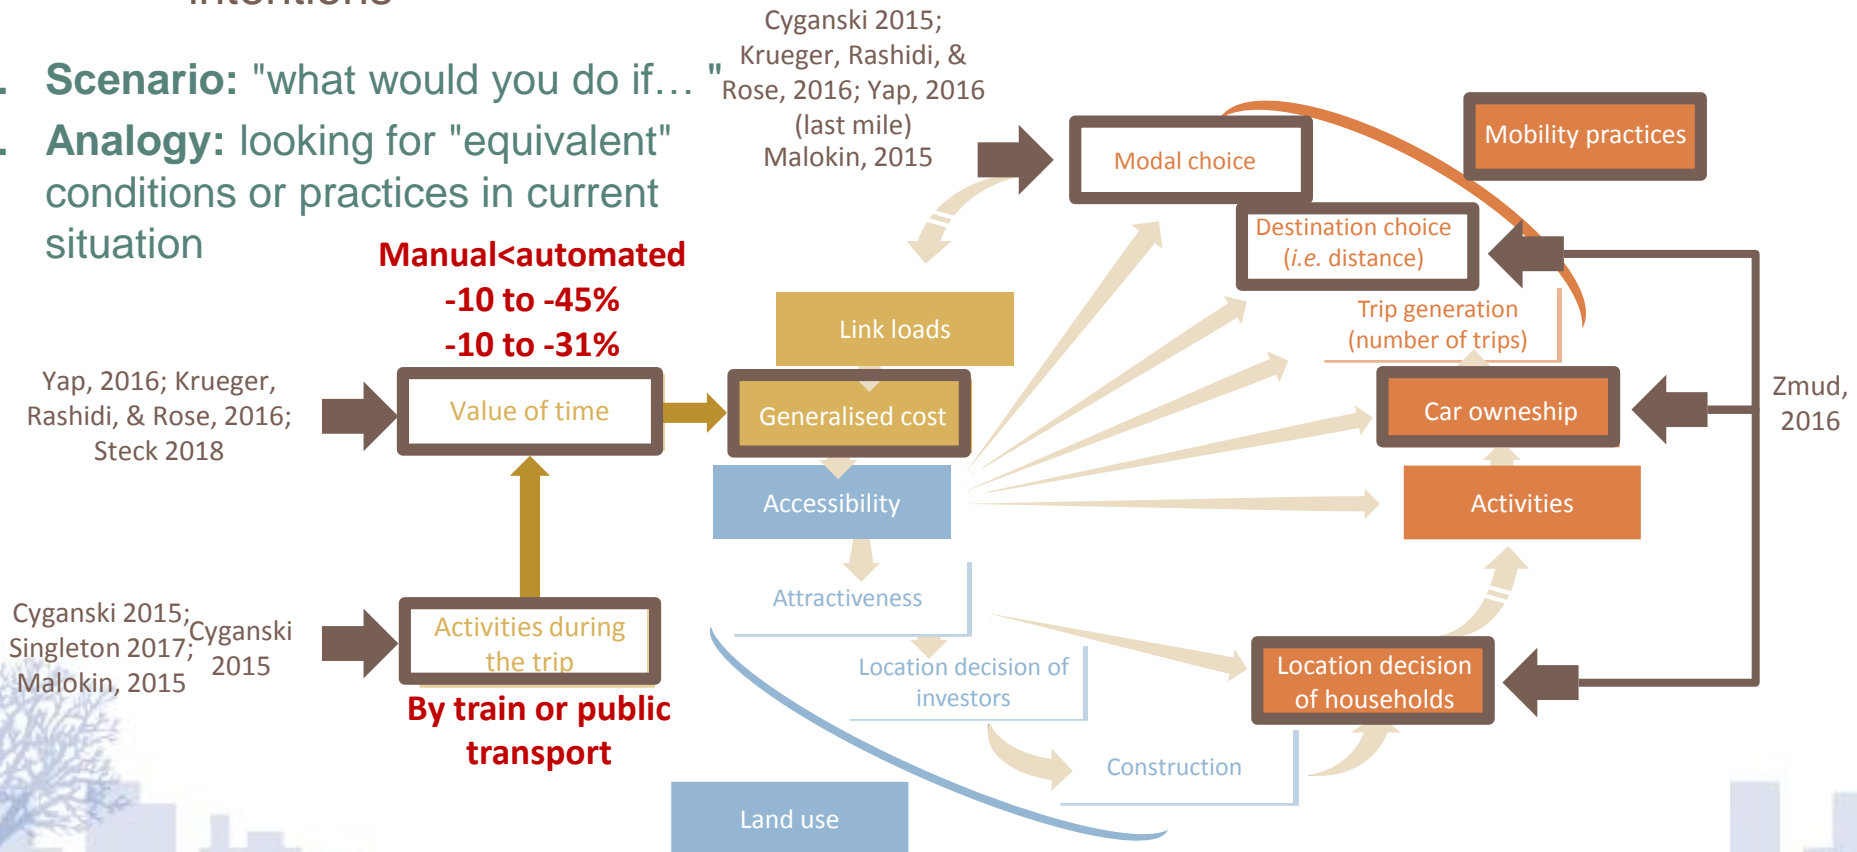

Fagnant et Kockelman, 2014; Spieser et al, 2014  
 Itf, 2015; Zhang et al, 2015  
 Liang et al, 2016 ; Correia et al, 2016; Boesch et  
 al, 2016; Chen et al, 2016; Fagnant et  
 Kockelman, 2016  
 Masoud et Jayakrishnan, 2017  
 Kong et al 2018

# III. Surveys: "asking people of today"

- **Rationale:** surveying people about their current practices, perceptions and intentions

1. **Scenario:** "what would you do if..."
2. **Analogy:** looking for "equivalent" conditions or practices in current situation

8 publications

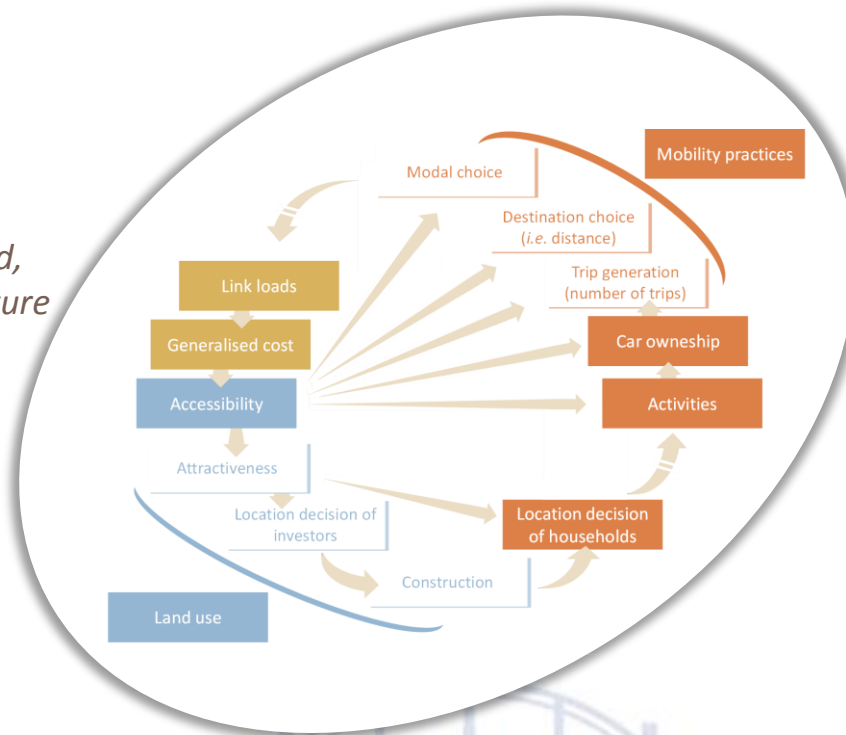

# IV. Scenario planning methods

**Rationale:** developing a conceptual representation of the system in order to discuss and assess implications of the widespread autonomous car deployment

**5** publications

## INPUT

*Expertise, questions, method, conceptual framework, literature review, weak signals*

## OUTPUT

*Risk analysis (Saujot et al, 2018)  
Quantitative estimations (Brenden et al, 2017; Milakis et al, 2017b)  
Identification of critical decisions (Papa and Ferreira, 2018)  
Qualitative analysis (Gruel and Stanford, 2016)*

*Better understanding of the system*

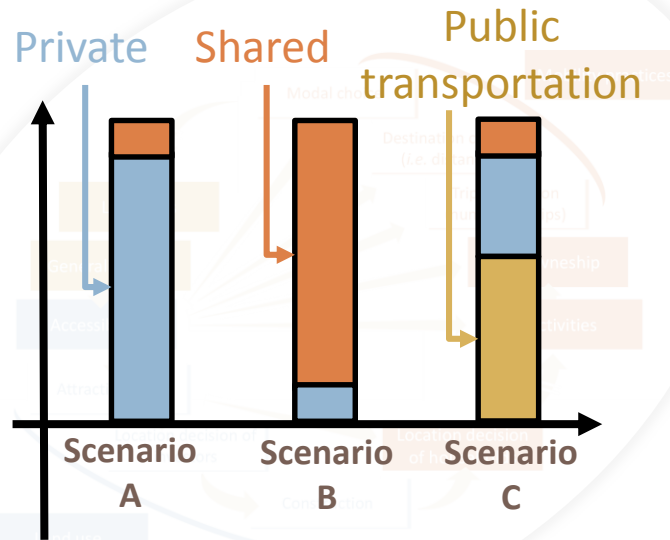

# IV. Scenario planning methods

**Rationale:** developing a conceptual representation of the system in order to discuss and assess implications of the widespread autonomous car deployment

**5** publications

## INPUT

*Expertise, questions, method, conceptual framework, literature review, weak signals*

## OUTPUT

*Risk analysis (Saujot et al, 2018)*  
*Quantitative estimations (Brenden et al, 2017; Milakis et al, 2017b)*
