## Executive Summary

The percent of Nebraska's population that is foreign born has steadily increased during the past decade. In fact, its growth in foreign born population since 2010 ranks in the top 10 among all states. Given these changes, are rural Nebraskans aware of recent immigrants in their community? How do they perceive immigrants and their impacts on rural Nebraska? How do they view various immigration policies? This paper provides a detailed analysis of these questions.

This report details 1,776 responses to the 2019 Nebraska Rural Poll, the $24^{\text {th }}$ annual effort to understand rural Nebraskans' perceptions. Respondents were asked a series of questions about immigration. Trends for some of the questions are examined by comparing data from the 2006 Rural Poll. In addition, comparisons are made among different respondent subgroups, that is, comparisons by age, occupation, region, etc. Based on these analyses, some key findings emerged:

- Most rural Nebraskans are aware of recent immigrants in their community. Almost six in ten rural Nebraskans (57\%) are aware of recent immigrants from Mexico in their community. Just over one-quarter (27\%) are aware of recent immigrants from Central America. Fewer rural Nebraskans are aware of recent immigrants in their community from South America, Asia, Europe or Africa. However, over 40 percent of respondents said they don't know if there are recent immigrants in their community from the following regions: Central America, South America, Asia, Europe and Africa.
$\checkmark$ Persons living in or near larger communities are more likely than persons living in or near smaller communities to say they are aware of recent immigrants in their community from each of the regions listed. As an example, 71 percent of persons living in or near the largest communities say they are aware of recent immigrants from Mexico in their community. In comparison, 41 percent of persons living in or near the smallest communities say they are aware of recent Mexican immigrants in their community.
- Rural Nebraskans have mixed opinions about the impact of immigration on rural Nebraska.

Just under four in ten (38\%) agree that immigrants strengthen rural Nebraska, while three in ten (30\%) disagree. And, one-third (33\%) agree that on balance immigration has been good for rural Nebraska, while 27 percent disagree. At least one-third of rural Nebraskans neither agreed nor disagreed with both statements.
$\checkmark$ Persons living in or near larger communities are more likely than persons living in or near smaller communities to agree that immigrants strengthen rural Nebraska. Almost one-half ( $48 \%$ ) of persons living in or near the largest communities agree with that statement, compared to approximately 28 percent of persons living in or near communities with populations under 1,000 . Persons living in or near the smallest communities are more likely than persons living in or near larger communities to neither agree nor disagree with the statement.
$\checkmark$ Younger persons are more likely than older persons to agree that immigrants strengthen rural Nebraska. Just over one-half (53\%) of persons age 19 to 29 agree with the statement, compared to 31 percent of persons age 65 and older.

- Rural Nebraskans are concerned about language issues with immigrants. Most rural Nebraskans (84\%) agree with the statement that immigrants should learn to speak English within a reasonable amount of time. In addition, one-half of rural Nebraskans disagree that communities should communicate important information in other languages as well as English.
$\checkmark$ Persons living in or near the largest communities are more likely than persons living in or near the smallest communities to agree that rural Nebraska communities should communicate important information in other languages as well as English. Approximately one-third of persons living in or near communities with populations of 5,000 or more agree with that statement, compared to 19 percent of persons living in or near the smallest communities.
- Many rural Nebraskans are concerned about the effect illegal immigration may have on wages. Over four in ten (44\%) agree that undocumented immigrants drive down wages in rural Nebraska. Just under one-quarter (23\%) disagree with the statement and one-third neither agree nor disagree.
$\checkmark$ Persons with lower education levels are more likely than persons with more education to agree that undocumented immigrants drive down wages in rural Nebraska. Approximately one-half ( $50 \%$ ) of persons with less than a four-year college degree agree with that statement, compared to 36 percent of persons with at least a bachelor's degree.
- Opinions are mixed on the reception immigrants receive from communities. Approximately one-third (32\%) agree that rural Nebraska communities do a lot to include immigrants into the community while 21 percent disagree. Almost one-half (47\%) neither agree nor disagree with that statement.
- Most rural Nebraskans agree with policies that try to prevent illegal immigration. Almost three-quarters (74\%) of rural Nebraskans agree that government should tighten the borders to prevent illegal immigration. Three-quarters ( $75 \%$ ) agree that businesses that employ undocumented workers should be penalized. Almost two-thirds (65\%) agree that undocumented immigrants should be deported. And, a similar percentage (64\%) disagree that the government is too aggressive in deporting those who are in this country illegally.
- Many rural Nebraskans also support a pathway to citizenship for undocumented workers. Over six in ten (62\%) agree that an undocumented immigrant who has been working and paying taxes for five years or more should be allowed to apply for citizenship. Just under six in ten ( $57 \%$ ) agree that there should be a way for undocumented immigrants who meet certain requirements to stay in the country legally. And, seven in ten (70\%) agree that immigrants who were brought to the U.S. illegally as children should be allowed the chance to become U.S. citizens if they meet certain requirements over a period of time.
- Opinions are mixed on if the existing guest-worker program should be expanded to better allow immigrants to work in agriculture without becoming U.S. citizens. Just under four in ten (36\%) agree with that statement and the same percentage disagree.
- Many opinions about immigration policies remain about the same as they were in 2006. However, fewer rural Nebraskans today support the government tightening the borders to prevent illegal immigration than they did in 2006. In 2006, 83 percent of rural Nebraskans agreed that the government should tighten the borders to prevent illegal immigration. In 2019, this percentage fell to 74 percent. And, the proportion who agree that an undocumented immigrant who has been working and paying taxes for five years or more should be allowed to apply for citizenship increased slightly from 58 percent in 2006 to 62 percent this year.

## Introduction

The percent of Nebraska's population that is foreign born has steadily increased during the past decade. In fact, its growth in foreign born population since 2010 ranks in the top 10 among all states. Given these changes, are rural Nebraskans aware of recent immigrants in their community? How do they perceive immigrants and their impacts on rural Nebraska? How do they view various immigration policies? This paper provides a detailed analysis of these questions.

This report details 1,776 responses to the 2019 Nebraska Rural Poll, the $24^{\text {th }}$ annual effort to understand rural Nebraskans' perceptions. Respondents were asked a series of questions about immigration.

## Methodology and Respondent Profile

This study is based on 1,776 responses from Nebraskans living in 86 counties in the state. ${ }^{1}$ A self-administered questionnaire was mailed in March and April to 6,260 randomly selected households. Metropolitan counties not included in the sample were Cass, Douglas, Lancaster, Sarpy, Saunders, Seward and Washington. The 14-page questionnaire included questions pertaining to well-being, community, community involvement and leadership, immigration and education. This paper reports only results from the immigration section.

A $28 \%$ response rate was achieved using the total design method (Dillman, 1978). The sequence of steps used follow:

[^0]1. A pre-notification letter was sent requesting participation in the study.
2. The questionnaire was mailed with an informal letter signed by the project manager approximately ten days later.
3. A reminder postcard was sent to those who had not yet responded approximately ten days after the questionnaire had been sent.
4. Those who had not yet responded within approximately 20 days of the original mailing were sent a replacement questionnaire.

Appendix Table 1 shows demographic data from this year's study and previous rural polls, as well as similar data based on the entire nonmetropolitan population of Nebraska (using the latest available data from the 2013-2017 American Community Survey). As can be seen from the table, there are some marked differences between some of the demographic variables in our sample compared to the Census data. Thus, we suggest the reader use caution in generalizing our data to all rural Nebraska. However, given the random sampling frame used for this survey, the acceptable percentage of responses, and the large number of respondents, we feel the data provide useful insights into opinions of rural Nebraskans on the various issues presented in this report. The margin of error for this study is plus or minus two percent.

Since younger residents have typically been under-represented by survey respondents and older residents have been over-represented, weights were used to adjust the sample to match the age distribution in the

[^1]nonmetropolitan counties in Nebraska (using U.S. Census figures from 2010). The average age of respondents is 50 years. Seventy percent are married (Appendix Table 1) and 69 percent live within the city limits of a town or village. On average, respondents have lived in Nebraska 43 years and have lived in their current community 27 years. Fifty-six percent are living in or near towns or villages with populations less than 5,000. Ninety-eight percent have attained at least a high school diploma.

Twenty-two percent of the respondents report their 2018 approximate household income from all sources, before taxes, as below $\$ 40,000$. Sixty percent report incomes over $\$ 60,000$.

Seventy-seven percent were employed in 2018 on a full-time, part-time, or seasonal basis. Eighteen percent are retired. Thirty-six percent of those employed reported working in a management, professional, or education occupation. Sixteen percent indicated they were employed in agriculture.

## Awareness of Recent Immigrants

Respondents were asked if they were aware of recent immigrants in their community (persons who have moved to their community within the past five years) from various regions.

Most rural Nebraskans are aware of recent immigrants in their community. Almost six in ten rural Nebraskans ( $57 \%$ ) are aware of recent immigrants from Mexico in their community (Figure 1). Just over one-quarter (27\%) are aware of recent immigrants from Central America. Fewer rural Nebraskans are aware of recent immigrants in their community from South America, Asia, Europe or Africa. However, over 40 percent of respondents said they don't know if there are recent immigrants in their

Figure 1. Awareness of Recent Immigrants in

community from the following regions: Central America, South America, Asia, Europe and Africa.

The awareness of recent immigrants did vary by community size, region and various individual attributes (Appendix Table 2). Persons living in or near larger communities are more likely than persons living in or near smaller communities to say they are aware of recent immigrants in their community from each of the regions listed. As an example, 71 percent of persons living in or near the largest communities say they are aware of recent immigrants from Mexico in their community. In comparison, 41 percent of persons living in or near the smallest communities say they are aware of recent Mexican immigrants in their community.

Regional differences also occur. Residents of the Northeast region are more likely than residents of other regions of the state to be aware of recent Mexican immigrants in their community. Over six in ten residents of the Northeast region (63\%) are aware of recent immigrants from Mexico, compared to 47 percent of Panhandle residents. Residents of
both the South Central and Northeast regions are the regional groups most likely to be aware of recent immigrants from both Central America and South America in their community. Residents of both the Panhandle and South Central regions are the groups most likely to be aware of recent immigrants from Asia in their community. Residents of the South Central region are more likely than residents of other regions of the state to be aware of recent immigrants from Africa in their community. Just over one-third of residents of the South Central region (35\%) are aware of recent immigrants from Africa in their community, compared to approximately 17 percent of the residents of the other regions of the state.

Other demographic groups most likely to be aware of recent immigrants from all of the listed regions in their community include middle aged persons and males. When comparing responses by occupation, persons with food service or personal care occupations are the group most likely to be aware of recent immigrants in their community from each of the listed regions, with the exception of Africa
(there were no statistically significant differences by occupation in that case).

## Perceptions of Immigrants

Next, respondents were given a list of statements about immigrants and were asked to indicate their level of agreement or disagreement with each.

Rural Nebraskans have mixed opinions about the impact of immigration on rural Nebraska. Just under four in ten (38\%) agree that immigrants strengthen rural Nebraska, while three in ten (30\%) disagree (Table 1). And, onethird ( $33 \%$ ) agree that on balance immigration has been good for rural Nebraska, while 27 percent disagree. At least one-third of rural Nebraskans neither agreed nor disagreed with both statements.

Rural Nebraskans are concerned about language issues with immigrants. Most rural Nebraskans (84\%) agree with the statement that immigrants should learn to speak English within a reasonable amount of time. In

Table 1. Opinions about Immigrants

|  | Strongly <br> Disagree | Disagree | Neither | Agree | Strongly <br> Agree |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Immigrants strengthen rural Nebraska. <br> Undocumented immigrants (sometimes <br> referred to as illegal immigrants or aliens) <br> drive down wages in rural Nebraska. <br> On balance, immigration has been good <br> for rural Nebraska. <br> Immigrants should learn to speak English <br> within a reasonable amount of time. <br> Rural Nebraska communities do a lot to <br> include immigrants into the community. <br> Rural Nebraska communities should <br> communicate important information in <br> other languages as well as English. A | $20 \%$ | $33 \%$ | $27 \%$ | $11 \%$ |  |

addition, one-half of rural Nebraskans disagree that communities should communicate important information in other languages as well as English.

Many rural Nebraskans are concerned about the effect illegal immigration may have on wages. Over four in ten (44\%) agree that undocumented immigrants drive down wages in rural Nebraska. Just under one-quarter (23\%) disagree with the statement and one-third neither agree nor disagree.

Opinions are mixed on the reception immigrants receive from communities. Approximately one-third (32\%) agree that rural Nebraska communities do a lot to include immigrants into the community while 21 percent disagree. Almost one-half (47\%) neither agree nor disagree with that statement.

Opinions about immigrants are examined by community size, region and various individual attributes (Appendix Table 3). Persons living in or near larger communities are more likely than persons living in or near smaller communities to agree that immigrants strengthen rural Nebraska. Almost one-half (48\%) of persons living in or near the largest communities agree with that statement, compared to approximately 28 percent of persons living in or near communities with populations under 1,000. Persons living in or near the smallest communities are more likely than persons living in or near larger communities to neither agree nor disagree with the statement.

Persons living in both the South Central and Northeast regions are more likely than persons living in other regions of the state to agree that immigrants strengthen rural Nebraska. At least four in ten residents living in those two regions agree with the statement, compared to
approximately 32 percent of the residents living in the other three regions of the state.

Younger persons are more likely than older persons to agree that immigrants strengthen rural Nebraska. Just over one-half (53\%) of persons age 19 to 29 agree with the statement, compared to 31 percent of persons age 65 and older (Figure 2).

Other groups most likely to agree that immigrants strengthen rural Nebraska include: persons with higher household incomes, persons with higher levels of education and persons with management, professional or education occupations.

Persons with lower education levels are more likely than persons with more education to agree that undocumented immigrants drive down wages in rural Nebraska. Approximately one-half (50\%) of persons with less than a fouryear college degree agree with that statement, compared to 36 percent of persons with at least a bachelor's degree.

Figure 2. Belief that Immigrants Strengthen Rural Nebraska by Age

The other groups most likely to agree that undocumented immigrants drive down wages in rural Nebraska include: persons with lower household incomes, persons over the age of 30 , males, and persons with construction, installation or maintenance occupations.

Persons living in or near the largest communities are more likely than persons living in or near smaller communities to agree that on balance, immigration has been good for rural Nebraska. Just over four in ten persons living in or near the largest communities (42\%) agree with that statement, compared to 25 percent of persons living in or near communities with populations ranging from 500 to 999 .

Other groups most likely to agree that on balance immigration has been good for rural Nebraska include: residents of the South Central region, residents of the Northeast region, persons with higher household incomes, younger persons, persons with higher education levels and persons with management, professional or education occupations.

The groups most likely to agree that immigrants should learn to speak English within a reasonable amount of time include: residents of the North Central region, persons age 50 and older, and persons with less than a four year college degree.

Persons living in or near the largest communities are more likely than persons living in or near smaller communities to agree that rural Nebraska communities do a lot to include immigrants into the community. Almost four in ten persons living in or near the largest communities ( $38 \%$ ) agree with that statement, compared to 26 percent of persons living in or near communities with populations ranging from 500 to 999.

Other groups most likely to agree that rural Nebraska communities do a lot to include immigrants into the community include: residents of the South Central region, residents of the Northeast region, persons over the age of 50 , and persons with occupations in agriculture.

Persons living in or near the largest communities are more likely than persons living in or near the smallest communities to agree that rural Nebraska communities should communicate important information in other languages as well as English. Approximately one-third of persons living in or near communities with populations of 5,000 or more agree with that statement, compared to 19 percent of persons living in or near the smallest communities (Figure 3).

Other groups most likely to agree that rural Nebraska communities should communicate important information in other languages as well as English include: the youngest persons,

Figure 3. Belief that Rural Nebraska Communities Should Communicate Important Information in Other Languages by Community Size

females, persons with the highest education levels, persons with healthcare support or public safety occupations, persons with food service or personal care occupations and persons with management, professional or education occupations. When comparing responses by region, residents of the North Central region are the group least likely to agree with this statement.

## Perceptions of Immigration Policies

Finally, respondents were given a series of statements about immigration policies and were asked the extent to which they agreed or disagreed with each.

Most rural Nebraskans agree with policies that try to prevent illegal immigration. Almost threequarters ( $74 \%$ ) of rural Nebraskans agree that government should tighten the borders to prevent illegal immigration (Table 2). Threequarters (75\%) agree that businesses that employ undocumented workers should be penalized. Almost two-thirds (65\%) agree that undocumented immigrants should be deported. And, a similar percentage (64\%) disagree that the government is too aggressive in deporting those who are in this country illegally.

However, many rural Nebraskans also support a pathway to citizenship for undocumented workers. Over six in ten (62\%) agree that an undocumented immigrant who has been working and paying taxes for five years or more should be allowed to apply for citizenship. Just under six in ten (57\%) agree that there should be a way for undocumented immigrants who meet certain requirements to stay in the country legally. And, seven in ten (70\%) agree that immigrants who were brought to the U.S.
illegally as children should be allowed the chance to become U.S. citizens if they meet certain requirements over a period of time.

Opinions are mixed on if the existing guestworker program should be expanded to better allow immigrants to work in agriculture without becoming U.S. citizens. Just under four in ten (36\%) agree with that statement and the same percentage disagree.

Some of these statements were also asked in the 2006 Nebraska Rural Poll. Many opinions about immigration policies remain about the same as they were in 2006. However, fewer rural Nebraskans today support the government tightening the borders to prevent illegal immigration than they did in 2006. In 2006, 83 percent of rural Nebraskans agreed that the government should tighten the borders to prevent illegal immigration (Figure 4). In 2019, this percentage fell to 74 percent. And, the proportion who agree that an undocumented immigrant who has been working and paying taxes for five years or more should be allowed to apply for citizenship increased slightly from 58 percent in 2006 to 62 percent this year.

The opinions about immigration policies are examined by community size, region and individual attributes (Appendix Table 4). Older persons are more likely than younger persons to agree that businesses that employ undocumented workers should be penalized. At least three-quarters of persons age 30 and older agree with this statement, compared to 56 percent of persons age 19 to 29 .

Other groups most likely to agree with this statement include: males; persons with lower education levels; persons with production, transportation or warehousing occupations; and

Table 2. Opinions about Immigration Policies

|  | Strongly Disagree | Disagree | Neither | Agree | Strongly Agree |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Businesses that employ undocumented workers should be penalized. | 4\% | 7\% | 15\% | 36\% | 39\% |
| Undocumented immigrants should be deported. | 6 | 11 | 18 | 29 | 36 |
| The government is too aggressive in deporting those who are in this country illegally. | 37 | 27 | 18 | 11 | 7 |
| An undocumented immigrant who has been working and paying taxes for five years or more should be allowed to apply for citizenship. | 10 | 13 | 16 | 44 | 18 |
| There should be a way for undocumented immigrants who meet certain requirements to stay in the country legally. | 12 | 16 | 15 | 40 | 17 |
| Immigrants who were brought to the U.S. illegally as children should be allowed the chance to become U.S. citizens if they meet certain requirements over a period of time | 7 | 9 | 13 | 49 | 21 |
| The government should tighten the borders to prevent illegal immigration. | 6 | 5 | 14 | 26 | 48 |
| The existing guest-worker program should be expanded to better allow immigrants to work in agriculture without becoming U.S. citizens. | 15 | 21 | 27 | 24 | 12 |

persons with construction, installation or maintenance occupations. When comparing responses by region, residents of the Panhandle are less likely than the residents of other regions to agree that businesses that employ undocumented workers should be penalized.

The groups most likely to agree that undocumented immigrants should be deported include: older persons, males, persons without a four year college degree, and persons with construction, installation or maintenance occupations.

Residents of the Southeast region, residents of the Panhandle, females, and persons with management, professional or education occupations are the groups most likely to agree that the government is too aggressive in deporting those who are in this country illegally.

Residents of the Panhandle are more likely than persons living in other regions of the state to agree that an undocumented immigrant who has been working and paying taxes for five years or more should be allowed to apply for citizenship. Almost three-quarters (73\%) of

Figure 4. Opinions about Immigration Policies, 2006 and 2019

Panhandle residents agree with this statement, compared to 52 percent of residents of the North Central region.

Other groups most likely to agree with that statement include: younger persons, females, and persons with healthcare support or public safety occupations.

Persons with higher income levels, younger persons, females, persons with higher education levels and persons with healthcare support or public safety occupations are the groups most likely to agree that there should be a way for undocumented immigrants who meet certain requirements to stay in the country legally.

Younger persons are more likely than older persons to agree that immigrants who were brought to the U.S. illegally as children should be allowed the chance to become U.S. citizens if they meet certain requirements over a period of time. Over eight in ten (83\%) of persons age 19 to 29 agree with that statement, compared to 63 percent of persons age 50 to 64 .

Other groups most likely to agree with that statement include: females, persons with higher education levels and persons with healthcare support or public safety occupations.

Older persons are more likely than younger persons to agree that the government should tighten the borders to prevent illegal immigration. Almost eight in ten (79\%) of persons age 50 and older agree with that statement, compared to approximately twothirds of persons under the age of 40 (Figure 5).

Males and persons without a four year college degree are the other groups most likely to agree that the government should tighten the borders to prevent illegal immigration.

The groups most likely to agree that the existing guest-worker program should be expanded to better allow immigrants to work in agriculture without becoming U.S. citizens include: persons with higher household incomes, persons age 65 and older, males, persons with the highest education levels and persons with management, professional or education occupations.

Figure 5. Belief that the Government Should Tighten the Borders to Prevent Illegal
Immigration by Age

## Conclusion

Most rural Nebraskans are aware of recent immigrants in their community. Almost six in ten rural Nebraskans are aware of recent immigrants from Mexico in their community. Just over one-quarter are aware of recent immigrants from Central America. Fewer rural Nebraskans are aware of recent immigrants in their community from South America, Asia, Europe or Africa. However, many respondents said they don't know if there are recent immigrants in their community from the following regions: Central America, South America, Asia, Europe and Africa.

Persons living in or near larger communities are more likely than persons living in or near smaller communities to say they are aware of recent immigrants in their community from each of the regions listed.

Rural Nebraskans have mixed opinions about the impact of immigration on rural Nebraska.

Just under four in ten agree that immigrants strengthen rural Nebraska, while three in ten disagree. And, one-third agree that on balance immigration has been good for rural Nebraska, while just over one-quarter percent disagree.

However, the residents that were more likely to be aware of immigrants in their community are more likely to see the benefits of immigration. For example, persons living in or near larger communities are more likely than persons living in or near smaller communities to agree that immigrants strengthen rural Nebraska. Younger persons and persons with higher education levels are also more likely to see the benefits of immigration.

Rural Nebraskans are concerned about language issues with immigrants. Most rural Nebraskans agree with the statement that immigrants should learn to speak English within a reasonable amount of time. In addition, onehalf of rural Nebraskans disagree that communities should communicate important information in other languages as well as English.

However, persons living in or near the largest communities (who are again more likely to be aware of immigrants in their community) are more likely than persons living in or near the smallest communities to agree that rural Nebraska communities should communicate important information in other languages as well as English.

Many rural Nebraskans are concerned about the effect illegal immigration may have on wages. Over four in ten agree that undocumented immigrants drive down wages in rural Nebraska. Persons with construction, installation or maintenance occupations are more likely than persons with different occupations to agree with this statement.

Opinions are mixed on the reception immigrants receive from communities. Approximately one-third agree that rural Nebraska communities do a lot to include immigrants into the community while just over two in ten disagree. Almost one-half neither agree nor disagree with that statement.

Most rural Nebraskans agree with policies that try to prevent illegal immigration. Almost threequarters of rural Nebraskans agree that government should tighten the borders to prevent illegal immigration. Three-quarters agree that businesses that employ undocumented workers should be penalized. Almost two-thirds agree that undocumented immigrants should be deported. And, a similar percentage disagree that the government is too aggressive in deporting those who are in this country illegally.

However, many rural Nebraskans also support a pathway to citizenship for undocumented workers. Over six in ten agree that an undocumented immigrant who has been working and paying taxes for five years or more should be allowed to apply for citizenship. Just under six in ten agree that there should be a way for undocumented immigrants who meet certain requirements to stay in the country legally. And, seven in ten agree that immigrants who were brought to the U.S. illegally as children should be allowed the chance to become U.S. citizens if they meet certain requirements over a period of time.

Opinions are mixed on if the existing guestworker program should be expanded to better allow immigrants to work in agriculture without becoming U.S. citizens. Just under four in ten agree with that statement and the same percentage disagree.

Many opinions about immigration policies remain about the same as they were in 2006. However, fewer rural Nebraskans today support the government tightening the borders to prevent illegal immigration than they did in 2006. And, the proportion who agree that an undocumented immigrant who has been working and paying taxes for five years or more should be allowed to apply for citizenship increased slightly from 2006 to this year.

[^11]
[^0]:    1 In the spring of 2013, the Grand Island area (Hall, Hamilton, Howard and Merrick Counties) was designated a metropolitan area. To facilitate comparisons from previous years, these four counties are still included in our sample. In addition, the Sioux City area metropolitan counties of Dixon and Dakota were added in 2014 because of a joint

[^1]:    Metro Poll being conducted by the University of Nebraska at Omaha to ensure all counties in the state were sampled. Although classified as metro, Dixon County is rural in nature. Dakota County is similar in many respects to other "micropolitan" counties the Rural Poll surveys.

[^2]:    1 Data from the Rural Polls have been weighted by age.
    2 2013-2017 American Community Survey universe is non-metro population 20 years of age and over.
    3 2013-2017 American Community Survey universe is non-metro population 20 years of age and over.
    4 2013-2017 American Community Survey universe is non-metro population 18 years of age and over.
    5 2013-2017 American Community Survey universe is all non-metro households.
    6 Income categories for the Rural Polls were expanded in 2019. \$75,000 or more was the largest category before then.
    7 2011-2015 American Community Survey universe is non-metro population 20 years of age and over.
    *Comparison numbers are estimates taken from the American Community Survey five-year sample and may reflect significant margins of error for areas with relatively small populations.
