Course Policies	

"Drug Literature Evaluation" is a course designed to allow the student to think creatively and to accept responsibility for his/her own learning. Students are expected to complete all required readings and assignments *before* the lecture is delivered. In addition, students are expected to *actively participate* in group discussions and to lead discussions when appropriate. Participation in assigned discussions will be evaluated based on the following:

The student provides insightful comments. The student demonstrates knowledge acquired through assignments, etc. The student builds on thought processes from previous discussions and does not simply agree or disagree with previous statements. The student leads group discussions when appropriate.

Not everything that is important will necessarily be covered in class; therefore, material from the required readings may appear on quizzes even though it was not explicitly covered in class. The instructors in this course welcome and encourage class participation. Please feel free to ask pertinent questions in class. Also, be prepared to answer questions or otherwise comment in class, and to lead group discussions when called upon by the instructor. Short in-class assignments may occasionally be utilized to further develop your thinking skills and to elicit your feedback about the class.

Assignments are due on the date designated, at the beginning of class. If any assignment is turned in after the due date, the student may be penalized 10% of the point value for the assignment for each day that the assignment is late. Quizzes will typically be open book and will be problem-oriented.

If extenuating circumstances arise, especially if it means you will not be in class for a quiz or discussion or are unable to turn in an assignment on time, contact the instructor **BEFORE** the due date. While each case will be handled on an individual basis, in general, if you do not take responsibility for the situation, you will not be allowed to make up the assignment or quiz.

If any assignment contains information that is false or unsubstantiated, you *WILL* fail the assignment, and you may fail the course. As a health care professional, if you disseminate information that is wrong you could gravely impact the care that a patient receives.

Plagiarism is a form of academic dishonesty. This is using anyone else's work as your own. This includes another student's, another author's, etc. In this class, you **WILL** fail the assignment if you plagiarize anyone else's work.

What is plagiarism? While everyone has their own concept of this, the guide that will be used for this class is copying more than six consecutive words verbatim or more than two sentences in an assignment that reflect the original author's phrasing, sentence structure, and meaning rather than the student's own thoughts.

#### Grading Policies a bus deviaged and the mediate set of the second second second second second second second second second second

Grades for the course are based on the following percentage scale:

	a subserved verse control data a subserved a	n neurona neurona ante en estas destas de contro de contro de seres de la desta de la seres de seres de
90-100%	A. MARTINE	come an essential here and to bee an end to here a series
80-89%	В	· · · · · · · · · · · · · · · · · · ·
70-79%	С	
65-69%	D	
< 65 %	<b>A</b>	and an appendix of the another and the
Service in the point	APPA (KREARENDER) -	The maken builds or checking processes from processes

Your grade will be based on 2 major projects, 4 miscellaneous assignments, 6 quizzes, and participation in group discussions and presentations. The relative percentage weight is as follows:

Drug Monograph	1 <b>30%</b> (Costable in a contraction of participation of the
DI Consult	30% and the second s
Quizzes (6)	5% - 30 - 10 - 10 - 10 - 20
Misc. Assignments (4)	10% strate a consequent of the first strategies of
Journal Club Discussions (8)	20%
P&T Presentation	5% and the photon are colored parts in 2020 b.

#### **Performance Objectives:**

At the conclusion of this course, the student will be able to:

- 1. Compare and contrast online resources to printed resources.
- 2. Differentiate between primary, secondary and tertiary literature.
- 3. Given a drug information request:
  - a. Classify the request for the purposes of obtaining a better history and identifying useful references.
  - b. Outline a search strategy.
  - c. Using appropriate references, collect the necessary information.
  - d. Evaluate the information obtained.
  - e. Formulate and communicate a response, both verbally and in writing.
- 4. Given an article from the primary literature:
  - a. Describe the type of study design used.
  - b. Describe the advantages and disadvantages of this type of study.
  - c. Identify flaws in the study design.
  - d. Define the statistical terms used in the study.
  - e. Assess if the conclusions of the study are appropriate based on the information presented in the study.

enterned manager and a low yet

- 5. List the five parts of a research paper. Describe the information included in each part.
- 6. Describe the purpose and differentiate between Phase I, II, III, and IV studies.
- 7. Research and prepare a formal drug monograph.

#### Target Audience

This course is intended for students enrolled in the Pharm.D. Program.

#### **Text and Materials**

Required readings will be posted in the Schedule and will be distributed in class, available at Mansfield Library, or posted on the web or server. Some additional suggested readings include:

Interpreting the Medical Literature, 1993 Stephen H. Gehlback, DC Heath and Co. Studying a Study and Testing a Test, 1989 RK Riegelman, RP Hirsch, Little Brown & Co. Guide to Clinical Studies and Developing Protocols, 1984 Bert Spilker, Raven Press. Clinical Skills Program: Drug Information, 1995 American Society of Health-System Pharmacists.
