Programme : Master of Science (MD780)
Faculty : Medicine
Thesis Title : Coronary Risk Factor Profile, Risk Score and Survival
Analysis Over a 17 Year Period in a Rural Community
Signature of Student : 
Date : November 2014

ABSTRACT

Cardiovascular disease continues to contribute to the major cause of death and disability worldwide in both developed and developing countries. Reliable data on the changes of cardiovascular disease (CVD) risk factor and mortality over a substantial period of time in a rural Malaysian community is limited. The objective of this study was to assess the progression of cardiovascular disease risk factor over a period of 17 years in a rural community. A follow-up study of the 1993 RAUB HEART STUDY was done in 2010. Demographic data and cardiovascular risk factors were measured and verbal autopsy questionnaires were given to the family members of the 45 deceased subjects. The changes of risk factor and survival analysis of the deceased were analysed. Significant increase in the mean systolic and diastolic blood pressure (SBP and DBP), body mass index (BMI), total cholesterol (TC), high density lipoprotein cholesterol (HDL-c), low density lipoprotein (LDL-c) were observed over the 17 year period. The prevalence of hypertension, diabetes mellitus, hypercholesterolemia and obesity also increased from 21.2%, 6.0%, 22.2% and 16.5% to 60.0%, 19.9%, 51.5% and 24.0% respectively. Significant reduction in smoking was seen among women but not men. The survival analysis showed significant difference for hypertension, smoking and FRS in all cause mortality. The cardiovascular risk factors worsen over the 17 year period. This increases the risk of having CVD disease among the follow-up subjects. Hypertension and smoking were a significant risk factor for all-cause mortality. Further understanding of the CVD risk factor in this longitudinal study is essential in determining the effect of a substantial period of time have towards an individual's cardiovascular disease risk.

TABLE OF CONTENTS

	Page
CONFIRMATION BY PANEL OF EXAMINERS	ii
AUTHOR'S DECLARATION	iii
ABSTRACT	iv
ACKNOWLEDGEMENT	v
TABLE OF CONTENTS	vi
LIST OF TABLES	x
LIST OF FIGURES	xiii
LIST OF ABBREVIATIONS	xv
CHAPTER ONE: INTRODUCTION	1
1.1 Background	1
1.2 Hypothesis	2
1.3 Significance of Study	2
1.4 Objectives of Study	2
CHAPTER TWO: LITERATURE REVIEW	3
2.1 Coronary Heart Disease and Its Risk	3
2.2 Cardiovascular Risk Factor in Malaysia	4
2.2.1 Blood Pressure	5
2.2.1.1 Hypertension	5
2.2.1.2 Prehypertension	6
2.2.2 Cholesterol	15
2.2.2.1 Hypercholesterolemia	16
2.2.2.2 Low Density Lipoprotein	17
2.2.2.3 High Density Lipoprotein	17
2.2.2.4 Very Low Density Lipoprotein	18
2.2.2.5 Triglyceride	18
2.2.2.6 Non-HDL	18
2.2.2.7 Dyslipidaemia	19

2.2.3	Obesity	22
2.2.3.1	Body Mass Index	23
2.2.3.1.1	Classification of BMI and Its Ranges	25
2.2.3.2	Abdominal Obesity and Waist Hip Ratio	27
2.2.4	Diabetes Mellitus	41
2.2.4.1	Hyperglycaemia and Its Criteria	41
2.2.4.2	Prevalence of Diabetes	43
2.2.5	Smoking	46
2.3	Framingham Heart Study and Risk Score	48
2.3.1	Framingham Risk Score	49
2.4	Mortality and CVD Mortality	52
2.5	Rural Community	53
CHAPTER THREE: METHODOLOGY		54
3.1	The RAUB HEART STUDY: A Brief Introduction	54
3.2	Raub	55
3.3	Findings of the 1993 RAUB HEART STUDY	56
3.4	Subject's Information and Status Update	59
3.5	RAUB HEART STUDY 2010 Sample Size Calculation	59
3.6	Follow-up Medical Check-Up Program	59
3.6.1	House-to-House Follow-Up	60
3.6.2	Case Report File and Questionnaires	61
3.6.3	Blood Pressure Measurement	61
3.6.4	Anthropometric Measurement	61
3.6.5	Individual Specimen Kits and Blood Collection Preparation	62
3.6.6	Blood Collection and Blood Sample Analysis	62
3.6.7	Mortality and Survival Analysis	65
3.7	Data Analysis	66
3.8	Flow-Chart on Data Collection and Analysis	67
3.9	Ethics	68
