"Using Scorecards to Monitor Program Performance"

Donna Stevens, Program Director, OACIS Services; Carol McFadden, RN, BSN, CCRN, QA Specialist Lehigh Valley Health Network, Allentown, Pennsylvania

A cross-section of quality indicators, reflecting our institutional quality standards and the Domains of Quality Palliative Care, were selected to measure the impact of our work.

To communicate our findings to both staff and leadership, a scorecard was developed for our inpatient and outpatient palliative medicine programs.

- Monitoring and communicating the complex array of data required to assure clinical, operational, financial and quality performance is crucial to the success of a
 palliative medicine program. Our team developed a one-page scorecard for both the inpatient and outpatient services to assemble and display relevant outcomes in a
 succinct and timely manner.
- The measures were selected to help identify opportunities in both process and outcomes for the palliative care program and support the five pillars of our institutional quality improvement program: finance, growth, service, quality and people.
- This report is used as an internal barometer and distributed to key network leaders to demonstrate ongoing benefits and needs of the palliative medicine services.
