Objectives:

The aim of this study was to identify quality indicators following robotic surgery in patients with endometrial cancer.

Methods:

Patients diagnosed with endometrial cancer scheduled for a robotic-assisted hysterectomy from 6/2008-6/2010 were compared to endometrial cancer patients who had laparoscopic-assisted hysterectomy from 9/2005-6/2010. Demographic data included age, BMI, comorbidities and stage. Outcome measures reviewed were lymph node retrieval, LOS, EBL, operative times, transfusion rates and complications. SPSS was used to perform Student's t-tests and Pearson's chi square tests.

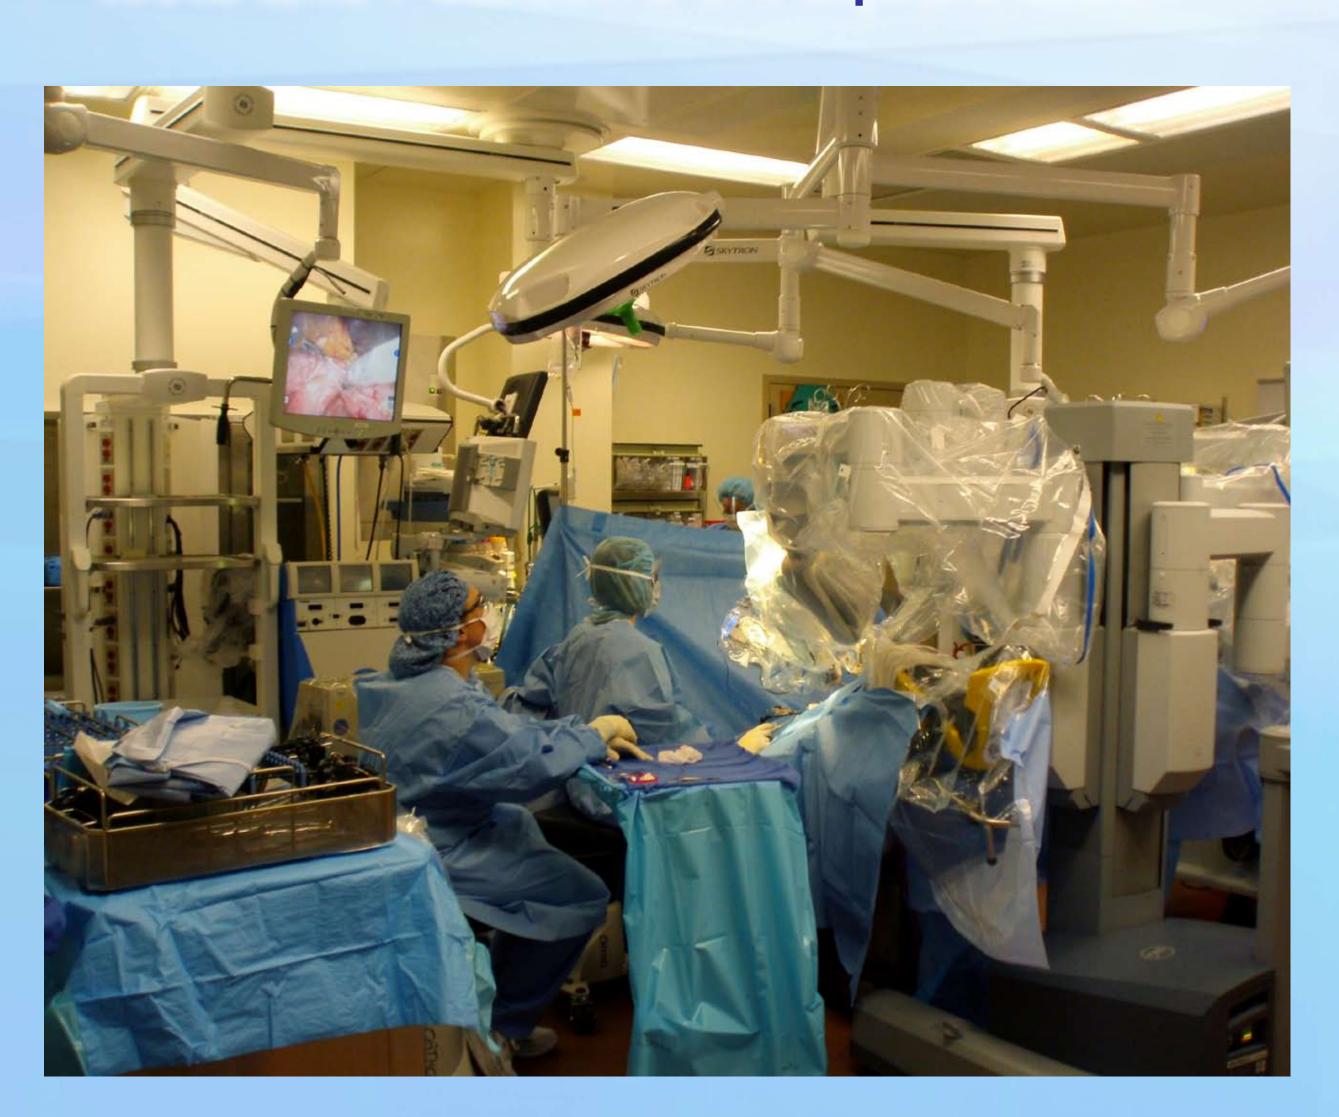

Table 1. Patient Demographics

Secondary Outcomes Age	Robotic (n=106)	Laparoscopic		
Age		(n=122)	P value	
Mean	61.7	63.6	0.216	
SD	11.913	11.404		
BMI (kg/m²)				
Mean	35.39	33.59	0.152	
SD	9.45	8.27		
Clinical Stage				
IA	38	31		
IB	36	61		
IC	11	17		
IIA	4	2		
IIB	7	4		
IIIA/IIIB/IIIC	10	6		
IVA/IVB	0	1		
Total Nodes				
n	33	52		
Mean	18.8	16.54	0.256	
SD	16.68	7.29		
Total Pelvic Nodes				
n	46	59		
Mean	14	12.88	0.439	
SD	7.31	7.32		
Total Periaortic Nodes				
n	31	50		
Mean	5.13	5.52	0.680	
SD	4.23	3.94		
Comorbidities				
Hypertension	33	61		
Diabetes	12	20		
Asthma	1	3		

Table 2. Operative Outcomes

	Robotic (n=106)	Robotic Laparoscopic (n=106) (n=122)				
EBL						
Mean	129.9	217.7	0.002			
SD	198.2	226.1				
LOS (min)						
Mean	2360.88	3233.96	0.152			
SD	1364.81 1					
LOS (d)						
Mean	1.31	1.98	0.00003			
SD	0.94	1.41				
Total Incision Time (min)						
Mean	180.59	194	0.127			
SD	69.44	61.45				
Total OR Room Rime (min)						
Mean	150.13	261.75	0.207

Number of Transfusions	6					
Transfusion Rate	0.94%	8.20%				

Table 3. Complications

COMPLICATIONS	TRH (n=106)		TLH (n=122)	
Major Intraoperative Complications		Incidence Rate		Incidence Rat
Caval injury	1	0.94%		
Bowel injury	1	0.94%		
Bladder injury	1	0.94%		
Uterine perforation	1	0.94%	1	0.82%
Major Intraoperative Complication Rate	3.77%		1.64%	
Conversions				
Laparoscopic to laparotomy			8	
Pre-docking conversion to laparotomy	2			
Post-docking conversion	3			
Total Concewaion Rate	4.72%		4.72%	
Readmission <30 days	5	4.72%	11	9.02%
Major Postoperative Complication	ns			
Death < 30 days of surgery	1	0.94%		
Atrial fibrillation			1	0.82%
Stroke				
MI			2	1.64%
Port site hernia			3	2.46%
Umbilical hernia				
Readmission for ileus			2	1.64%
Small bowel resection due to port site hernia			2	1.64%
VTE - 1 DVT, 2 DVT with PE	3	2.83%		
Respiratory failure/reintubation	1	0.94%		
Pulmonary edema				
Cholecystitis				
Femoral nerve palsy				
Lymph edema				
Wound cellulitis	1	0.94%	1	0.82%
UTI	1	0.94%	4	3.28%
Wound infection	2	1.89%	3	2.46%
Pelvic hematoma			1	0.82%
Vaginal cuff hematoma				
Vaginal cuff dehiscence	1	0.94%		
Vaginal seroma				0.0007
Vaginal cuff cellulitis			1	0.82%
Vaginal fictules			1	0.82%
Vaginal fistula			1	0.82%
Vesicovaginal fistula Pelvic abscess	1	0.94%		0.82%
Sepsis	1	0.94%		
Pneumonia	1	0.94%		
. Hodifionia	, , , , , , , , , , , , , , , , , , ,	0.54 /0		
Total Major Complications: Intraoperative	4		2	
Total Major Complications: Postoperative	13		26	
Total Number of Complications	17		28	
Total Patient Complication Pete	10.383%		19.67%	
Total Patient Complication Rate	10.363%		19.07%	

Results:

228 patients (106 robotic, 122 laparoscopic) were analyzed. There were no significant difference between the robotic and laparoscopic cohorts with respect to age, BMI, stage, comorbidities or total lymph node counts (16 vs 18). Five robotic cases (4.7%) and 8 laparoscopic cases (6.6%) had to be converted to laparotomies (P=.55). One robotic case (.94%) and 10 laparoscopic cases (8.20%) received transfusions (P=.01). Median operative time was 186 min for robotics and 183 min for laparoscopies (P=.13). Median EBL was 50mL for the robotic group and 150mL for the laparoscopic group (P<.01). Median LOS was for robotics and laparoscopic cohorts were 1 and 2 days, respectively (P<.01). Eleven robotic patients experienced a perioperative complication (10.4%) compared to 24 laparoscopic patients (19.7%) (P=.05).

Conclusion:

Patients who have robotic surgery experience less blood loss, shorter length of stays, fewer transfusions and fewer complications compared to laparoscopic surgery. Robotic surgery improves surgical outcome related to quality.
