**Abstract.** Along with theoretical review of partituras and encryption systems, we have tried to conduct encryption of sheets by encoding all of its elements such as: encoding musical notes, encoding values of notes and intermissions, encoding accords, encoding tonalities and encoding rhythm whereby the original musical piece is transformed into an irregular and meaningless sheet. Information technology today has allowed for easier copying of authorial pieces; therefore, it is necessary to know encryption which allows protection of pieces from any misuse. Cryptology including knowledge of congruence deals with resolution of these insecurities. The significance of this paper lies in intertwining knowledge from music, math and computer sciences thus rendering our paper into an inter-disciplinary paper and we believe this will increase curiosity and the interest as well. In order to make our work more concrete, we have included encoding and decoding of a well-known melody from Shkodra "A'SAMAN TRËNDAFILË ÇELËS", whereby as encryption key we used a two-tact fragment from the song "O VENDI IM"

**Keywords:** pentagram, cryptosystem, encryption, decryption, music note, congruence.

### 1 Knowledge on congruence and cryptosystems

**Definition 1:** Let's have:  $m \in \mathbb{N}, \forall a, b \in \mathbb{Z}$ ; Whereby  $a$  is congruent with  $b$  based on module  $m$  then and only if  $m|(a - b)$ . We note:  $a \equiv b \pmod{m}$ .

or

$$a \equiv b \pmod{m} \Leftrightarrow \exists k \in \mathbb{Z} \mid a - b = km \quad (1)$$

The congruency relation is the relation of equivalence; therefore, the meaning of congruence is closely related with the meaning of residual classes.

**Definition 2:** Let's have:  $m \in \mathbb{N}$ . Classes of equivalence defined with the relation " $\equiv$ " based on module  $m$  (or as they are called in the theory of residual class numbers based on module  $m$ ), they represent the union of all the numbers, which when divided with  $m$  give the same residual value. Symbolically, residual classes based on module  $m$  are noted as in following:

$$K_m(a) = \{x \in \mathbb{Z} \mid x \equiv a \pmod{m}\} \subset \mathbb{Z} \quad (2)$$

Every residual class based on module  $m$  is not empty since always  $\exists a \in K_m(a)$  whereby

$$a \equiv a \pmod{m}.$$

**Note 1:** In our paper we use smallest non-negative representatives of the equivalence class.

The following serves as reminder of some congruency features:

In order to encrypt notes into three octaves, we need another musical fragment, e.g. Elise

**Note 2.** Instead of this fragment, we can use any other musical fragment.

Encryption is as in following:  $N_p + N_c = N_k \pmod{37}$  (3)

$N_p$  means notes of the sheet we wish to encrypt;  $N_c$  means the notes of the key sheet (in our case, Elise [8]), while  $N_k$  means encrypted notes e.g. we encrypt the second octave with the help of key Elise

The second octave encrypted with the key Elise

**Note 3.** Decryption is done with

$N_k - N_c = N_p \pmod{37}$  (4)

**2.2 Value of notes and intermissions**

(Apart from encryption of notes, values of notes and intermissions must also be encrypted)

00A Full note = 4	01B Half note = 2	02G Four note = 1
03D Eight note = 1/2	04E Sixteen note = 1/4	05F Full note with dot = 6
06G Half note with dot = 3	07H Four note with dot = 1.5	08I Eight note with dot
09L Full intermission = 4	10K Full intermission with dot = 2	11L Four intermission = 1

7  
 12M Eight intermission=1/2 3N Full intermission with dot=614O Half intermission with dot=2

15P Four intermission with dot = 1,5                      16Q Sixteen intermission with dot = 0,75

**Note 4:** Dots extend the values of notes and intermissions by half their value.  
 Encryption of values is done based on module 17, e.g. one tact from Elise [8]

$$V_p + V_c = V_k \pmod{17} \tag{5}$$

Piano

**Note 5:** Decryption of values will be done with

$$V_k - V_c = V_p \pmod{17} \tag{6}$$

Music partituras sheet, apart from notes, intermissions and their values that create the rhythm, it has the tonality, accords, the tact and a series of other composition elements. The following with introduce musical tonalities in order to encrypt the tonality. Musical tonality is the musical scale wherein the entire musical piece is developed. Tonalities are divided into Dur-Majeure or major or mol-minor or minor (with diezis and bemol) which differ greatly in sounds.

The musical tonalities are the following:

- # C-Dur   G-Dur   D- Dur   A-Dur   E- Dur   H- Dur   Fis-Dur
- a-mol   e-mol   h-mol   fis-mol   cis-mol   gis-mol   dis-mol
- b F-Dur   B-Dur   Es-Dur   As-Dur   Des-Dur   Ges-Dur   Ces-Dur
- d-mol   g-mol   c-mol   f-mol   b-mol   es-mol   as-mol

Encryption of the tonality

$$T_p + T_c = T_k \pmod{28} \tag{7}$$

while decryption with

$$T_k - T_c = T_p \pmod{28} \tag{8}$$

### 2.3 Accords

Main accords in a musical piece are into three grades: first grade: tonics that represents the conclusion of the musical piece; fourth grade: sub-dominant, which represents the development of the musical piece and the fifth grade – dominant, which represents the culmination of the musical piece. We will stop at the main accords which are also divided into mol and dur, major and minor. Musical sheets contain a variety of accords such as quint accord 3/5 with rotations, sextaccord 6/3 and second accord, nonarord 9. Apart from these, it is important to emphasize the musical partituras sheet and intervals. Nevertheless, we will stop only at the main quit-accords.

Encryption of accords follows

$$A_p + A_c = A_k \pmod{21} \quad (9)$$

while decryption is done with

$$A_p - A_c = A_k \pmod{21} \quad (10)$$

**Note 6:** Quint accord is a simultaneous sound of three sounds.

The image shows a musical score for Piano and Pno. (Piano and Pno.) with three staves. The first staff is labeled 'Piano' and contains measures 00 through 08. The second staff is labeled 'Pno.' and contains measures 09 through 17. The third staff is labeled 'Pno.' and contains measures 18 through 20. Each measure contains a chord symbol, such as C, F, G, D, A, E, B, and so on, with various accidentals and stems. The chords are arranged in a sequence that demonstrates the concept of a quint accord.

**Example:**

A'SAMAN TRËNDAFILI ÇELËS  
(Melody from Shkodra [7], [9], [10])

The image shows a musical score for the piece "O vendi im". It consists of four systems of music. The first system is labeled "Piano" and the second and third are labeled "Pno.". Each system contains a treble and bass clef staff with notes and rests. Below the staves are numerical annotations representing encryption. The first system has two rows of numbers: "N28 26 24 23 21" and "v07 03 03 03 02" above the treble staff, and "A13 13 13 13" and "F02 02 02 02" above the bass staff. The second system has two rows: "21 28 28 28" and "02 03 03 02 02" above the treble staff, and "13 13 13 13" and "02 02 02 02" above the bass staff. The third system has two rows: "23 21 21 20 21" and "03 03 03 03 01" above the treble staff, and "08 08 13" and "02 02 01" above the bass staff. The fourth system has two rows: "20 21 25 24 26 24 23" and "03 03 03 03 03 03 03" above the treble staff, and "08 08 08 08" and "02 02 02 02" above the bass staff. There are also some numbers like "07", "02", "01", "03", "02", "01", "02", "01" scattered throughout the systems.

Key – O vendi im ([7], [9], [10])

The image shows a musical score for the piece "O vendi im". It consists of two systems of music. The first system is labeled "Piano" and the second is labeled "Pno.". Each system contains a treble and bass clef staff with notes and rests. Below the staves are numerical annotations representing encryption. The first system has two rows of numbers: "N17 16 14" and "V01 03 03" above the treble staff, and "02 02 02" and "02 02 02" above the bass staff. The second system has two rows: "17 14 17 17 17" and "01 03 02 02 02" above the treble staff, and "02 02 02" and "02 02 02" above the bass staff. There are also some numbers like "19 17 16", "14 14", "05 05", "12 12 12", "13 13 13", "02 02 02", "05 05" scattered throughout the systems.

### Tonality encryption

Since the musical sheet contains the tonality and the key, the encryption is simple. Main sheet is in a-mol (03) while the key is in d-mol (21). Tonality encryption is done with module 28.

$$03+21=24 \pmod{21}$$

The encrypted tonality is f-mol.

### Rhythm

The same method applies with rhythm as well since the entire musical sheet is in one rhythm. Main rhythms are: 2/4 (00), 3/4 (01), 4/4 (02), 5/8 (03), 6/8 (04), 7/8 (05), 9/8 (06), 12/8 (07)

Rhythm "A'saman trendafil çeles" 02

Rhythm “O vendi im” 01

$02 + 01 = 03 \pmod{8}$   
 Encrypted rhythm is  $(03) = 5/8$ .

Decrypted rhythm is  $03-01 = 02 \pmod{8}$ ,  $(02)$  is  $4/4$ .

Decrypted element placing in the partitures and we receive Shkodran melody “A’SAMAN TRËNDAFILË ÇELËS”,

The musical score is for Piano (Pno.) and is in 4/4 time. It consists of four systems of music. Each system includes a treble clef staff with a melody line and a bass clef staff with a harmonic accompaniment. Below each system, there are two rows of numbers representing the decrypted rhythm and element placement. The first system starts with measure 1, the second with measure 5, the third with measure 9, and the fourth with measure 12. The numbers are arranged in pairs corresponding to the notes in the melody.
