## **PERMISSION TO USE**

In presenting this thesis of the requirements for a Master of Science in Information and Communication Technology (MSc. IT) from Universiti Utara Malaysia, I agree that the University library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or in their absence, by the Dean of Graduate School. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Request for permission to copy or make other use of materials in this thesis, in whole or in part, should be addressed to:

Dean of Graduate School  
Universiti Utara Malaysia  
06010 Sintok  
Kedah Darul Aman  
Malaysia

## **ABSTRACT**

The desire to get hold of books via the Internet has affected the professional lives of librarians and book dealers, and has radically changed the face of both personal and institutions collectively. Day-to-day increasing tuitions and the decreasing availability of financial aid, the high cost of textbooks has become a serious concern for most of the students. Price for new college textbooks has risen day in day out. In this research, the issue to be solved is basically how to dispose used textbooks for students who no longer needed them, and where to obtain used textbooks for those who needed them at affordable price and with ease. Thus, the study will be focuses on the design of an application system of promotion used book in the context of UUM.

## ACKNOWLEDGEMENT

Praise and gratitude to Allah, the Almighty, for bestowing me with great strength, patience, and courage in completing this project.

My gratefulness to my supportive and helpful supervisor, Assoc Prof. Dr. Wan Rozaini Sheik Osman for assessing and guiding me in the completion of this research. With all truthfulness, without her, the project would not have been a complete one. She has always been my source of motivation and guidance. I am truly grateful for her continual support and cooperation in assisting me all the way through the semester.

I would like to present my thanks to my father, my mother and all my family who has always been there for me. Finally, I would like to express my appreciations to all my friends, colleagues, FTM staff, and everyone who has helped me in this journey. My thanks goes to Madam Haslina Mohd for her help in the report.

## **CHAPTER 1**

### **INTRODUCTION**

This chapter presents a brief clarification of the research background that mainly entails the selling and buying of second hand books in UUM. The advantages deriving from such transaction are brought to light. Moreover, the problem statement, the objectives, the scope and the significance of the study were established.

#### **1.1 Background**

The desire to get hold of books via the Internet has, after all, profoundly affected the professional lives of librarians and book dealers, and has radically changed the face of both personal and institutions collectively. From the students' standpoint, they are doing more shopping online thus encouraging capital growth and ongoing popularity of online bookseller and book auction sites. Leimstoll et al. (2005) have adopted the Extended Web Assessment Method (EWAM) as an estimation tool specifically created for the assessment of electronic commerce applications. As this said, their study focuses on consumer perspectives and the specific features of the Internet as a medium. Moreover, the EWAM tool is used for comparative analysis amongst

## **6.4 Future work**

In a short, the proposed prototype system is a viable solution to be implemented promotion used book system for developing web-based application. The research has not yet been explored other web-based gadget with HTTP browser, which can be able to make it a comprehensive proposal. Experimentation and evaluation of the prototype using real connection cannot be done due to limited financial budget.

Promotion used book web-based application has the following features that will benefit the users:

1. Provides direct, simple access to the focused valuable content via few keystrokes or text entry only.
2. Information regarding this web-based is trimmed page to page navigation down to a minimum and hyperlink buttons are used to navigate back.
3. Reduces the amount of vertical scrolling by simplifying the text to display.

Finally, web-based promotion used book as a meaningful application that, can turn the conventional information retrieval into simplest web-based approach. User can utilize this application via client/server network or internet. The development of promotion used book system prototype indicates the change of application development. This will lead to extensive improvement of promotion used book application that positively impacts the future technology.
