# **DESIGNING AND DEVELOPING A WEB-BASED POST GRADUATE APPLICATION SYSTEM FOR UUM**

A thesis submitted to the Graduate School in partial  
fulfillment of the requirements for the degree  
Master of Science (Information Technology)  
Universiti Utara Malaysia

By

Faraj Ali Faraj Saad

## **PERMISSION TO USE**

In presenting this thesis of the requirements for a Master of Science in Information Technology (MSc. IT) from Universiti Utara Malaysia. I agree that the University library may make it freely available for inspection. I further agree that permission for copying of this thesis in any manner, in whole or in part, for scholarly purposes may be granted by my supervisor or in their absence, by the Dean of Graduate School. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Request for permission to copy or make other use of materials in this thesis, in whole or in part, should be addressed to:

Dean of Research and Graduate Studies

Colleges of Arts and Sciences

Universiti Utara Malaysia

06010 Sintok

Kedah Darul Aman

## **ABSTRACT**

The internet technologies are rapidly increasing. The aim of the study is to design and develop a Web-based Postgraduate Application System (WPAS) for Universiti Utara Malaysia. The WPAS is a real-time application system which is free from traditional document processing procedures. It provides a convenient graphics user interface (GUI) for both student and admission department staff. It allows students to make self-apply for their selected apply online, degree program, view application status, and update application information time-to-time. It also allows administrator to manage student account, offer of place and admission information. All of the services are possible anywhere at any time.

## **ACKNOWLEDGEMENT**

Praise and gratitude to Allah, the Almighty, for bestowing me with great strength, patience, and courage in completing this project.

I am grateful to my supportive and helpful supervisor Dr. Faudziah Ahmad for assessing and guiding me in the completion of this research. With all truthfulness, without her, the project would not have been a complete one. She has always been my source of motivation and guidance. I am truly grateful for her continual support and cooperation in assisting me all the way through the semester.

Also I would like to thanks to Norida Muhd. Darus to give me feedback and comments regarding my project. I would like to present my thanks to my father, my mother and all my family who has always been there for me. Finally, I would like to express my appreciations to all my friends, colleagues, FTM staff and everyone who has helped me in this journey.

## **CHAPTER 1**

### **INTRODUCTION**

#### **1.1 Background**

Currently, applications at University Utara Malaysia (UUM) are processed manually. Every semester thousands of students apply for admission. From this large number of students only a handful of students get the chance to enter the university. Application form increase every semester and academic staffs need to check the documents before deciding either to accept or reject. This process is time consuming and application status can only be given to students after at least two weeks. A web-based application system solution is proposed. The aim of the system is to speed up processing, time and provide an instant decision.

#### **1.2 Problem Statement**

Prospective local and international students, who would like to know about this university usually, access the university's website to obtain relevant information. However, those who would like to apply have to send necessary application materials and application processing fee through postal and bank services. They are not able to apply via online.
