PERMISSION TO USE

In presenting this project in partial fulfillment of the requirements for a postgraduate degree from the Universiti Utara Malaysia, I agree that the University Library may make it freely available for inspection. I further agree that permission for copying of this project in any manner in whole or in part, for scholarly purposes may be granted by my supervisor or in their absence by the Dean of the Postgraduate Studies and Research. It is understood that any copying or publication or use of this project or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my project.

Requests for permission to copy or to make other use of materials in this project, in whole or in part, should be addressed to

Dean of Postgraduate Studies and Research

College of Arts and Sciences

Universiti Utara Malaysia

Abstract

The most important part of the testing attempt is the test case generation. As a modeling language, Unified Modeling Language (UML) is the most generally used to describe design specifications and analysis by both academic and industry. Therefore, UML becomes the sources of Test Case Generation. Test cases are usually generated from the requirement, and UML activity diagram illustrates the sequential control flows of activities what make it possible to generate test cases for activity diagrams. This research proposes an approach to automatically generate test cases directly from UML activity diagram using activity graph. Therefore, this research will create an algorithm and implement it on a prototype using the UML activity diagram as an input to generate the test cases. The result of all these test cases will be compared to the result that has been generated manually to evaluate the usability and reliability of the proposed algorithm.

ACKNOWLEDGEMENTS

First, I would like to express my appreciation to Allah, the most merciful and, the most compassionate, who has granted me the ability and willing to start and complete this study. I do pray to His Greatness to inspire and enable me to continue the work for the benefits of humanity.

After that, my most profound thankfulness goes to my supervisor Dr. Nor Laily Hashim for her scientifically proven and creativity encouraging guidance and great support in this study.

Last, I wish to thank my Father, Mother who were always there for me by giving everything they have, my brothers and sisters for their love and support.

Thank you UUM.

Yasir Dawood Salman

TABLE OF CONTENTS

	Page
PERMISSION TO USE	I
ABSTRACT	II
ACKNOWLEDGEMENTS	III
TABLE OF CONTENTS	IV
LIST OF FIGURES	VII
LIST OF TABLES	VIII
CHAPTER ONE : INTRODUCTION	
1.1 Introduction.....	1
1.2 Problem Statement.....	2
1.3 Research Questions.....	3
1.4 Research Objectives.....	3
1.5 Scope of Research.....	4
1.6 Significance Of Study.....	4
1.7 Organization of the report.....	5
CHAPTER TWO : LITERATURE REVIEW	
2.1 Introduction	6
2.2 Software Quality Assurance	6
2.3 Validation and Verification	7

2.4 UML Activity Diagram.....	8
2.5 Activity graph	10
2.6 Test Case Generation.....	12
2.7 General testing methods	13
2.8 Other model-based testing techniques.....	14
2.8.1 Labelled Transition System.....	14
2.8.2 <i>Input/output Explicit Activity Diagram</i>	15
2.9 Summary.....	16

CHAPTER THREE: METHODOLOGY

3.1 Awareness of Problem.....	18
3.2 Suggestion.....	19
3.3 Development.....	19
3.4 Evaluation.....	21
3.5 Conclusion.....	22
3.6 Summary.....	22

CHAPTER FOUR : ALGORITHM FOR GENERATING TEST CASE AND TESTING RESULTS

4.1 Algorithm for Generating Test Cases	23
4.2 Result And Testing	27
4.2.1 Automatic generate for the test case from the login activity diagram ..	27

4.2.2 Automatic generate for the test case from the download assignment activity diagram	31
4.2.3 Automatic generate for the test case from the change password activity diagram	34
4.2.4 Automatic generate for the test case from the “search” activity diagram.	44
4.3 Summary.....	48
 CHAPTER FIVE : CONCLUSION	
5.1 Findings and Results.....	49
5.2 Limitation.....	49
5.3 Future Work.....	50
5.4 Conclusion.....	51

- 4.3 Activity Diagram for “Login” with node number.
- 4.4 The program result for the “login” activity diagram.
- 4.5 Activity Diagram for “Download Assignment”
- 4.6 Activity Diagram for “Download Assignment” with node number.
- 4.7 The program result for the “Download Assignment” activity diagram.
- 4.8 Activity Diagram for “Change Password”
- 4.9 Activity Diagram for “Change Password” with node number.
- 4.10 The program result for the “Change Password” activity diagram.
- 4.11 Activity Diagram for “Forum Search”
- 4.12 Activity Diagram for “Forum Search” with node number.
- 4.13 The program result for the “Forum Search” activity diagram.

LIST OF TABLES

- 4.1 The generated test cases for “Login”
- 4.2 The generated test cases for “Download Assignment”
- 4.3 The generated test cases for “Change Password”
- 4.4 The generated test cases for “Forum Search”

CHAPTER ONE

INTRODUCTION

1.1 Introduction

The new paradigm to develop the software is to use a Model-driven approach (France et al, 2006). Among the advantages behind it is the increasing of efficiency with its supporting in many domains like solution, development, and business problems. In the development of the model-driven software, Unified Modelling Language (UML) has become the industry standard for object oriented software development, also UML diagrams are effective enough to hold most of functioning phase (Usman & Nadeem, 2009).

One of the important challenges in software testing is the test cases generation. It is especially complicated when a system contains simultaneously executing participants, since a system like that can show different responses depending on the simultaneous occurrence conditions. A UML activity diagram is a suitable modelling language for describing interactions between system objects given that an activity diagram can be conveniently used to capture business processes, workflows and interaction scenarios (Kim et al, 2007).

There are many programs and applications with different purposes and types which have been used everywhere. Test case generation is one of the most important elements for the testing efforts for programs and applications (Linzhang et al, 2004).
