ABSTRACT

This study examined the factors influencing workplace bullying among nurses in the public hospitals in Jordan. The objective of the study was to examine the influence of job demand and job control on workplace bullying among nurses in Jordan. The role of personality as the moderating factor in this relationship was also examined. The study utilized a survey method and questionnaires were distributed to a sample of 750 nurses at one of the biggest public hospitals in Jordan. The data was analysed using regression analysis techniques, and hierarchal regression analysis. The study found that the level of workplace bullying among nurses as being high. The study also found a positive and significant relationship between job demand and workplace bullying. The study also found that there appeared a significantly negative relationship between job control and workplace bullying. Personality too appeared as partial moderator in the relationship between job demand and job control on workplace bullying. Personality traits of conscientiousness and openness to experience were found to moderate the relationship between job control and workplace bullying. Other than that, emotional stability was found playing a role in moderating the relationship between work pressure and workplace bullying. The finding of this study strengthens earlier research findings regarding the importance of personality in influencing workplace bullying. It can thus be concluded, that understanding job demand and job control factors in the workplace and managing them effectively can help reduce incidents of bullying among nurses in Jordanian hospitals. Furthermore, the different personality traits of nurses and the interaction of these traits with job demand and job control factors, show the workplace bullying differences among nurses in the Jordanian hospitals.

Keywords: Job Demand, Job Control, Personality, Workplace Bullying

ABSTRAK

Kajian ini menguji faktor-faktor penentu yang mempengaruhi tingkah laku membuli di tempat kerja dalam kalangan jururawat di hospital awam di Jordan. Objektif kajian ini adalah untuk menguji pengaruh tuntutan kerja dan kawalan kerja terhadap tingkah laku membuli di tempat kerja dalam kalangan jururawat di Jordan. Peranan personaliti sebagai faktor penyederhana dalam hubungan ini juga turut diuji. Kajian ini menggunakan kaedah tinjauan. Sebanyak 750 soal selidik diedarkan kepada jururawat di satu hospital awam terbesar di Jordan. Data dianalisis menggunakan teknik analisis regresi, dan analisis regresi bertingkat. Kajian mendapati bahawa tahap membuli dalam kalangan jururawat adalah tinggi. Di samping itu, kajian juga mendapati bahawa terdapat hubungan positif dan signifikan antara tuntutan kerja dengan tingkah laku membuli di tempat kerja. Selain itu, terdapat hubungan negatif dan signifikan antara kawalan kerja dengan tingkah laku membuli di tempat kerja. Hasil kajian menunjukkan bahawa peranan personaliti sebagai penyederhana dalam hubungan antara tuntutan kerja dengan kawalan kerja terhadap tingkah laku membuli di tempat kerja adalah sebahagian sahaja. Ciri-ciri personaliti seperti kesungguhan dan keterbukaan menimba pengalaman didapati memainkan peranan sebagai penyederhana dalam hubungan antara kawalan kerja dengan tingkah laku membuli di tempat kerja. Selain itu, kestabilan emosi didapati memainkan peranan sebagai penyederhana dalam hubungan antara tekanan kerja dengan tingkah laku membuli di tempat kerja. Dapatan kajian ini mengukuhkan dapatan kajian terdahulu berhubung dengan kepentingan personaliti dalam menjelaskan tingkah laku membuli di tempat kerja. Kesimpulannya, insiden membuli dalam kalangan jururawat hospital di Jordan dapat dikurangkan dengan memahami faktor tentang tuntutan kerja dan kawalan kerja di tempat kerja serta mengurus kedua-dua faktor ini dengan efektif. Manakala ciri-ciri personaliti jururawat yang berbeza dan interaksi ciri-ciri personaliti ini dengan faktor tuntutan kerja dan kawalan kerja menunjukkan pengaruh yang berbeza terhadap tingkahlaku membuli di tempat kerja dalam kalangan jururawat di hospital di Jordan.

Kata kunci: Tuntutan Kerja, Kawalan Kerja, Personaliti, Buli Di Tempat Kerja

ACKNOWLEDGEMENT

In advance, I am grateful to the Almighty Allah for giving me the opportunity to complete my PhD thesis. May peace and blessing of Allah be upon His beloved Prophet Muhammad (SAW), his family and his companions. In completing this thesis, I owe a debt of gratitude and thanks to many persons and institutions that have supported me throughout this difficult yet challenging journey. While being thankful to all of them, I must register my gratitude to some in particular. First, I would like to express my deepest appreciation to my supervisor Prof. Dr. Hassan Ali for his patience, guidance and supporting me during the PhD journey. His advice and valuable comments has greatly helped me to remain focused and kept me on track until the completion of my thesis. I am very proud to have him as my supervisor.

I would also like to convey my gratitude to the ministry of health in Jordan, nurse's staff, and managers in Al Basheer hospital who have graciously given me the permission and provided me with their support during the data collection at the hospital. Without their support, I would not have been able to obtain the data for this thesis. I would like to thank Dr. Chandrakantan Subramaniam for granting me so much of his valuable time in assisting me with the data analysis. To all academic and administrative staff in University Utara Malaysia especially the College of Business my sincere gratitude goes to you.

I would like to express my never-ending appreciation and gratitude to people in Jordan; first and foremost, to my father Mohammad Atwan Nasralla Al Muala, who has been a great and wise teacher in my life and my lovely mother. To them a sincere flow of love, they accompanied me all the way. I would like to extend my gratitude to my beloved, nice, and important persons in my life my brothers Dr. Ayed (Abu

Zeid), Mr. Maher (Abu Mohammed), my sister Samia (Um Sondos), and to the soul of my beloved sister Najah (Um Jawad) who passed away during my PhD journey.

All thanks goes to my friends in Jordan, Saudi Arabia, Australia, and Malaysia who have been very kind to encourage me in my study. Last but not least, to my family, friends, teachers, brothers and sisters, I thank you so much for continuously giving me the undivided support and eternal prayers. To all of you, I have this to say: I love you, respect you, pray for you, and May Allah bless you.

CHAPTER ONE

INTRODUCTION

1.1 Background of the Study

Bullying commonly occurs in the workplace and is viewed as being among the worst behaviors impacting employees and organizations (Liefoghe & Mac Davey, 2001; and Namie, 2003). The impact of bullying goes beyond individual or organizational performance as it damages the health of the victim and modifies the course of family relationships within society.

The pioneering expression of workplace bullying was made by British journalist, Andrea Adams in 1988 who linked bullying to adult misery in her book entitled, “Workplace Bullying”, which was published in 1992 (Lee, 2000). According to Heinz Leymann, the founder of the International Anti-Bullying Movement, bullying has affected individuals’ health. Leymann German psychiatrist who established the world’s first work trauma clinic in Sweden in the 1980s, documented traumatization stemming from sustained psychological terrorization at work for which the term ‘mobbing’ was used (Namie, 2003b). Literature concerning bullying originated from Europe, specifically from the Scandinavian countries.

For instance, in Norway, Einarsen, Raknes & Matthiesen (1994) argued that in the eighties and before, sexual harassment was a public issue in Europe, and that it is now time to begin the discussion of non-sexual harassment issues in the workplace like bullying. According to them, workplace bullying is considered as a negative action

only

including verbal aggression, isolation, and name-calling, which arises between employees where the victims are unable to defend themselves from this type of action. In addition, studies from the UK consistently reveal that 25% of the workplace bullying victims quit their jobs owing to the treatment received (Rayner, 1999).

The study conducted by Zapf, Knorz, and Kulla (1996) is consistent with Leymann *et al.*, (1996), and Einarsen & Raknes (1997), stating that mobbing is a psychological and non-physical type of violence. Researchers describing workplace bullying (e.g. Einarsen *et al.*, 1994; Einarsen, 2000; Einarsen & Skogstad, 1996; Leymann, 1993; Zapf, 1999a) have utilized varying terminologies. Most researchers hailing from UK, Ireland, Australia, and Northern Europe make use of the term ‘bullying’ while Scandinavian and German researchers prefer the term ‘mobbing’ (Einarsen, 2000, p. 380; and Zapf & Einarsen, 2001, p. 369). Leymann added that there exists a distinction between mobbing in the workplace and bullying in the school, which is characterized by physical violence, whereas it is more psychological in the workplace (Olweus, 1993).

It is widely known that stress negatively effects health and that bullying is a situation characterized by high stress, which could lead to permanent psychological and physical damage (Leymann, 1996). This is reinforced by Vartia’s (2001) and Gary, Ruth & Namie’s (2003) assertion that workplace bullying causes adverse consequences to the victim’s health. The Workplace Bullying Institute (WBI) considers bullying as attributable to the core of stress that is faced by the bully’s victim (Namie, 2003a). Organizations began focusing on the issue of workplace bullying more seriously in the 1990s as the health of the employee impacts on organizational costs. Workplace bullying
