## **Permission to Use**

In presenting this thesis in fulfilment of the requirements for a postgraduate degree from Universiti Utara Malaysia, I agree that the Universiti Library may make it freely available for inspection. I further agree that permission for the copying of this thesis in any manner, in whole or in part, for scholarly purpose may be granted by my supervisor(s) or, in their absence, by the Dean of Awang Had Salleh Graduate School of Arts and Sciences. It is understood that any copying or publication or use of this thesis or parts thereof for financial gain shall not be allowed without my written permission. It is also understood that due recognition shall be given to me and to Universiti Utara Malaysia for any scholarly use which may be made of any material from my thesis.

Requests for permission to copy or to make other use of materials in this thesis, in whole or in part, should be addressed to:

**College of Arts and Sciences**

**Universiti Utara Malaysia**

**06010 UUM Sintok**

**Kedah Darul Aman**

## **Abstrak**

Bilangan kanak-kanak autisme semakin meningkat di seluruh dunia. Kanak-kanak autisme mempunyai tiga masalah utama iaitu daripada aspek bersosial, berkomunikasi dan tingkah laku. Terdapat kira-kira 50 peratus daripada individu dengan masalah autisme mempunyai masalah dalam membangunkan fungsi bahasa mereka disebabkan berlakunya kemerosotan dalam komunikasi. Peranti mudah alih dengan permainan bersifat pendidikan digunakan bagi membantu individu untuk berasa lebih selesa dan lebih santai melakukan aktiviti tersebut. Terdapat pelbagai aplikasi mudah alih yang tersedia untuk individu autisme. Namun, mereka sukar untuk menggunakan aplikasi tersebut. Ini terutamanya dari segi reka bentuk antara muka pengguna aplikasi tersebut. Kajian ini menganalisis aplikasi sedia ada untuk menentukan prinsip reka bentuk berkaitan dengan Aplikasi Didik Hibur yang sedang dikaji. Lima aplikasi telah dikaji dalam analisis ini. Objektif kajian ini ialah untuk mengenal pasti prinsip reka bentuk yang penting dalam mereka bentuk sesebuah aplikasi. Analisis ini telah mengenal pasti lima belas cadangan bagi prinsip reka bentuk tersebut. Cadangan tersebut ialah paparan antara muka yang mudah, saiz imej, beberapa gambar, ikon halaman rerumah, warna, mempunyai imej yang serupa dengan objek kehidupan sebenar, penggunaan aplikasi bagi penjaga, pelayaran, perlindungan kata laluan, audio yang bersesuaian dengan imej, bahasa aplikasi yang digunakan, penilaian parameter untuk mengukur pertumbuhan kanak-kanak, pilihan untuk memuat turun gambar, PECS berasaskan komunikasi dan fungsi sebutan ayat. Cadangan-cadangan ini ditawarkan dalam kajian ini ke arah mereka bentuk dan membangunkan aplikasi prototaip untuk kanak-kanak autistik. Kajian ini memperkenalkan prinsip reka bentuk sistem didik hibur yang digubal untuk membantu membangunkan kemahiran komunikasi kanak-kanak dengan spektrum gangguan autisme. Kajian ini juga menerangkan reka bentuk, pelaksanaan, dan penilaian aplikasi *ICanTalk* yang merupakan aplikasi didik hibur mudah alih yang boleh digunakan untuk meningkatkan kefahaman dan kemahiran komunikasi pengguna. Di samping itu, aplikasi ini membantu mereka untuk berhubung dengan masyarakat dan persekitaran. Ini terutamanya melibatkan kanak-kanak autistik yang mengalami masalah komunikasi. Aplikasi ini membolehkan penjaga untuk mencipta kandungan peribadi menggunakan gambar dan audio pada peranti mudah alih mereka (*tablet*). Penilaian aplikasi dengan guru menunjukkan bahawa aplikasi ini sangat berguna dan mudah untuk digunakan. Kesimpulannya, berdasarkan keputusan penilaian, didapati bahawa aplikasi *ICanTalk* adalah berkesan dalam membantu kanak-kanak autistik yang mengalami masalah komunikasi.

## **Abstract**

The number of children with autism is increasing worldwide. Children with autism face three major problems; socializing, communicating, and behaviour. Approximately 50% of all individuals with autism have difficulties in developing functional language owing to communication deterioration. Mobile devices with installed educational games help these individuals feel more comfortable and relaxed doing such activities. Although numerous mobile applications are available for individuals with autism, they are difficult to use; particularly in terms of user-interface design. This study analysed the existing apps in order to determine the design principles applicable to the Edutainment App being studied. Five applications were involved in this analysis. As outlined in the objectives of this study, identifying these design principles is important in designing the app. The analysis identified fifteen suggestions for the design principles. These suggestions addressed, simple interfaces; image size; number of pictures; home page icon; colour; having images identical to real life objects; the use of caregivers; navigation; password-protection; audio appropriate to the images; the app language used; evaluating parameters to measure the child's growth; option for photo loading; PECS-based communication; and sentence pronunciation function. These recommendations are offered by this study towards designing and developing a prototype app for autistic children. This study introduces an edutainment-system design principle formulated to help develop the communication skills of children with autism-spectrum disorders. This study also describes the design, implementation, and evaluation of the ICanTalk app-a mobile edutainment app that can be used to improve users' understanding and communication skills and help them to connect with society and the surrounding environment particularly for autistic children with communication difficulties. This app allows caregivers to create personalized content using pictures and audio on their mobile devices (tablets). The evaluation of the app by teachers suggests that it is useful and easy-to-use. In conclusion, based on the evaluation results, it is found that the ICanTalk app is effective in helping autistic children with communication difficulties.

## **Acknowledgment**

### **In the Name of Allah, the Most Gracious and Most Merciful**

First of all I would like to thank ALLAH for giving me the strength and health to accomplish this research.

My deepest thanks my supervisor **Dr. Azham Bin Hussain** for tireless efforts, suggestions, and guidance to make this work success with attention and care.

My deep grateful to the Ministry of Education Malaysia, Jabatan Pendidikan Negeri Perlis and Sekolah Kebangsaan Pendidikan Khas Kangar, Perlis in Malaysia for the help to complete my Master program. I would also like to thank the teachers who were enthusiastic about participating in the study.

Also, like to thank Mr. Selvarajah (Ministry of Education Malaysia), and Mr. Hakim Khan (Jabatan Pendidikan Perlis) for their cooperation in conducting this research.

I want to express my gratitude and dedicate this thesis to my mother. My goal would not have been achieved without her. She has supported and is continuously praying for me during my studies. And I pray to Allah to keep her safe and well.

My deepest and heartfelt gratitude, loves, thanks and appreciation for my beloved siblings, who are a part of my happiness, success, and the inspiration that led me for the quest for knowledge and self-empowerment through night and day. I hope I can put a smile on their faces for giving back their tremendous support. Thank you for giving me the strength to chase and reach my dreams.

I dedicate this thesis to my wife and my daughters who unremittingly supported me during my years of study. They made this work possible.

Finally, I express my deepest thanks to Ministry of Electric in Iraq for help and support me and arranged all facilities to make my study (Master Information and Technology) easier.

**Thank You All.**

**DECEMBER 2015**

# **CHAPTER ONE**

## **INTRODUCTION**

### **1.1 Introduction**

This chapter explains the disability of children with Autism in general and the assistive technology provided through the mobile device. It also provides the definitions of Autism spectrum disorder and Edutainment Apps. Besides, it discusses the state of the existing apps for autistic children.

#### **1.1.1 Disabilities of Children with Autism**

Throughout the world, there has been an increase in the number of children with disabilities (Dandashi, Alja'Am, & Saleh, 2013). At present, more than a billion people (or approximately 15% of the global population) are living with disabilities, and this number includes children (Kbar & Aly, 2014). Disability thus impacts society because families of disabled individuals are part of, and interact within, the society (Lee, Choi, Song, & Shin, 2014).

The global Education For All (EFA) and UN Convention on the Rights of Persons with Disabilities stressed the importance of education for people with disabilities and thus they encouraged the development of an approach to educate them (Lehtomäki, Tuomi, & Matonya, 2014). According to the Portuguese Child Support Institute, children can develop abilities, such as evolving attention skills, strengthen the memory, advancing and expanding imitation and imagination, through playing (Proença, Quaresma, & Vieira, 2014). This means that playing is an essential part of learning. Without incorporating play, learning can become abusive and cruel (Stasolla, Caffò, Picucci, & Bosco, 2013). One wrong belief is that children with disabilities are incapable of playing. The truth is that such children could play, only in a manner differs from
