The author bears full responsibility for the checking whether material submitted is subject to copyright or ownership right. University Utara Malaysia (UUM) does not accept any liability for the accuracy of such comment, report and other technical and factual information and the copyright or ownership rights claims.

The author declares that this dissertation is original and his own except those literatures, quotations, explanations and summarization which are duly identified and recognized. The author hereby granted the copyright of this dissertation to College of Business, Universiti Utara Malaysia (UUM) for publishing if necessary.

ACKNOWLEDGEMENT

In the name of Allah, Most Gracious and Most Merciful Alhamdulillah, praised to Allah S.W.T for the completion of this project paper. I would like to express my gratitude and appreciation to those who helped, supported and encouraged me, and made this accomplishment possible.

First, I would like to thank my supervisor, Prof. Madya Dr. Kamal Bin Ab Hamid. There is no word to thank you for all that you have done for me. Your time, guidance and continuous support have made this project possible. I will carry the lessons you have taught me into every adventure I encounter throughout life.

My sincere appreciation to the Director of Gua Musang Hospital because allowing me to distribute the questionnaire. To all respondents, my honest appreciation for taking the time and effort to participate in this research and without your participation, this research will never be completed. Lastly, my special thanks to my family and friends who have created an environment of support and encouragement. Hope this research would benefit the nurses in future as I put all my efforts on this and appreciate others who recognize my work. Million thanks to all.

Thank You.

ABSTRACT

The purpose of the study is to investigate the relationship between leadership style, social support and workload with stress among nurses in Gua Musang Hospital, Kelantan. The health professionals are a group at significant risk from the negative effects of stressful including nurses. Through this study, data were collected successfully from 96 nurses of Gua Musang Hospital and data were analyzed using Statistical Package for Social Science (SPSS) version 22.0. Techniques of data analysis used in this study are frequency analysis, descriptive analysis and reliability analysis. Pearson correlation analysis was performed to examine the relationship between leadership style, social support and workload with stress and also to answer the objective of this research. Besides that, multiple regression analysis is conducted to analyse the relationship between independent variables and dependent variable. From the research finding, it provides better understanding of the factor influence the stress among nurses. The findings revealed that social support and workload was significantly influence to the stress while leadership style was not significantly influence to the stress.

Keyword: Leadership style, Social Support, Workload and Stress

ABSTRAK

Kajian ini bertujuan mengenal pasti hubungan antara gaya kepimpinan, sokongan sosial dan beban kerja dengan tekanan dalam kalangan jururawat di Hospital Gua Musang, Kelantan. Warga kerja kesihatan, termasuklah jururawat merupakan golongan individu yang paling kerap berhadapan dengan kesan negatif tekanan jiwa. Untuk memenuhi tujuan kajian ini, data telah dikumpul dengan jayanya daripada 96 orang jururawat yang berkhidmat di Hospital Gua Musang. Data kemudiannya dianalisis dengan menggunakan perisian pakej statistik untuk sosial sains (*SPSS*) versi 22.0. Kajian turut menggunakan pendekatan analisis kekerapan, analisis deskriptif dan analisis kebolehpercayaan untuk menganalisis data. Analisis korelasi Pearson telah dijalankan untuk meneliti hubungan antara gaya kepimpinan, sokongan sosial dan beban kerja dengan tekanan dan juga untuk menjawab objektif kajian. Selain itu, analisis regresi berganda telah dikendalikan untuk menganalisis hubungan antara pemboleh ubah bersandar dengan pemboleh ubah tak bersandar. Hasil kajian memberikan pemahaman yang lebih baik tentang faktor yang menyebabkan tekanan dalam kalangan jururawat. Dapatan kajian memperlihatkan bahawa terdapat hubungan yang signifikan antara sokongan sosial dan beban kerja dengan tekanan, manakala gaya kepimpinan tidak mempunyai hubungan yang signifikan dengan tekanan.

Kata kunci: Gaya kepimpinan, sokongan sosial, beban kerja dan tekanan

CHAPTER 1

INTRODUCTION

1.1 Introduction

This chapter explains the background of the study, problem statement, research objectives, research questions and significance of the study. Following that, this chapter also highlights the scope and also the organization of chapter in this study.

1.2 Background of the Study

In Malaysia, nurse is the most necessary component and largest workforce in the areas of healthcare. Nurses will work under the instructions provided by physicians and they are also trained to work independently in case of emergencies. Hundred years ago, Florence Nightingale defined nursing as the function of utilizing the environmental of a patient for their recovery (Wilkins, 2007). Nightingale agreed that having a healthy, clean, well-ventilated, and peaceful environment would result in early recovery of sick patients. In view of Nightingale's definition, nursing consists of three aspects: patient care in the hospital, nursing service administration and nurse's education (Arnstein, 1956). However, she was concerned of the ways how a patient's disease was affected by his or her state of mind, worries, the environment, and the sound levels around him or her
