

# On 2 February 2012, the commercial plant producing radiopharmaceuticals in Poland, developed by Synektik SA, was officially opened at Świętokrzyskie Center of Oncology in Kielce

On 2 February 2012, Synektik SA Group officially launched the radiopharmaceuticals production in a facility which will serve the commercial market. The project finished the two-years' investment by the Company which cost PLN 19 million.

The facility was launched within the Nuclear Medicine Plant of Świętokrzyskie Center of Oncology in Kielce. The Centre is among the prime centres in Poland serving oncology care, diagnostic services, treatment and rehabilitation. The featured dedicated and

custom equipped rooms will be used for radio-isotope production, synthesis and quality assurance.

The project will help to satisfy large share of the demand for radiopharmaceuticals in Poland. It will also make radiopharmaceuticals more accessible for the Polish patients and reduce costs of cancer diagnostics in Poland.
