Fishes of the Choctawhatchee River System in Southeastern Alabama and Northcentral Florida

Abstract

The diversity and distribution of fish species occurring in the Choctawhatchee River drainage in southeastern Alabama and northcentral Florida were surveyed to obtain historical baseline information. Three hundred seventy-four sites were evaluated for species diversity and distribution in the drainage, including compilation of unpublished records from southeastern natural history museums. The greatest diversity at any single site was 37 species. Sixty-eight sites were represented by 15 species or more, and 26 sites were represented by a single species. The most frequently encountered species includes *Gambusia holbrookii*, *Percina nigrofasciata*, *Esox americanus*, *Notropis texanus*, *Lepomis macrochirus*, *Cyprinella* n. sp. cf *venusta*, *Notropis amplamala*, and *Aphredoderus sayanus*. New records for *Hybopsis* n. sp. cf *winchelli* and *Etheostoma parvipinne* were found in the drainage, and range extensions were found for 14 other species. Our study increases the known number of fish species in the Choctawhatchee River drainage to 132 species and two hybrids, including 83 native freshwater, 10 introduced freshwater, 24 estuarine, and 17 marine species.

INTRODUCTION

The decline of native fishes in the southeastern United States is a result of land-use changes, which has altered and fragmented habitats resulting in community degradation and isolation (Angermeier 1995, Warren et al. 1997, Neves et al. 1997, Master et al. 1998, Warren et al. 2000). The limited temporal fish distribution information for most southeastern Coastal Plain rivers draining the northern Gulf of Mexico has precluded our understanding of the changing fish assemblage composition (Cook 1959, Smith-Vaniz 1968, Douglas 1974, Lee et al. 1980, Swift et al. 1986, Gilbert 1992, Mettee et al. 1996, Ross 2001, Boschung and Mayden 2004). The Choctawhatchee River drains the southeastern Coastal Plain of Alabama and the northcentral panhandle of Florida. Despite drainage-wide land use changes, fish species richness in the drainage has remained high (Morris et al. 2003, Livingston 1992).

Detailed published accounts of the fishes of the Choctawhatchee River drainage are lacking. Hay (1885) produced the first publication on the fishes of the Choctawhatchee River drainage based on fishes collected from areas mostly around St. Augustine and included additional collections from the Choctawhatchee River at Westville (Gilbert 2009). Prior to mid-1960, neither the distribution nor relative abundance of fish assemblages in southern Alabama was well understood. Swift et al. (1986) examined drainage-specific distributions of all fish species in both Alabama and Florida. Published works on Choctawhatchee River fishes were restricted to statewide distribution maps included within treatments for all Alabama fishes (Mettee et al. 1996, Boschung and Mayden 2004) and rare Florida fishes (Gilbert 1992).

The Choctawhatchee River drainage contains about 39% of the native fish species richness for the State of Alabama and 60% of Florida's native fish species richness. Mettee (1970) provided the most comprehensive treatment of species status information for the drainage. Swift et al. (1986) documented 74 native freshwater and 15 marine species, not including Choctawhatchee Bay. Mettee et al (1996) and Boschung and Mayden (2004) documented 80 species from 40 sites in the watershed; however, both of these studies reported information mostly based on Mettee (1970).

This study evaluates the distribution, introduction, and range extension of freshwater, marine, and estuarine species in the Choctawhatchee River drainage. Range extension in this paper refers to new records within the Choctawhatchee River drainage.

STUDY AREA

The Choctawhatchee River drainage lies in the Gulf Coastal Plain among four physiographic sections including the Alluvial Deltaic Plain, Dougherty Plain, Southern Red Hills, and Chunnenuggee Hills (Jenkins et al. 1972, Swift et al. 1986). The drainage encompasses about 13,856 km² in southeastern Alabama and northcentral Florida (Figure 1), which includes the East and West Branches of the Choctawhatchee River, Pea River, Wrights Creek, Holmes Creek, and tributaries into the Choctawhatchee Bay. The bay is separated from the Gulf of Mexico along most of its length, but connects through the Pensacola and East passes entering through the south at Destin Pass. The current study includes all estuarine and freshwater tributaries draining into Choctawhatchee Bay that were historically sampled.

The Choctawhatchee River drainage has experienced extensive land-use alterations during the 20th century (Morris et al. 2003). These anthropogenic alterations, combined with heavy rainfall and highly erodible soils, created increased sediment erosion that led to extensive non-point source pollution (Witmer et al. 2009). Recently, construction, road grading, chicken farming, cultivation on sloping areas, and clear cutting of timber have contributed to increased non-point source pollution, as well as accelerated stream bank and surface erosion rates (USDA 1993, Grace 2000).

METHODS

All voucher specimens are cataloged into the permanent research collection at the Florida Museum of Natural History (UF), Tulane Museum of Zoology (TU), the University of Alabama Ichthyological Collection (UAIC), and Indiana Biological Survey – Aquatic Research Center (INBS). Original data sheets from Troy University are stored at the Aquatic Research Center. To simplify spatial interpretation of the data, site numbers across all collections were labeled relative to increasing latitude.

Recent sampling methods generally followed protocols outlined by Morris et al. (2007) based on a random probability General Random Tesselated Sample (GRTS) survey design (Stevens and Olsen 2004). However, other unpublished collection data includes information gathered by ichthyologists from southeastern universities including the University of Alabama, Tulane University, and University of Florida (Table 1). Collections described herein were made for many

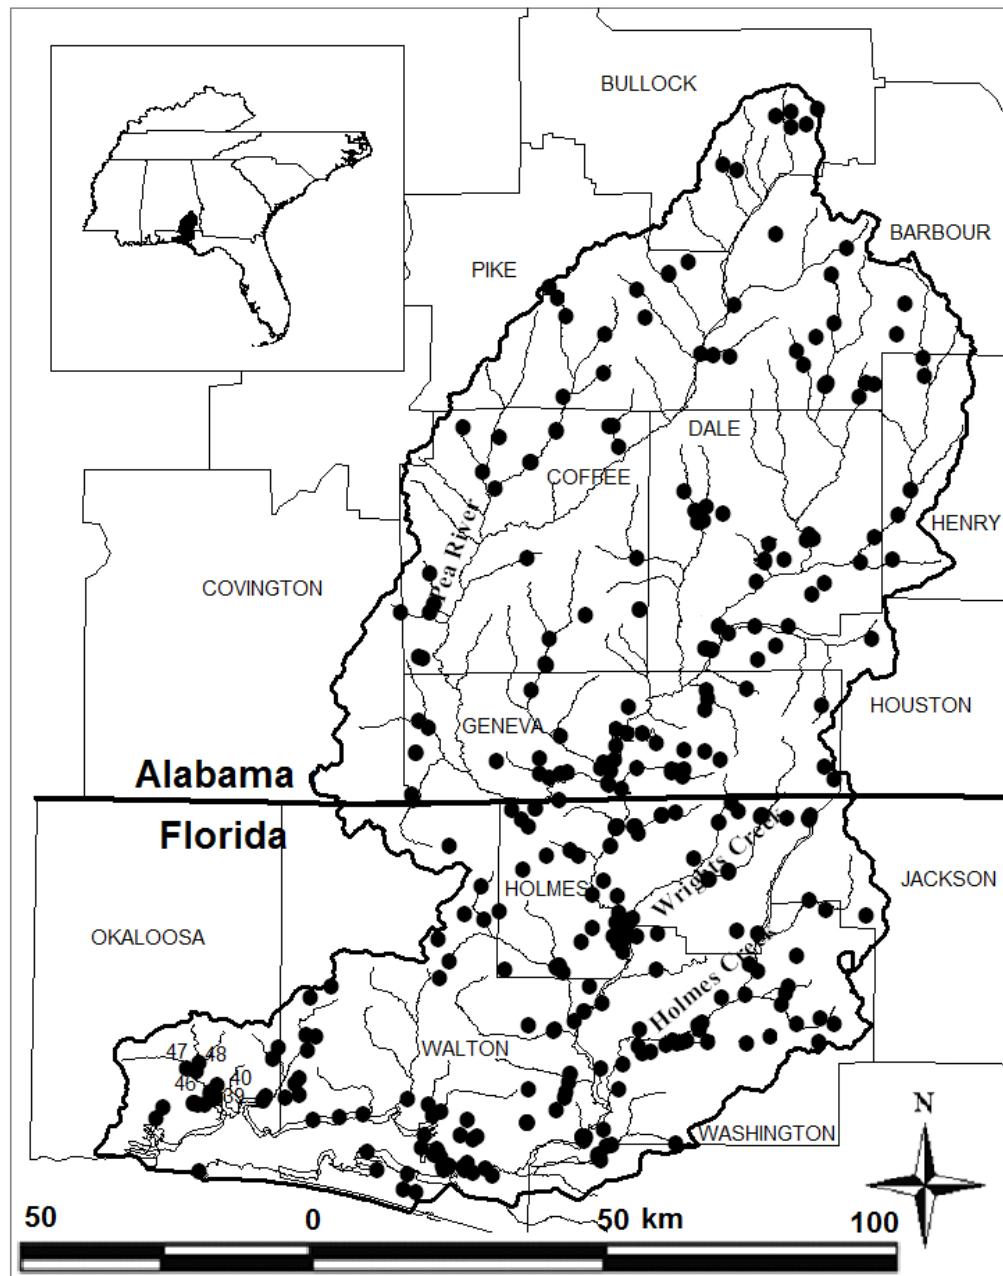

Figure 1. Sites sampled for survey of the fishes of the Choctawhatchee River drainage in southeast Alabama and northcentral Florida.

purposes and used a variety of gear types, ranging from seines to various forms of electrofishing. All habitats in the stream reach were sampled relative to occurrence using various sized seines or a Smith-Root Model 12-B battery

powered backpack electrofishing unit. All large specimens were identified in the field and released, but voucher specimens were retained from each site. Each species' relative abundance was recorded. Records for *Ctenopharyngodon idella*, *Cyprinus carpio*, *Morone saxatilis*, *Morone saxatilis* x *M. chrysops*, and *Perca flavescens* do not have specific locations but are based on unpublished information. Specimens, when retained, were preserved in 10% formalin, rinsed in tap water, transferred to either 70% ethanol or 55% isopropanol, and identified using Etnier and Starnes (1994), Mettee et al. (1996), and Boschung and Mayden (2004).

In the species accounts, species are designated as freshwater (F), marine invaders (M), or those that are anadromous, catadromous, typically occupy both habitats or estuarine water (F/M). Introduced species are also noted (I). Species are arranged in phylogenetic order by family and alphabetically by species within family, with all taxonomy and common names following Page et al. (2013), with the exception of the recently described *Notropis amplamala* (formerly *N. buccatus*, Pera and Armbruster 2006), *Elassoma gilberti* (formerly *E. okefenokee*, Snelson et al. 2009), and the recognition of some subspecies as full species and six others that are recognized as undescribed species. Relative abundance information is defined by Smith (1965), Burr and Warren (1986), and Simon et al. (2002).

RESULTS AND DISCUSSION

Drainage Diversity

The present faunal list for the Choctawhatchee River drainage includes 83 freshwater, 17 marine and 24 estuarine species. Range extensions add to the previously known distribution information for the Choctawhatchee and Pea River drainages. Accurate distribution information is essential to assess an accurate conservation status of freshwater fishes for the southeastern United States (Warren et al. 1997, 2000).

One hundred-thirty two fish species representing 28 freshwater and marine families were collected from the 374 sites within the Choctawhatchee River drainage from 1899 to 2001 (Tables 1 & 2, Appendix 1). The greatest diversity at any single site was 37 species at the Choctawhatchee River on Alabama Hwy 2, about 6 miles south of Geneva, AL. Sixty-eight sites were represented by 15 species or more, and 26 sites were represented by a single species. Through accidental or deliberate release, 10 non-native species of freshwater fish have become established and a single hybrid has been stocked for recreational purposes. Currently, two species require conservation or protection efforts due to

Table 1. Localities of all sites sampled in the Choctawhatchee River drainage. Site numbers correspond to species information reported in the text and are shown in Figure 1. <i>Paralichthys lethostigma</i>	2	0.53

anthropogenic impact. *Acipenser oxyrinchus desotoi* is federally listed as threatened and *Etheostoma okaloosae* is currently endangered, but proposed to be reclassified as threatened (U.S. Fish and Wildlife Service 2010).

Resurrection of previously synonomized names and species descriptions

Resurrection of three species includes *Semotilus thoreauianus* (formerly *S. atromaculatus*; Johnston and Ramsey 1990), *Gambusia holbrooki* (*G. affinis*; Angus and Howell 1996), and *Lepomis miniatus* (*punctatus*; Warren 1992). Newly described species include *Percina austroperca* (*Percina caprodes*; Thompson 1995), *Notropis amplamala* (*Ericymba buccata*; Pera and Armbruster 2006), *Etheostoma colorosum* (undescribed *Etheostoma* “*Ulocentra*” species; Suttkus and Bailey 1993), a revision of the *Pteronotropis hypselopterus* complex,

which provided a description of *Pteronotropis merlini* (Suttkus and Mettee 2001), and *Elassoma gilberti* (*E. okefenokee*; Snelson et al. 2009).

Historical Choctawhatchee River fish assemblages and range extensions

Smith-Vaniz (1968) reported 50 species from 59 sites in the Choctawhatchee River drainage and suggested that another 21 species were probable based on known distribution and habitat requirements. *Amia calva* has been confirmed from the drainage, while *Pteronotropis hypselopterus* is not known to occur in the watershed; *Lythrurus roseipinnis* and *Notropis telescopus* are considered misidentified and do not occur in the drainage. *Notropis harperi* was reported from the Choctawhatchee drainage by Smith-Vaniz (1968), but was not found by Mettee et al. (1996) so the record was questioned since it is more abundant in the adjacent watershed. We found this species in our 2001 surveys and confirm its presence in highly specialized spring run habitat.

Mettee (1970), Mettee et al. (1996), and Boschung and Mayden (2004) documented 80 species of fish from 40 collections in the drainage. First records for *Alosa chrysocloris*, *Hybopsis* n. sp. cf. *winchelli*, and *Lepomis auritus* are reported in this current study. *Ichthyomyzon gagei*, *Lepisosteus osseus*, *Alosa alabamae*, *Ameiurus nebulosus*, *Noturus funebris*, *Esox niger*, *Strongylura marina*, *Fundulus escambiae*, *Morone saxatilis*, *Elassoma evergladei*, *Lepomis gulosis*, and *Mugil cephalus* were confirmed by this study from Smith-Vaniz's (1968) hypothetical list. Mettee et al. (1996) did not confirm *Lampetra aepyptera*, *Atractosteus spatula*, *Moxostoma carinatum* (note: *M. carinatum* does not occur in the drainage), *Leptolucania ommata*, *Lucania goodei*, *Elassoma gilberti*, and *Enneacanthus gloriosus*. Our inventories increased the cumulative list of species found in Alabama and Florida portions of the drainage, including brackish waters, by 39 species. Many of the added species are either marine, estuarine transients, or large river species. Introduced species *Ctenopharyngodon idella*, *Cyprinus carpio*, *Ameiurus catus*, and *Morone chrysops* x *M. saxatilis* first appeared in the drainage after 1985.

Fourteen range extensions within the drainage were found based on a more comprehensive sampling effort over the last eight years. Two new localities for *Etheostoma parvipinne* were found in Barbour and Geneva counties, Alabama. *Anguilla rostrata* and *Notropis chalybaeus* were new additions to the Pea River, while range extensions include *Notropis harperi*, *Opsopoeodus emiliae*, *Minytrema melanops*, *Ameiurus melas*, *A. nebulosus*, *Noturus funebris*, *Ambloplites ariommus*, *Centrarchus macropterus*, *Lepomis marginatus*, *L. microlophus*, and *Etheostoma colorosum*.

Mettee et al. (1996) and Boschung and Mayden (2004) reported that *Anguilla rostrata* is limited to the lower portions of the Choctawhatchee and Pea rivers and a few tributaries, including Claybank, Hurricane, and Panther creeks. We extend *A. rostrata* in Panther, Corner, Justice Mill, and Spring creeks (Geneva County), Double Bridges Creek (Coffee County), and the Pea River (Pike County), Alabama, which are many of the headwater streams of the Choctawhatchee River. *Anguilla rostrata* was often collected from undercut bank habitats, where scouring of tree roots caused extensive root wad network exposure.

Notropis harperi had previously been recorded from headwater tributary sites in the Choctawhatchee drainage (Smith-Vaniz 1968), while we found the species in lower tributary streams such as Wallace Creek (Barbour County) and Boggy Branch (Geneva County), Alabama. Our Geneva County record is the southern-most for this species in the drainage. *Notropis chalybaeus* was previously known from the upper Choctawhatchee River, while we add records from the Pea River drainage. Our records include Whitewater Creek near Lowry Mill at Coffee County Road 224. *Opsopoeodus emiliae* was previously known from only two sites in the Choctawhatchee drainage (Mettee et al. 1996, Boschung and Mayden 2004), while we found the species at another eight sites in the mainstem Pea River and tributaries. We found the species at two Whitewater creek sites and Clearwater Creek (Coffee County), Wallace and Pages creeks (Barbour County), Panther and Spring creeks (Geneva County), and Pea River (Pike County), Alabama.

We note range extensions for *Minytrema melanops* from the lower mainstem of the Pea and Choctawhatchee rivers, including a tributary of Double Bridges Creek and the Little Choctawhatchee River. Our records from seven additional sites found the species to occur in the Whitewater (two sites) and Clearwater creeks (Coffee County), McSwain Creek (Barbour County), Spring and Corner creeks (Geneva County), and Klondike Creek (Dale County), Alabama.

Four sunfish species, including *Ambloplites ariommus*, *Centrarchus macropterus*, *Lepomis marginatus*, and *Lepomis microlophus* are more widely distributed than previously reported. Mettee et al. (1996) and Boschung and Mayden (2004) reported *Ambloplites ariommus* from the Choctawhatchee and lower Pea River. We report two additional records in Panther Creek (Geneva County) and the Pea River (Pike County), Alabama. Mettee (1970) and Boschung and Mayden (2004) collected *Centrarchus macropterus* from three sites in the drainage, while we also found it in Holmes Creek (Geneva County), Alabama.

The possible transplant introduction of *L. microlophus* has increased this species range, while *L. marginatus* is found throughout the drainage.

Etheostoma colorosum was reported from headwaters of the Pea Creek, Double Bridges Creek, Choctawhatchee River, and Little Choctawhatchee River, Alabama, whereas *E. parvipinne* was reported from Whitewater, Limestone, and Barnes creeks (Mettee et al. 1996). We found *E. colorosum* at additional sites in Pea Creek (Barbour County), Corner Creek (Geneva County), and Whitewater Creek (Coffee County), while *E. parvipinne* was found in Buckhorn Creek (Pike County) and Pauls Creek (Barbour County).

APPENDIX I

Petromyzontidae

Ichthyomyzon gagei, Southern Brook Lamprey (F).

Sites: 2, 48-49, 56, 62, 66, 67, 71, 80, 104, 105, 122, 126, 137, 244, 256, 275, 295, 316, 356

Sporadic in tributaries of upper Pea River. Occasional in lower Choctawhatchee River.

Acipenseridae

Acipenser oxyrinchus desotoi, Gulf Sturgeon (F/M).

Site: 13

Based on available data this species is rare and found only in Choctawhatchee Bay; however, specific gear is required to collect it. Others have collected Gulf Sturgeon in the Pea River in Coffee and Geneva counties in Alabama and in the mainstem of the Choctawhatchee River in Alabama and Florida (U.S. Fish and Wildlife Service 2003).

Lepisosteidae

Atractosteus spatula, Alligator Gar (F).

Sites: 38, 42

Rare; this species is known in Florida only from the lower Choctawhatchee River, but this species requires specific gear to be collected. The species has also been collected in the Escambia River and Econfina Creek (Gilbert 1992). Due to the size of adult individuals, most observations are based on anecdotal accounts. Individuals are usually seen in the mainstem Choctawhatchee River in Alabama and Florida (C. R. Gilbert, unpublished data).

Lepisosteus oculatus, Spotted Gar (F).

Sites: 8, 12-16, 18, 28, 34, 38, 110, 168, 193, 198, 232, 253, 260, 282

Sporadic in tributaries of lower Pea and Choctawhatchee rivers.

Lepisosteus osseus, Longnose Gar (F).

Sites: 8, 12-17, 20, 29, 32, 36, 43, 120, 156, 162, 198, 230, 232, 240, 260

Sporadic in tributaries of the lower Pea and Choctawhatchee rivers.

Amiidae

Amia calva, Bowfin (F).

Sites: 12, 14, 32, 110, 142, 162, 205, 210, 222, 230, 260

Sporadic in Choctawhatchee Bay, Holmes Creek, and Choctawhatchee River.

Anguillidae

Anguilla rostrata, American Eel (F/M).

Sites: 5, 12, 29, 40, 51-52, 60, 62, 74, 77, 120, 127, 130, 134, 140, 177, 182, 185, 203, 221, 230, 243-244, 253, 256, 263, 271, 274, 324

Occasional in the lower portions of the Choctawhatchee, Whitewater, and Pea river mainstems and a few tributaries, including Claybank, Hurricane, and Panther creeks.

Ophichthidae

Myrophis punctatus, Speckled Worm Eel (M).

Sites: 1, 25, 38, 56-57, 60, 64-66, 68, 71, 74-75, 78-80, 96, 101, 107, 110, 111, 120, 126, 141, 145, 156, 169, 177, 179, 182, 193, 198, 203-204, 216, 226, 229, 321, 340

Sporadic in Choctawhatchee Bay, Walton County, Florida.

Engraulidae

Anchoa mitchilli, Bay Anchovy (F/M).

Sites: 5, 18, 29

Sporadic in tributaries of Choctawhatchee Bay, Walton County, Florida.

Clupeidae

Alosa alabamae, Alabama Shad (F/M).

Sites: 5, 8, 10, 13, 18, 25, 29, 38, 149, 152, 170, 176, 190, 193, 195, 231, 276

Sporadic in Walton and Holmes counties, Florida; occurring in Geneva County, Alabama.

Alosa chrysochloris, Skipjack Herring (F/M).

Sites: 38, 43, 170, 199

Sporadic in Rushing Cutoff Creek and Choctawhatchee River in Florida.

Brevoortia patronus, Gulf Menhaden (M).

Sites: 7, 28

Sporadic in Choctawhatchee and Jolly Bays, Walton County, Florida.

Dorosoma cepedianum, Gizzard Shad (F).

Sites: 28, 36, 114, 152, 260

Sporadic in Jolly Bay, Choctawhatchee, and Dead rivers.

Dorosoma petenense, Threadfin Shad (I, F).

Sites: 12, 14, 18, 29, 140, 230

Sporadic in Jolly Bay and Choctawhatchee River.

Cyprinidae

Ctenopharyngodon idella, Grass Carp (I, F).

Rare; sporadic based on reports of the species from Florida (C.R. Gilbert, unpublished data).

Cyprinella n. sp. cf. *venusta*, Blacktail Shiner (F).

Sites: 5, 11, 14, 38-39, 41, 77, 108, 111, 120, 130-131, 134, 136, 138, 140, 145, 149, 152, 157, 163, 165, 168, 170, 177, 180, 181, 182, 184, 190, 191, 193, 195, 197-203, 212, 217, 223, 228, 230-231, 233, 236, 239, 240, 242-245, 247, 249-251, 253, 256, 262-263, 265, 268-269, 274, 277, 280-281, 283, 285, 291-293, 295-297, 299-300, 302, 303, 305, 307, 312-313, 316, 318-319, 322-328, 330-332, 337-338, 341, 344-345, 364, 369

Generally distributed and common to abundant in tributaries of lower Pea and Choctawhatchee rivers. There are data (primarily genetic) that suggest populations in coastal drainages from the Choctawhatchee west to the Perdido represent an undescribed species (J. Gold, Texas A&M University, unpublished data).

Cyprinus carpio, Common Carp (I, F). Sporadic and known only from Dead River, Geneva County, Alabama.

Hybopsis n. sp. cf. *winchelli*, Coastal Chub (F).

Sites: 11, 37-38, 40, 96, 108, 114, 127, 134, 136, 140, 145, 149, 152, 157, 160, 170, 181, 183-184, 190-191, 193, 195, 198-200, 202, 217, 224, 230-231, 236, 243, 254, 268, 274, 280-281, 305, 307, 312-313, 316, 318, 325, 331, 334, 344, 348, 364

Occasional. This is an undescribed species related to *Hybopsis winchelli* (Clemmer 1971; Mettee et al. 1996; Boschung and Mayden 2004).

Lythrurus atrapiculus, Blacktip Shiner (F).

Sites: 41, 54, 111, 196, 201, 203, 212, 228, 242, 258, 264, 268, 269-271, 272, 274, 276, 281, 287, 288, 297, 299, 303, 305, 310-313, 315, 316, 319, 323, 325, 327, 330, 333-334, 337, 341, 343-346, 360, 364, 369, 373

Generally distributed and common in tributaries of Pea, Whitewater, and Choctawhatchee rivers. Common in Alabama, but rare in Florida.

Macrhybopsis n. sp. cf. *aestivalis*, Florida chub (F).

Sites: 37, 163, 164, 197, 199, 274, 276, 277, 286, 301

Sporadic in the Choctawhatchee River in Washington and Holmes counties, Florida, and Coffee County, Alabama. This is an undescribed species related to *Macrhybopsis aestivalis* (Warren et al. 2000).

Notemigonus crysoleucas, Golden Shiner (F).

Sites: 5, 8, 14, 25, 33, 93, 95, 96, 107, 110, 111, 128, 132, 150, 156, 170, 174, 179, 186, 192-193, 198, 201-204, 216, 222, 239, 243, 247, 248, 250, 262, 265, 276, 277, 280, 291-292, 295, 305, 309, 329-330, 345-346, 349, 351, 354, 358-360, 367-370, 372-373

Occasional in tributaries of upper Pea and lower Choctawhatchee rivers.

Notropis amplamala, Longjaw Minnow (F).

Sites: 77, 91, 111, 130, 134, 137, 138, 140, 152, 166, 168, 170, 177, 179, 180-182, 184-185, 192-193, 195, 197-200, 202-203, 212, 214, 223-228, 231, 235, 236, 242-244, 247, 249-250, 253-256, 258, 261-263, 265, 271, 275-277, 278, 280, 283,

287-289, 292-293, 295-297, 299-300, 303, 305, 307-310, 312-313, 316, 318-320, 325-328, 330, 335, 337, 343-346, 348-349, 358-359, 361-362, 364, 368-370, 373

Generally distributed and abundant in tributaries of Pea and lower Choctawhatchee rivers. Sporadic in tributaries of upper Choctawhatchee River. Populations on Gulf Coast previously regarded as disjunct southern form of *Ericymba buccata*, but recently described as a new species by Pera and Armbruster (2006). Genus *Ericymba* has been synonymized with *Notropis* by Coburn and Cavender (1992).

Notropis chalybaeus, Ironcolor Shiner (F).

Sites: 14, 18, 23, 107-108, 130, 133, 136, 142, 154-156, 159-160, 174, 176, 186, 192, 195, 198, 202-203, 211, 217, 221, 315, 321

Occasional in tributaries to Choctawhatchee Bay, Holmes Creek, Florida, and Choctawhatchee River, Henry County, Alabama.

Notropis cummingsae, Dusky Shiner (F).

Site: 142

There is a record based on 25 specimens collected on 14 April 1962 from the Choctawhatchee drainage in Washington County, Florida (UF 57944). Since this is the only record of the species from the drainage, the collection site needs to be revisited to confirm this record.

Notropis harperi, Redeye Chub (F).

Sites: 61, 63, 65, 70, 73, 80, 91, 102, 107-108, 111, 127, 130, 134, 136, 151, 163, 179, 181-182, 185-188, 198-199, 207, 209, 215-216, 224-227, 229, 258, 262, 329, 336, 337, 340-341, 351-352

Sporadic in tributaries of Whitewater and upper Choctawhatchee rivers. New drainage extensions were recorded. Our Geneva County site is the southern-most record of this species in the Choctawhatchee drainage. *Notropis harperi* is always limited to spring habitats.

Notropis n. sp. cf. *longirostris*, Longnose Shiner (F).

Sites: 37, 39-40, 48, 120, 152, 157, 163-165, 168, 170, 180-181, 190, 193, 195, 197-203, 206, 212, 214, 224-225, 233, 235, 240, 242-243, 245, 247, 250, 254, 256, 258, 261, 264-265, 271, 274, 276-277, 280, 283, 287, 289, 292-297, 299-304, 307, 310-320, 322-327, 337, 340, 345

Generally distributed and common in tributaries of Pea and Whitewater rivers. Occasional in lower Choctawhatchee river tributaries. This represents an undescribed species related to *Notropis longirostris* (C.R. Gilbert, unpublished data), which is based entirely on genetic evidence, there appear to be no other characters that can distinguish the two forms.

Notropis maculatus, Taillight Shiner (F).

Sites: 11, 12, 14, 18, 33, 107, 132, 144, 149, 155-156, 171, 174, 193, 195, 202, 210, 248, 250, 271, 276, 295, 301, 312, 362

Sporadic in tributaries of upper Pea and lower Choctawhatchee rivers. Occasional in Whitewater River tributaries.

Notropis petersoni, Coastal Shiner (F).

Sites: 18, 33, 44, 62, 65, 74, 75, 96, 105, 198

Sporadic in direct tributaries of Choctawhatchee Bay in Florida.

Notropis texanus, Weed Shiner (F).

Sites: 1, 5, 11, 14, 18-19, 21, 23, 38-39, 41, 47-48, 51, 57, 62, 81, 96, 108, 110-111, 114, 124, 129, 130, 131, 134-136, 138, 140, 142, 145, 149, 152, 157, 163, 165, 168, 170, 177, 179-182, 184, 186-188, 190-193, 195, 199-202, 211-212, 217, 221, 228, 231, 239-240, 242-245, 249, 253, 255-256, 258, 262, 264, 268-271, 274, 280-281, 283, 285, 287, 289, 291-293, 295-297, 299-300, 302, 305, 307, 309, 312-313, 316, 318, 320, 323, 325, 327, 330-332, 337, 341, 346-348, 355, 357, 359, 364

Generally distributed and common in tributaries of Pea, Whitewater, and Choctawhatchee rivers.

Opsopoeodus emiliae, Pugnose Minnow (F).

Sites: 5, 11, 14, 18, 107, 140, 149, 195, 198, 202-203, 242, 245, 263, 276, 293, 312, 324-326, 328, 341

Occasional in tributaries of Pea and lower Choctawhatchee rivers. Previously known from only a few sites in the Choctawhatchee drainage in Alabama (Mettee et al. 1996; Boschung and Mayden 2004). During our survey, we found the species at an additional 15 tributary sites, as well as the mainstem Pea River.

Pteronotropis hypselopterus, Sailfin Shiner (F).

Sites: 23, 32, 48, 52, 54, 61, 63, 69, 77, 85, 91, 100, 113, 121, 127, 130, 134, 136, 138, 160, 180, 184, 186, 187, 201, 202, 212, 217, 219, 221, 223-224, 227, 228, 233-237, 242-243, 254, 262, 264, 274, 278, 280, 285, 287, 305, 364

Generally distributed and common in lower Choctawhatchee River, Holmes Creek, Florida; middle Choctawhatchee River, and tributary to Double Bridges Creek, Alabama.

Pteronotropis merlini, Orangetail Shiner (F).

Sites: 81, 245, 248-249, 255-256, 263, 265, 271, 275, 281, 283, 293, 296, 303-304, 308-309, 311-312, 315-320, 327-330, 334, 342, 345-346, 352, 355-357, 361-362, 370, 373

Generally distributed and common in tributaries of Pea, Whitewater, and lower Choctawhatchee rivers. Almost entirely confined to Alabama.

Pteronotropis signipinnis, Flagfin Shiner (F).

Sites: 46, 57, 68, 72, 77, 81, 83-84, 113, 115, 117, 130, 141, 169, 215, 255, 279, 306, 336

Occasional in Walton, Washington, and Holmes counties, Florida; Geneva, Dale, and Barbour counties, Alabama.

Pteronotropis welaka, Bluenose Shiner (F).

Sites: 12, 14, 160, 210-211

Sporadic in Walton, Holmes, and Jackson counties, Florida.

Semotilus thoreauianus, Dixie Chub (F).

Sites: 96, 98, 111, 136, 166, 177, 242, 256, 259, 262, 273, 275, 278, 280, 283, 292, 295, 296, 297, 299, 308-309, 312, 349, 352, 360

Sporadic in tributaries of Pea River. Occasional in the lower Choctawhatchee River tributaries.

Catostomidae

Carpoides n. sp. cf. *cyprinus*, Quillback Complex (F).

Sites: 28, 152, 162, 164, 170, 193, 199, 230, 231, 240

Sporadic in lower Choctawhatchee Bay tributaries, Holmes Creek, and Choctawhatchee River. H. Bart (unpublished data) considers Quillbacks a species complex with the Choctawhatchee drainage form as an undescribed species.

Carpoides n. sp. cf. *velifer*, Highfin Carpsucker Complex (F).

Sites: 12, 14, 35-36, 38, 152, 164, 167, 170-171, 193, 197, 199-200, 231, 232, 277

Occasional in tributaries of Choctawhatchee Bay and mainstem Choctawhatchee River, Holmes and Walton Counties, Florida, and Geneva County, Alabama. H. Bart (unpublished data) considers Highfin Carpsuckers a species complex with the Choctawhatchee drainage form representing an undescribed species.

Erimyzon suetta, Lake Chubsucker (F).

Sites: 3, 26, 29, 33-34, 53, 61, 72, 74, 76-77, 83, 96-97, 100-101, 107, 109, 112-113, 121-122, 128, 132-133, 150-151, 155-156, 160, 174-175, 179, 184, 186, 189, 193, 201, 216, 226, 229, 238-239, 247-248, 255, 260, 265, 269, 271, 282, 284, 291, 295-296, 304, 320, 346, 355, 358, 360, 367, 372

Occasional in tributaries of upper Pea, lower Choctawhatchee, and Whitewater rivers.

Minytrema melanops, Spotted Sucker (F).

Sites: 12, 14, 16, 32, 36, 41, 47, 74-75, 85, 96, 105, 107, 134, 159-160, 162, 167, 170, 177, 179, 181, 183-184, 192-193, 195, 198, 201-203, 232, 242-243, 253, 276, 281-282, 300, 305, 312, 325-326, 328, 348, 357

Occasional in tributaries of Pea and Choctawhatchee rivers.

Moxostoma poecilurum, Blacktail Redhorse (F).

Sites: 12, 14, 16, 18, 27, 36, 38, 41, 47, 108, 111, 114, 116, 118, 120, 130, 140, 149, 152, 157, 160, 162, 166-167, 170, 179, 181, 183-184, 190-191, 193, 197-199, 201-203, 230, 231-232, 240, 243-245, 253, 268-269, 274, 276, 280-281, 286, 293, 296, 300, 305, 307, 312-313, 323, 325-326, 343, 346, 348

Occasional in tributaries of Pea and lower Choctawhatchee rivers.

Ictaluridae

Ameiurus catus, White Catfish (I, F).

Sites: 5, 18

Sporadic in tributaries of Choctawhatchee Bay.

Ameiurus melas, Black Bullhead (I, F).

Site: 246

Sporadic in tributaries of upper Choctawhatchee River. This species may be introduced since it has never been recorded from Florida portions of the drainage.

Ameiurus natalis, Yellow Bullhead (F).

Sites: 1, 25-26, 29, 48, 60-61, 63, 65, 72, 74, 76-77, 96-97, 99-100, 112, 115, 117, 133, 141, 161, 192, 216, 221, 239, 248, 263, 267, 271, 283, 291, 293, 296, 304, 324, 326, 330, 336, 342, 345, 355, 357, 368, 370, 372-373

Generally distributed and common in tributaries of Pea, Whitewater, and lower Choctawhatchee rivers.

Ameiurus nebulosus, Brown Bullhead (I, F).

Sites: 146, 156, 174, 252, 260, 300, 366-367

Sporadic in tributaries of upper Pea and lower Choctawhatchee rivers. Although there are numerous scattered records from Gulf Coast drainages west of the Apalachicola River drainage, we believe these are introductions.

Ictalurus punctatus, Channel Catfish (F).

Sites: 5, 37, 145, 193, 198-200, 231, 239, 250, 276

Sporadic in tributaries of lower Choctawhatchee River.

Noturus funebris, Black Madtom (F).

Sites: 52, 63, 65-66, 68, 74, 96-97, 115, 117, 121, 126, 129, 141, 187, 225, 244, 256, 267, 365

Sporadic in tributaries of lower Choctawhatchee River.

Noturus gyrinus, Tadpole Madtom (F).

Sites: 5, 8, 18, 29, 60, 93, 96, 100, 115, 121, 125, 128, 133, 140, 143, 155, 172, 187, 201, 207 220-221

Sporadic in tributaries of lower Choctawhatchee River.

Noturus leptacanthus, Speckled Madtom (F).

Sites: 23, 47-48, 50-53, 56, 60-63, 65, 67-71, 74-75, 77, 79-80, 82, 84-85, 90, 96, 103-105, 110-111, 115, 122, 124, 126, 129-130, 141, 148, 160, 166, 177, 181, 183-184, 186-187, 193, 196-197, 199, 201-203, 206, 214, 216, 218-219, 221, 225, 227-229, 231, 236, 240, 245, 249, 253, 256, 264, 268-269, 271, 273-274, 276, 283, 287, 289-290, 292-293, 296-297, 299, 300, 303, 305, 312, 316, 318-319, 322, 324, 326, 327, 329, 334, 344, 348-349, 352, 355, 357, 364-365, 373

Generally in tributaries of Pea, Whitewater, and Choctawhatchee rivers.

Ariidae

Ariopsis felis, Hardhead Catfish (M).

Site: 28

Sporadic in Jolly Bay, Walton County, Florida.

Bagre marinus, Gafftopsail Catfish (M).

Sites: 13, 28

Sporadic in Choctawhatchee and Jolly bays, Walton County, Florida.

Esocidae

Esox americanus, Redfin Pickerel (F).

Sites: 47-48, 62, 72-76, 84, 93, 96-97, 100, 106-110, 112, 127-130, 132-133, 140, 142, 144, 146-147, 150-151, 155-156, 161, 164, 173-175, 178-182, 185-186, 189, 192, 195, 201-202, 204-211, 216-218, 221-222, 226-227, 234, 238-239, 243-245, 247-249, 253-256, 270-271, 276-277, 279-280, 283-285, 293, 296, 299, 301, 304, 308-309, 313, 315, 318, 320, 328-330, 333-334, 339, 341-342, 344-346, 351, 353-354, 356, 362, 364, 366, 368, 371-373

Generally distributed in tributaries of Pea, Whitewater, and Choctawhatchee rivers.

Esox niger, Chain Pickerel (F).

Sites: 12, 14, 22, 25, 36, 48, 74, 113, 150, 158, 167, 174, 193, 195, 208, 212, 222, 225, 260, 277, 321, 348

Occasional in tributaries of Choctawhatchee Bay, Choctawhatchee and Pea rivers.

Aphredoderidae

Aphredoderus sayanus, Pirate Perch (F).

Sites: 5, 12, 14, 18, 22, 25-26, 29, 33, 34, 38, 48, 50, 52, 61, 63, 65, 74, 76, 80, 82, 84-85, 87, 91, 93, 96-97, 100, 111, 132-133, 136, 140, 149-151, 159, 161, 174, 181-182, 186, 188-189, 192-193, 195-198, 201, 203-207, 209, 215, 217-222, 224-227, 231, 234-236, 239, 244-245, 248, 253, 256, 258, 263, 265, 267, 270-272, 275, 283, 293, 295, 300-301, 304, 312, 315-316, 320, 328, 330, 336-337, 341, 345-346, 351-352, 355, 357, 361, 373

Generally distributed in tributaries of Pea, Whitewater, and Choctawhatchee rivers.

Mugilidae

Mugil cephalus, Striped Mullet (F/M).

Sites: 7, 14, 16, 29, 43, 240

Sporadic in tributaries of Choctawhatchee Bay, Okaloosa, and Walton counties, Florida.

Mugil curema, White Mullet (M).

Sites: 30, 45

Rare in Choctawhatchee Bay, Walton County, Florida.

Atherinopsidae

Labidesthes sicculus vanhyningi, Gulf Brook Silverside (F).

Sites: 5, 8, 11-12, 14, 18, 29, 33, 36, 38-40, 44, 74, 81, 93, 106-109, 113, 121, 124, 128, 130-133, 138, 140, 144, 149, 150, 154-157, 172, 174, 179-181, 186, 190, 193, 195, 198, 202-203, 208, 210-212, 214, 222, 226, 247, 250, 276, 323, 325, 340, 346.

Occasional in tributaries of the lower Choctawhatchee Bay and upper Pea River. Recent unpublished data suggests that this subspecies warrants elevation to species (Bean and Reid 1930; Bloom et al. 2009).

Menidia beryllina, Inland Silverside (F/M)

Sites: 7, 41, 51

Sporadic in tributaries of Choctawhatchee Bay.

Belonidae

Strongylura marina, Atlantic Needlefish (F/M).

Sites: 7, 13, 30, 160, 170, 193, 230

Sporadic in Choctawhatchee Bay, Walton and Holmes counties, Florida, occurring upstream to Geneva County, Alabama.

Fundulidae

Adinia xenica, Diamond Killifish (F/M).

Rare, known from a single bayou of Choctawhatchee Bay, Walton County, Florida.

Fundulus chrysotus, Golden Topminnow (F).

Sites: 34, 74, 107, 125, 144, 154, 156

Sporadic in tributaries of Walton and Washington counties, Florida.

Fundulus cingulatus, Banded Topminnow (F).

Sites: 3, 61, 72, 121, 144, 146, 150, 144, 186

Sporadic in tributaries in Walton, Okaloosa, Washington, and Holmes counties, Florida. Formerly known as *Fundulus auroguttatus*, but this is now considered a junior synonym due to designation of the lectotype of *F. auroguttatus* as neotype of *F. cingulatus* (Lazara and McEachran 2002).

Fundulus confluentus, Marsh Killifish (F/M).

Site: 14

Rare in Choctawhatchee Bay. This listing includes the nominal *Fundulus pulvereus*, which is often recognized as a distinct species. The apparent widespread intermediacy of that form with *F. confluentus* along the western panhandle of Florida suggests that these forms are conspecific (Hardy 1980, Relyea 1983; Boschung and Mayden 2004).

Fundulus escambiae, Russetfin Topminnow (F).

Sites: 23, 26, 34, 53, 59, 62, 64, 72, 74, 76-77, 81, 93, 106-107, 109-110, 112-113, 121, 125, 127-128, 131-133, 142-144, 150-151, 155-156, 158, 160, 166, 169, 172-174, 179-181, 185-187, 189, 195, 198, 203, 207, 208-211, 217, 220, 222, 276, 286, 301.

Occasional in tributaries of Holmes, Walton, and Jackson counties, Florida.

Fundulus grandis, Gulf Killifish (F/M).

Sites: 49

Rare, collected only in Black Creek, Walton County, Florida.

Fundulus olivaceus, Blackspotted Topminnow (F).

Sites: 19, 21, 23, 31, 62, 91, 96, 101, 108, 120, 130-131, 134, 136, 140, 166, 177, 179-181, 184-185, 190-193, 195, 198, 201-203, 206, 212, 216-217, 224, 226-229, 233-236, 242, 244-245, 248, 250, 253, 258, 261, 263, 265, 268, 271-272, 274, 277-281, 285, 288-289, 293-294, 296, 299-300, 303, 307-309, 311-312, 315-316, 318, 322, 324-326, 328-330, 333-334, 337, 340, 341, 343-347, 349, 351, 356-357, 359, 361-362, 364, 368-371, 373.

Generally distributed and common in tributaries of Pea, Whitewater, and Choctawhatchee rivers.

Fundulus similis, Longnose Killifish (M).

Sites: 49

Rare, found only in Black Creek, Walton County, Florida.

Leptolucania ommata, Pygmy Killifish (F).

Sites: 3, 22, 59, 125, 133, 144, 150, 156, 161

Sporadic in tributaries of Choctawhatchee Bay in Washington, Holmes, and Walton counties, Florida.

Lucania goodei, Bluefin Killifish (F).

Sites: 14, 96

Rare, found at a few spring sites adjacent to Choctawhatchee River, Walton County, Florida.

Lucania parva, Rainwater Killifish (F/M).

Sites: 29, 45, 74

Rare found only in Jolly Bay, Walton County, Florida.

Poeciliidae

Gambusia holbrookii, Eastern Mosquitofish (F/M).

Sites: 1-4, 14, 21, 23, 26, 29-30, 34, 40, 44-45, 48, 50-54, 56-57, 59-63, 65, 69, 72, 73-77, 79-81, 83, 85, 87, 90-91, 93, 95-97, 100, 105-113, 121-122, 124-130, 132-134, 136, 140, 142-144, 147, 150, 156-158, 160, 161, 166, 169-170, 172-173, 179-187, 189, 192, 195, 198, 200-202, 205, 208-211, 217, 220-221, 224, 234-235, 238-240, 245, 247-248, 251, 254-255, 257, 262, 265, 270, 277, 280-281, 283, 287, 291, 293, 296-298, 304-306, 309, 312, 314, 316, 320, 323, 328-329, 333-334, 336, 342, 344, 349, 352, 355-357, 362, 367-370.

Generally distributed in tributaries of Pea, Whitewater, and Choctawhatchee rivers.

Heterandria formosa, Least Killifish (F).

Sites: 14, 34, 60

Sporadic in Choctawhatchee Bay tributaries, Walton County, Florida. There appears to be only a single record from the Choctawhatchee River drainage in Geneva County, Alabama. The species is sporadic in lower parts of the drainage in Walton County, Florida.

Poecilia latipinna, Sailfin Molly (F/M).

Sites: 30, 45, 51, 74, 154

Rare in Choctawhatchee Bay, Walton County, Florida.

Cyprinodontidae

Cyprinodon variegatus, Sheepshead Minnow (F/M).

Sites: 51, 74, 150

Rare in Holmes County, Florida.

Syngnathidae

Syngnathus louisianae, Chain Pipefish (M).

Site: 7

Rare in Choctawhatchee Bay, Okaloosa County, Florida.

Syngnathus scovelli, Gulf Pipefish (F/M).

Sites: 7, 25, 51

Sporadic in Choctawhatchee Bay, Okaloosa and Walton counties, Florida.

Moronidae

Morone saxatilis, Striped Bass (F/M). Sporadic in Choctawhatchee Bay.

Morone saxatilis × *M. chrysops*, Sunshine Bass (Striped Bass hybrid) (I, F).

Hybrids between White Bass (*Morone chrysops*), which is not native to Florida, and Striped Bass (*Morone saxatilis*) are widely propagated and stocked in Florida and elsewhere. Since these are frequently caught by fishermen, we list this hybrid cross.

Centrarchidae

Ambloplites ariommus, Shadow Bass (F).

Sites: 38, 50, 54, 57, 61-63, 65, 69, 74, 77, 103, 120, 138, 141, 166-167, 183, 203, 225, 230-231, 263, 310, 324

Occasional in tributaries of Pea River. Shadow Bass records confirm those from Mettee et al. (1996) and Boschung and Mayden (2004), which were primarily from the Choctawhatchee and the extreme lower portions of the Pea River.

Centrarchus macropterus, Flier (F).

Sites: 78, 87, 96-97, 100-101, 109-110, 112, 132, 141, 146, 150, 156, 174, 192, 201, 203-205, 209, 216, 222, 224, 236, 238, 248, 368, 372

Occasional in tributaries of lower Choctawhatchee River.

Elassoma evergladei, Everglades Pygmy Sunfish (F).

Sites: 3, 22, 59, 61-62, 72, 76, 89, 93, 97, 109, 112, 124-125, 128, 133, 142, 146, 156, 158, 161, 174, 207, 216, 321

Occasional in Washington, Walton, Okaloosa, and Holmes counties, Florida.

Elassoma gilberti, Gulf Coast Pygmy Sunfish (F).

Sites: 34, 53, 57, 74, 93, 121, 128, 132, 134, 139, 174, 207, 209-210, 220

Occasional in Walton, Washington, Holmes, and Jackson counties, Florida. Populations west of the Waccasassa River drainage represent the new species, which is characterized by the consistent presence of 4-4 preopercular pores (3-3 in *E. okefenokee* to the east) (Snelson et al. 2009). Both species occur allopatrically in the Suwannee drainage.

Elassoma zonatum, Banded Pygmy Sunfish (F).

Sites: 3, 8, 26, 29, 34, 48, 59, 62, 72, 87, 91, 93, 96-97, 100, 107, 110-111, 124, 129, 132-134, 140, 144, 151, 154, 156, 173, 182-184, 186-187, 195, 202-205, 207, 209-210, 216, 219-222, 227, 234, 236, 238, 247, 266, 276, 284, 315, 320-321, 336, 340, 353, 355

Occasional in headwater streams in lower Choctawhatchee River and Choctawhatchee Bay. Sporadic in upper Choctawhatchee River.

Enneacanthus gloriosus, Bluespotted Sunfish (F).

Sites: 8, 14, 22, 33-34, 87, 106, 132, 144, 151, 155-156, 159, 164

Sporadic in Walton, Washington, and Holmes counties, Florida.

Enneacanthus obesus, Banded Sunfish (F).

Sites: 112, 125, 128, 132-133, 158, 161, 174-175, 186

Rare, found at two sites in Choctawhatchee Bay tributaries, Washington and Holmes counties, Florida.

Lepomis auritus, Redbreast Sunfish (I, F).

Sites: 36, 107, 108, 120, 138, 230, 240, 372-373

Sporadic in Choctawhatchee River, Holmes Creek, Florida, and upper Pea River, Alabama.

Lepomis cyanellus, Green Sunfish (I, F).

Sites: 248, 253, 263, 270-271, 291, 295, 304, 313-314, 323, 345, 354, 360, 362, 364, 366, 368, 373

Occasional in tributaries of Pea and lower Choctawhatchee rivers.

Lepomis gulosus, Warmouth (F).

Sites: 5, 12, 14, 18, 26, 29, 33-34, 38, 50, 62, 64, 72, 75, 87, 97, 106-107, 109-110, 121, 128, 132, 140, 150, 155-156, 159, 167, 169, 174, 192-193, 198, 209, 216, 218, 226-227, 239, 244, 247, 248, 249, 253, 260, 265, 271, 282-284, 291, 293, 296, 303, 309, 322, 325, 328-330, 332, 333, 341-342, 344, 346, 356, 358, 360-362, 367-368, 372

Generally distributed and occasional in tributaries of Pea, Whitewater, and Choctawhatchee rivers.

Lepomis macrochirus, Bluegill (F).

Sites: 5, 12, 14, 18, 28-29, 33-34, 36, 38, 41, 47, 50, 74, 96, 107-108, 110, 120, 124, 127-128, 130, 132, 134, 136, 138, 142-144, 147, 150, 154-155, 157, 160, 162, 167, 169, 172-174, 177, 179-182, 186, 192-193, 195, 198, 200-204, 209, 216-217, 222, 224, 227, 230-231, 239-240, 248-251, 253, 256, 258, 260,

265, 271, 277, 282, 287, 291, 293, 295-296, 300, 304, 312-314, 316, 318, 322, 324-331, 340-346, 349, 351, 353, 356, 359-360, 362, 367-369

Generally distributed and abundant in tributaries of the Pea, Whitewater, and Choctawhatchee rivers.

Lepomis marginatus, Dollar Sunfish (F).

Sites: 1, 4, 26, 34, 47, 50, 63, 65, 72, 76, 87, 93, 96, 100, 106-107, 109-113, 125, 128, 130, 132-134, 145, 149, 151, 154, 156, 158, 169, 173, 174, 180, 186-187, 189, 193, 195, 198, 200-202, 207, 216-218, 242-244, 248, 255, 258, 276, 287, 299, 303, 319, 324, 348

Sporadic in tributaries of Pea and Whitewater rivers. Occasional in tributaries of the lower Choctawhatchee River.

Lepomis megalotis, Longear Sunfish (F).

Sites: 12, 36, 38, 40-41, 107-108, 120, 130, 134, 136, 152, 157, 179-181, 184, 192-193, 195, 197-199, 201-203, 206, 209, 217, 221, 225, 229-231, 239, 242, 244-245, 248-250, 253, 258, 263, 268, 270-271, 276, 280-282, 287, 291, 293, 295-296, 300-301, 305, 307, 309-310, 312-313, 316, 318-319, 321-326, 328, 334, 341, 343, 345-347, 353, 356-357, 359-361, 364, 370

Generally distributed and common in tributaries of Pea, Whitewater, and Choctawhatchee rivers. This species comprises several distinct and geographically allopatric morphotypes, which presumably represent different species or subspecies (Page and Burr 1991). The proper name for the Gulf Coast population in Florida and southeastern Alabama has yet to be determined.

Lepomis microlophus, Redear Sunfish (F).

Sites: 5, 12, 14, 18, 29, 33-34, 36, 144, 155-156, 179, 181, 193, 195, 198-199, 225, 230, 239, 250, 253, 260, 287, 305, 314, 318, 325, 346

Occasional in tributaries of lower Pea and lower Choctawhatchee rivers. Species historically divided into two distinct and probably allopatric forms, which were separable by complete or nearly complete breaks in three meristic features including: lateral line scale counts (40-47 in eastern form, 34-39 in western form); cheek scale rows (5 or 6 in Eastern form; 3 or 4 in western form); and caudal peduncle scale rows (19-22 in eastern form, 16-19 in western form). These data were from a relatively limited sampled ($N = 79$ from eastern form; only $N = 24$ from western form) from Bailey's (1938) unpublished doctoral dissertation. The name *microlophus* applies to the eastern form, while no name is available for the western form. The original geographic break between the two forms is uncertain. Bailey placed the break between the Mobile Bay basin and drainages to the west; however, more likely the break is between the Apalachicola basin and drainages to the west. Although numerous introductions have probably clouded the issue, it is possible that the populations originally came together and interacted in the same way as *Lepomis punctatus* and *L. miniatus*. Based on these uncertainties, the form and status of the Choctawhatchee population is not clear.

Lepomis miniatus × *L. punctatus*, Redspotted × Spotted Sunfish (F).

Sites: 12, 14, 18, 30, 33-34, 48, 50, 52, 54, 61-63, 69, 72, 77, 83, 100, 108, 127, 130, 134, 136, 147, 150, 155, 157, 159-160, 166, 180, 186, 192, 195, 201, 208-210, 221, 230, 236, 239, 244-245, 247-251, 255-256, 258, 263, 265, 268, 271, 281-282, 291-293, 295-296, 303-305, 309, 313, 319, 322, 324-326, 328, 330, 332, 334, 341, 344-345, 349, 351, 353, 355-361, 363-364, 366, 372

Generally distributed in tributaries of Pea, Whitewater, and Choctawhatchee rivers. Occasional in Florida tributaries in Walton, Okaloosa, Washington, and Holmes counties, and Geneva, Henry, Dale, and Pike counties Alabama. Populations of Spotted Sunfish west of the Apalachicola River are intermediate between *Lepomis punctatus* and *Lepomis miniatus*. Current practice is to consider these populations as hybrids (Warren 1992). Others consider *L. miniatus* to be a subspecies of *L. punctatus*, with populations in the Florida panhandle populations to be secondary intergrades (Gilbert 1992). Warren (1992) considers populations from the study area to be a part of a broad hybrid zone.

Micropterus punctulatus, Spotted Bass (F).

Sites: 36, 38, 114, 120, 134, 136, 138, 140, 150, 166, 179, 181, 193, 197-200, 206, 231-232, 236, 239, 250, 254, 271, 276, 285, 296, 301, 310, 312, 323, 341, 348

Sporadic or occasional in tributaries of Choctawhatchee and Whitewater rivers. It is uncertain whether populations in coastal drainages between the Apalachicola River and Mobile Bay basin are introduced or native (Swift et al. 1986) or if they represent an undescribed species (e.g., Choctaw Bass). If native, it would have entered the Choctawhatchee drainage from stream transfer with the Mobile Basin and should be referable as *M. henshalli*. Based on Baker et al.'s (2008) reported meristic data for populations included in the original analysis from the Choctawhatchee and Escambia drainages, they recognized that the species in the Choctawhatchee drainage is *M. punctulatus*; thus, without further DNA analysis evidence points toward introduction.

Micropterus salmoides, Largemouth Bass (F).

Sites: 5, 12, 14, 18, 25, 29, 30, 33, 34, 36, 41, 47-48, 50, 53, 58, 60, 62-63, 74-75, 82, 96, 107, 110, 112, 114, 120, 124, 129, 132, 134, 147, 151-152, 156-158, 160, 165, 168, 181, 186, 192-193, 195, 198, 203, 209, 215-216, 222, 230, 244, 260, 270, 276, 281-282, 284-285, 287, 291, 295, 296, 299, 310, 314, 325-326, 328, 343-345, 360-361

Occasional in tributaries of Pea and lower Choctawhatchee rivers. There is recently published genetic evidence to suggest that the peninsular Florida population of Largemouth Bass (currently *Micropterus salmoides floridanus*) should be considered a distinct species (Kassler et al. 2002). The population in the Florida panhandle intergrades between the Florida Bass and the Largemouth Bass. The situation is complicated by the numerous introductions of *M. s. floridanus* into areas populated by *Micropterus s. salmoides*.

Pomoxis annularis, White Crappie (I, F).

Sites: 150, 167, 231, 260

Sporadic in Choctawhatchee River, Holmes County, Florida and Dead River, Geneva County, Alabama.

Pomoxis nigromaculatus, Black Crappie (F).

Sites: 5, 18, 29, 33, 34, 114, 157, 193, 198, 203, 230, 232, 305, 331, 372

Generally distributed but rare throughout the drainage; consequently, few specimens have been collected.

Percidae

Ammocrypta bifascia, Florida Sand Darter (F).

Sites: 37, 135, 152, 170, 179, 181, 193-195, 197-200, 203, 212, 233, 240, 246, 261, 274, 276-277, 301-302, 307, 310, 312, 340

Occasional in the mainstem Choctawhatchee River, Holmes County, Florida and Geneva, Houston, and Dale counties, Alabama (Williams 1975).

Etheostoma colorosum, Coastal Darter (F).

Sites: 134, 136, 140, 142, 180-181, 183-185, 198, 203, 218, 226-227, 229, 233, 236, 242-243, 253-254, 268, 316, 325, 329, 337, 340, 351-352, 355-356

Sporadic in tributaries of the Pea River. Reported from the headwaters of the Pea, Double Bridges Creek, Choctawhatchee, and Little Choctawhatchee Rivers (Suttkus and Bailey 1993).

Etheostoma davisoni, Choctawhatchee Darter (F).

Sites: 11, 18, 23, 38, 41, 91, 111, 136, 149, 157, 160, 170, 183-184, 193, 195, 197-199, 202-203, 218, 222, 224-225, 227, 229, 233, 235, 237, 250, 268-270, 272, 276, 280, 289, 293, 297, 309-310, 312, 316, 320, 329-331, 334, 337, 340, 342-344, 349, 345-347, 359, 364

Occasional in upper Pea River tributaries. Sporadic in tributaries of lower Pea and Choctawhatchee rivers.

Etheostoma edwini, Brown Darter (F).

Sites: 1, 5, 23, 52-53, 56, 62, 64, 66, 70, 72, 77, 80, 84, 103, 110-111, 127, 134, 136, 140, 160, 179-184, 186-187, 192, 198, 201-203, 207-210, 216-219, 221-222, 224, 226-228, 235, 237, 241, 243, 255, 268, 270, 278, 280, 293, 301, 308, 310, 329, 336, 340, 349, 351-352, 355, 357, 361

Occasional in tributaries of upper Pea and Choctawhatchee rivers.

Etheostoma fusiforme barratti, Scalyhead Darter (F).

Sites: 8, 18, 29, 33-34, 62, 96, 110, 112, 123-124, 143-144, 146, 150-151, 155, 158, 160, 172, 220

Sporadic in tributaries of Choctawhatchee Bay, Walton, Jackson, and Holmes counties, Florida. Southern populations now referred to the subspecies *barratti* warrant reevaluation using DNA data.

Etheostoma okaloosae, Okaloosa Darter (F).

Sites: 61, 63, 65, 69, 74, 79, 85

Sporadic in tributaries of Choctawhatchee Bay, Okaloosa County, Florida. Limited to independent creek tributaries to Choctawhatchee Bay in Florida. Does not occur in the Choctawhatchee River drainage proper.

Etheostoma parvipinne, Goldstripe Darter (F).

Sites: 96, 225, 259, 266, 314, 360, 363

Sporadic in tributaries of Upper Pea River. Reported from Whitewater, Limestone, and Barnes creeks (Mettee et al. 1996).

Etheostoma proeliare, Cypress Darter (F).

Sites: 40, 107, 195

Sporadic in Choctawhatchee River, Walton and Holmes counties, Florida. All records from the Choctawhatchee drainage are from Florida where the species is extremely rare.

Etheostoma swaini, Gulf Darter (F).

Sites: 37, 40, 91, 103, 136, 145, 154, 160, 163-164, 170, 181, 184, 186-187, 193, 195, 197-198, 202-203, 210, 215-216, 220-221, 224, 233, 245, 253, 263, 276, 301, 312, 314, 322, 324, 328, 331, 336-337, 340, 345-346, 349, 351-352, 355-357, 361, 364

Occasional in tributaries of upper and lower Pea River and in tributaries of upper Choctawhatchee River.

Perca flavescens, Yellow Perch (I, F).

Since *Perca flavescens* is native to the Apalachicola River drainage and also to the Mobile Bay basin, the species was possibly native to intervening drainages; however, since there is only one record throughout these drainages (the Choctawhatchee drainage in Alabama), this raises the question of whether this one collection was based on an introduction or is a natural relict population (Swift et al. 1986).

Percina austroperca, Southern Logperch (F).

Sites: 18, 25, 41, 114, 149, 163, 170, 181, 195, 198-199

Sporadic in Choctawhatchee River, Walton, Washington, and Holmes counties, Florida.

Percina nigrofasciata, Blackbanded Darter (F).

Sites: 1, 2, 11, 21, 23, 38, 47-48, 50, 52, 56-57, 60-63, 65-67, 70-71, 74-75, 79, 84-86, 88, 90, 92, 104-105, 108, 111, 113, 115, 121-122, 124, 126-127, 129-130, 134, 136, 138, 140-141, 145, 149, 163, 169, 171, 177, 179-181, 183-187, 190, 192-193, 195, 198-200, 202, 212, 223-224, 227-228, 235, 239, 242-245, 249, 253-256, 258, 261-265, 268, 274, 277-278, 280-281, 285, 287, 289, 292-293, 296-297, 299, 305, 307, 309, 312-313, 318-320, 322, 326-331, 337, 345-346, 351, 355, 359, 364, 366

Generally distributed in tributaries of Pea, Whitewater, and lower Choctawhatchee rivers.

Carangidae

Chloroscombrus chrysurus, Atlantic Bumper (M).

Site: 55

Rare, known only from the Freeport channel marker, Walton County, Florida.

Gerreidae

Eucinostomus harengulus, Tidewater Mojarra (F/M).

Site: 11

Rare, found only in the Choctawhatchee River at the bunker, Walton County, Florida.

Sparidae

Lagodon rhomboides, Pinfish (M).

Site: 51

Rare, known only from Mullet Creek, Walton County, Florida.

Sciaenidae

Cynoscion nebulosus, Spotted Seatrout (M).

Sites: 43, 156

Rare at Rushing Cutoff, Walton County, Florida.

Leiostomus xanthurus, Spot (M).

Sites: 7, 28, 30, 49, 51

Sporadic in Choctawhatchee Bay, Okaloosa and Walton counties, Florida.

Micropogonias undulatus, Atlantic Croaker (M).

Site: 20

Rare in Choctawhatchee Bay, Walton County, Florida.

Sciaenops ocellatus, Red Drum (M).

Site: 20

Rare to occasionally found in Choctawhatchee Bay and Bear Creek, Walton County, Florida.

Eleotridae

Eleotris amblyopsis, Largescaled Spinycheek Sleeper (F/M).

Sites: 49, 51-52, 74-75

Rare, occurring in a tributary of Choctawhatchee Bay, Okaloosa County, Florida. We follow the nomenclature of Pezold and Cage (2002) for this species. *Eleotris pisonis* and *E. abacurus* are names formerly applied to *E. amblyopsis*, but *E. pisonis* is now known to be confined to South America and *E. abacurus* is a junior synonym of *E. amblyopsis* (Pezold and Cage 2002).

Gobiidae

Gobionellus oceanicus, Highfin Goby (M).

Sites: 7, 47

Rare in Choctawhatchee Bay, Okaloosa County, Florida.

Gobiosoma bosc, Naked Goby (F/M).

Sites: 7, 47

Sporadic in Choctawhatchee Bay, Walton County, Florida.

Gobiosoma robustum, Code Goby (M).

Site: 7

Rare in Choctawhatchee Bay, known from Black Creek, Walton County, Florida.

Lophogobius cyprinoides, Crested Goby (F/M).

Site: 7

Rare in Choctawhatchee Bay, Florida.

Microgobius gulosus, Clown Goby (F/M).

Site: 7

Rare to Sporadic in Choctawhatchee Bay, Florida.

Paralichthyidae

Paralichthys albigutta, Gulf Flounder (M).

Site: 7

Sporadic in Choctawhatchee Bay, Okaloosa County, Florida.

Paralichthys lethostigma, Southern Flounder (F/M).

Sites: 14, 24

Sporadic in Choctawhatchee Bay, Walton County, Florida.

Achiridae

Trinectes maculatus, Hogchoker (F/M).

Sites: 18, 25, 29, 37, 40-41, 152, 157, 195, 199-200, 231, 250

Occasional in Choctawhatchee River mainstem sites from Walton, Washington, Holmes counties, Florida, to Geneva County, Alabama. Only juveniles enter fresh water, while adults spawn in marine habitats.
