CHLAMYDIA

I consent to that idea!

Would you like to participate in consensual sex with me tonight?

One day, Sandy & Cliff both felt ready to engage in sexual acts with one another...

did you bring condoms or a dental dam?

No. But I'm clean so don't worry

BANG!

1 week Later...

Ouch!

Sandy begins to have abdominal pains, and notices some swelling within her vagina. It also burned as she urinated.

Sandy quickly went to the E.R. to find out she has chlamydia!

Yes, I have

Sandy, I think you have chlamydia!

Have you had unprotected sex recently?

The doctor told Sandy she had the option to choose between both antibiotics Azithromycin & Doxycycline.

Azithromycin = one dose of antibiotic that Sandy could've taken.

Doxycycline = Sandy took these pills for a week.

Causes

- Be cause Sandy had unprotected sex with Cliff, who had chlamydia!

NOTE: if Sandy was to use a condom or dental dam, the likelihood of her getting chlamydia would have been much less.

Symptoms:

Women	Men
<ul style="list-style-type: none"> Swelling in vagina or around anus much discharge - yellow & smelly 	<ul style="list-style-type: none"> pain w/ urination penile discharge testicle swelling & tenderness

Treatments

- antibiotics, but these vary from person to person

PRACTICE SAFE SEX!!!

MYTHS

* You can't get chlamydia if you've only had sex once.

* You can't catch chlamydia through oral or anal sex.

* You can catch chlamydia from a toilet seat.

* You'd know if your partner has chlamydia.
