Novel biomarkers for risk stratification of Barrett's oesophagus associated neoplastic progression - epithelial HMGB1 expression and stromal lymphocytic phenotype

Figure legend Figure S1

Representative high power field photomicrographs representing (A) strong nuclear and absent cytoplasmic HMGB1 expression in normal oesophageal epithelium, (B) absent nuclear and weak cytoplasmic HMGB1 expression in non-dysplastic BO epithelium, (C) absent nuclear and moderate cytoplasmic HMGB1 expression in OAC, (D) strong nuclear and strong cytoplasmic HMGB1 expression in OAC, (E) weak nuclear p53 in non-dysplastic BO epithelium, (F) strong nuclear and moderate cytoplasmic p53 expression in dysplastic BO epithelium, (G) weak nuclear and absent cytoplasmic RUNX3 expression in dysplastic BO epithelium, (H) ubiquitous HMGB1 expression in stromal lymphocyte populations in dysplastic BO biopsy, (I) CD20 positive lymphocytes, (J) CD8 positive lymphocytes, (K) CD4 positive lymphocytes and (L) FOXP3 positive lymphocytes.
