- The sample provides a good representation of the population. Nonetheless, all results are weighted to control for selection, non-response, and coverage.

Alaska Victimization Survey in Fairbanks

- The questions in the survey are very graphic because they are “behaviorally specific.”
- For example, we ask: “How many of your romantic or sexual partners have ever slapped you?”

 - Avoid defining victims, survivors
 - Attribute blame to the perpetrators

Important Limitations

- Survey only provides a regional average and masks important differences (for example, differences by age or race/ethnicity).
- Survey excluded non-English speaking women, women without phone access, and women not living in a residence (e.g., shelters, hospitals, homeless, prisons). Estimates may be significantly higher among women excluded from the survey.

Important Limitations

- Measured *number of victims*, not *number of victimizations*. The number of victimizations is higher than the number of victims.
- Survey did not measure all forms of intimate partner violence or sexual violence. Estimates are therefore conservative.
- Estimates may also be conservative because of the continuing stigma of reporting intimate partner and sexual violence.

A Special Thank You!

We sincerely thank the women in the City of Fairbanks and the Fairbanks North Star Borough who invested time and effort to participate in this survey.

They re-lived horrendous experiences – experiences no one should be subjected to – to help the rest of us understand the extent of intimate partner and sexual violence in the Fairbanks area. Thank you!
