Douglas, Stephanie Ph.D. and Mrusek, Bettina M. Ph.D., "Under Pressure: Decision Making in Aircraft Maintenance and the Role of Gender" (2020). *National Training Aircraft Symposium (NTAS)*. 56. https://commons.erau.edu/ntas/2020/presentations/56

This Presentation is brought to you for free and open access by the Conferences at Scholarly Commons. It has been accepted for inclusion in National Training Aircraft Symposium (NTAS) by an authorized administrator of Scholarly Commons. For more information, please contact commons@erau.edu.

## Under Pressure: Decision Making in Aircraft Maintenance and the Role of Gender

Dr. Stephanie Douglas and Dr. Bettina Mrusek Embry Riddle Aeronautical University

#### **Background**

- Collaborative research project between two colleges; aeronautics and business.
- Can conclusions be drawn from analyzing the business operational side of aviation maintenance that could positively impact how airworthiness is maintained?

#### Background cont.

- In aircraft maintenance, leaders are under nearconstant pressure to maintain airworthiness.
- Every minute an aircraft cannot fly due to maintenance represents financial waste.
- Decisions are therefore made in a relatively quick fashion. A leader evaluates the situation, identifies a course of action and then communicates this message to a team of technicians.
- However, gender influences regarding leaders' decisions can influence team members' perceptions of those decisions.

#### **The Decision-Making Process**

- For maintenance personnel, fixing a grounded aircraft means making decisions based on cost, time, and safety.
- Given the importance of each of these elements, there is a need to understand the decision-making process of these leaders, as well as the perceptions of the technicians that must carry out the procedures.
- Does gender influence these decisions?
- Are there follower perceptions that could impact how these actions are carried out?

#### Need for Research

- Improved decision-making
- Contribute to the pipeline of women entering and remaining in aircraft maintenance
- Maintenance technician shortage
- Positively impact workforce diversity
- It is evident that the role of decision-making is vital to maintaining airworthiness

#### **Research Goals**

- Maintenance costs average 12-15 percent of an airlines' overall budget
- Currently, there is no clear behavioral interview process focused on aviation maintenance technicians to ensure they can successfully operate in a high-reliability organization (HRO).
- Armed with this knowledge, hiring personnel as well as leaders within the aviation maintenance environment will be better positioned to handle high-pressure scenarios.

#### **Areas of Focus**

- Role of human factors in aviation maintenance decision making with regard to time, cost, and safety
- Influence of occupational stressors and pressure
- The concept of personenvironment fit (P-E fit)
- Quality decision making Cognitive Dissonance Theory (Festinger, 1957), the Theory of Elimination by Aspect (Tversky, 1972)
- Scenario planning actual workplace challenges

# Research Approach – currently underway

- Meet with industry experts to create scenarios
- The vetted and validated scenarios will be built into a behavioral interview and scoring mechanism created.
- Instrument testing and data gathering/analysis
- The behavioral interview instrument will be monetized and studied longitudinally across time and multiple organizations as a point of research and will be updated as necessary

## QUESTIONS?
