ABSTRACT

The agricultural production in the district of Lapung Middle extremely abundant, Many people are able to use modern technology but lack marketing medium used as a place to promote agricultural products in the local area, making it less increase perekonian society, especially in the marketing of agricultural commodities that are in the area of Lampung middle , Many from outside the community are less aware of his special agricultural excellence in Central Lampung regency. For that one of the things that can be done to take advantage of a variety of facilities and services android is designing an application that can be used by the public, especially farmers in accessing information about the commodities, in this information system design using SDLC, made an android application which is biased
