Abstract

Poverty is social gap problem for some people with below average income level but in Pringsewu district the poverty rate is significantly decreased so it is expected to increase the potential of Pringsewu region to be better, in increasing the potential of the region it needs a system that is expected to assist in determination of poverty level in sub district in Pringsewu by data clustering and ranking from every subdistrict in Pringsewu Regency using SAW method. Therefore, we are interested to build an application of Poverty Grouping in Pringsewu region in the form of Poverty Index of the last few years, existing data is expected to be a reference to increase the potential of the area by reducing the poverty rate every year. It is expected that the data obtained can be a reference of the government in reducing poverty level in subdistricts in Pringsewu District.

Keywords: Decision Support System; Poverty; Simple Additive Weighting; Criteria.

1. Introduction

1.1. Background

Pringsewu District is the smallest district located in Lampung province and its capital is Bandar Lampung, Pringsewu district is bordering with Tanggamus Regency. This district has been ratified into Pringsewu District during the plenary session of the House of Representatives on October 29, 2008 [1]. Pringsewu District consists of various ethnic groups and the most is Javanese community compared with the indigenous community of Lampung.

Pringsewu District has 9 sub-districts there are Gadingrejo, Pagelaran, Pardasuka, Pagelaran Utara, Sukoharjo, Banyumas, Adiluwih, Ambarawa and Pringsewu Sub-districts. Pringsewu District has 96 pekons and has 5 sub-districts spread in 9 subdistricts. The district of Pringsewu is the smallest district in Lampung Province [2]. The villages in Pringsewu District are mostly liveable, but there are also some areas that are still left behind, it is because the village is far from the center of Pringsewu city, so it is less attention, so it should get serious attention from the government

Currently Pringsewu District Government in grouping poverty level is still using manual method, that is, only by looking or direct survey of the village by doing manual calculation, so that the data obtained are less accurate, based on the data that have been taken by Government of Pringsewu Regency succeeded in decreasing poverty level each year, based on data from the Central Bureau of Statistics The Development of the Poverty Rate Index in Pringsewu District from 2010 to 2015, is as follows:

Fig. 1: Index of Poverty Rate of Pringsewu District Year 2010-2015 (Source: <https://www.pringsewukab.go.id/visi-misi-bupati-dan-wakil-bupati-pringsewu-periode-2017-2022/>, Accessed on 9 Desember 2017).

Based on the above data can be seen that the poverty rate that occurred in Pringsewu District in recent years has decreased. From the research conducted by Raihana Kaplale [1] entitled Factors Affecting Poverty Level in Ambon city, by studying the level of poverty in the economic strata of each household that covers the level of household expenditure and income level which then look for causes of poverty to know the amount of income to households in each village.

Research conducted by Uning Lestari, Muhammad Targiono entitled Decision Supporting System of Classification of Poor Family as Reference of Government Funds Receiver, by knowing the status of poor families to receive the fund, determining the weight value of each attribute by ranking process to know the category of poor family. Then these results can form the basis for the TPK (Poverty Reduction team) to determine which families

are eligible for government funding so that the distribution of aid is on target.

1.2. Problem formulation

Based on that background then the problems to be faced are :

- 1) How to ranking poverty level on a subdistrict in Pringsweu District using Simple Additive Weighting (SAW method) ?
- 2) How to implement existing data to increase the potency of subdistrict in Pringsweu district.

1.3. Research purpose

The purposes of this research were :

- 1) To know poverty level in Pringsweu region in every year by data ranking in several years
- 2) To develop government data processing system because the current system is manual so it is need better and more integrated data processing.
- 3) With that application program it can increase the potency of Pringsweu district for optimizing data processing.

1.4. Research benefit

The benefits of this research are :

- 1) The results of this research are expected to be a reference for Pringsweu District government to decrease poverty level on subdistricts in Pringsweu District.
- 2) The results of research in the form of web application program is expected to be a solution to replace the system that has been running manually for better data input process

2. Theoretical basis

2.1. Definition of poverty

Poverty is a person's inability to meet basic needs such as food, clothing, education, shelter and health. Poverty is a Global problem which means anyone can experience it, some people are subjective and comparative in understanding this term and others seen evaluative and moral term and some others understand from a scientific point of form in the establishment, etc.

Poverty as a low standard of living, a lack of a number or a group of people compared to this low standard of living that directly influences their health, moral life and pride which is classified as pauper [3].

Poverty is a living conditions that are deprived of a person or household so unable to meet the minimal or decent needs for his life [3]. Some necessary tasks like minimum basic needs in question refers to the one based on food, clothing, housing and social needs required to meet their achievement professionally [10-12] and more ethically [13-15] with being engaged properly [16-18].

Based on the theoretical basis above, the system to be created in this application is Decision Support System to know the level of poverty of Pringsweu District in recent years.

2.2. Internet

Internet refers to the platform with expanding the abbreviation of international network, where the main component combined with an international network amidst the computers all over the world are related to one another [19-21]. At this point, the one computer with another computer could be seen such as TCP / IP, short for Transmission Control Protocol / Internet Protocol [4] [22][23].

PHP is one of the script programming languages designed to build web applications. When called from a web browser, a program written in PHP will be parsed in the Web Server by a PHP interpreter and translated into an HTML document, which will then be displayed back into Web Browser [8] [5] [24] [25]. PHP is

a scripting server language that integrates with HTML to create dynamic web pages in order to gain the maximum achievement of the sources browsing using the digital device [26]-[27].

The value to tackle this poverty issues refers to the initiative to face the obstacles through fulfilling their basic needs and education and work [28-30].

2.3. Website

Website is a method to display information on the Internet in the form of text, figure, sound, or video that is interactive and has the advantage to link (link) one to another document (hypertext) which can be accessed through a browser [6]. Web browser here could be gained with ethical and professional basis to underlie the process of transforming the data from Internet with appropriate and wise approach [31-34]. Such name domain within the particular group of web pages could be generally a part of the domain name (domain name) including the sub domain in the WWW (World Wide Web) on the Internet. WWW consists of all websites which are available to the public.

2.4. Database

Database refers to the number of collection about data interconnected along with the organization or enterprise with a variety of usage [6-7]. The data base is widely engaged into certain rules logically in order to produce information for multi-purpose [35-38]. Thus, the database system could be viewed into the data storage system through optimizing computer. The software that manages the database is called the database management system (DBMS). As a result, the necessity to point out the wide range of system software should gather in enabling the users to create, maintain, control and access databases in a practical and efficient manner [39-41]. The wide range of expanding the responsibility with social concern in using the database within the DBMS pattern should be widely engaged into managing wisely and appropriately [42-44]. Through database manager, the stage of administrator needs to access the generator with its distinctive feature of data storage system through the computer devices.

2.5. Framework

- 1) Start
Beginning of research
- 2) Title
Determining the object and the problems that will be observed
- 3) Introduction
Create background, problem formulation, research purpose and research benefit
- 4) Theoretical Basis
The theory created in research
- 5) Research Method
Data collection and development of information system and flowchart.
- 6) Discussion
Discuss the system used in the research.
- 7) Conclusion
The results from research made
- 8) End
End of research

3. Research method

3.1. Data collection

- a) Observation Method
This method is used by researchers in doing observations or looking into the object of research directly by analyzing and

evaluating the system is running to find the information needed for research materials.

b) Interview Method

This method is done by conducting a conversation between researchers and interviewees to obtain important information from an object. This interview was conducted directly to the community, government officials and related institutions to the governance system in Pringsewu District.

c) Literature Method

A literature study method is used to gain the knowledge and materials needed for research by reading reference journals and related references [8].

3.2. SDLC method

In this designing is used SDLC method that is changing the system and model used to develop those systems, as for steps in implementing this method is as follows

- 1) Planning. In this step it can be interviewed with government employees to obtain information, data collection for the needs of the system will be built
- 2) Analysis. In doing this analysis if the current system encounters problems or constraints then the results of its analysis can be used as a basis for improving the system.
- 3) Designing. Designing in making website which refers to design which have been made before.
- 4) Implentation. Run and operate the system that has been created [9].

4. Implementation

4.1. Simple additive weighting (SAW) method

Simple Additive Weighting method is often also known as weighted summing method. The basic concept of SAW method is to find the weighted sum of performance ratings on each alternative on all attributes. The SAW method requires the process of normalizing the decision matrix (X) to a scale comparable to all existing alternative ratings.

$$r_{ij} = \frac{\frac{X_{ij}}{\max X_{ij}}}{\frac{\sum_{i=1}^m \frac{X_{ij}}{\max X_{ij}}}{\sum_{i=1}^m X_{ij}}}$$

where r_{ij} is the normalized performance rating of the A_i alternative on the attribute C_j ; $i = 1, 2, \dots, m$ and $j = 1, 2, \dots, n$. The preference value for each alternative (V_i) is given as:

$$V_i = \sum_{j=1}^n W_j r_{ij}$$

The higher V_i score indicates that A_i alternative is selected. In Pringsewu District it will be determined which sub District has Highest Poverty rate. There were four Criteria used in the assessment, namely:

- 1) C1 = Road facilities
- 2) C2 = Lighting source
- 3) C3 = clean water
- 4) C4 = Fuel

Decision makers assigned weight to each of the following criteria: C1 = 15%; C2 = 20%; C3 = 25%; and C4 = 15%. There were Seven Sub-districts to be Assessed (alternatives) to determine which Sub-districts have the highest poverty levels, namely:

A1 = Pardasuka Subdistrict

A2 = Ambarawa Subdistrict

A3 = Pagelaran Subdistrict

A4 = Pagelaran Utara Subdistrict

A5 = Sukoharjo Subdistrict

A6 = Banyumas Subdistrict

A7 = Gadingrejo Subdistrict

A8 = Pringsewu Subdistrict

A9 = Adiluwih Subdistrict

4.2. Criteria

4.2.1. Road facilities criteria

Table 1 shows road facilities criteria.

Table 1: Road Facilities Criteria.

Road	Weight	Description
Dirt road	60	Low
Underground road	70	Medium
Latasir road	80	Good
Hotmix road	90	Very good

(Source: Public Word Department, Research and Development Institution , 2004)

4.2.2. Lighting source criteria

Table 2 shows lighting source criteria.

Table 2: Lighting Source Criteria

Lighting	Weight	Description
Sentir lamp	60	low
Generator lamp	70	medium
Public PLN lamp	80	good
Private PLN lamp	90	Very good

(Source: Public Word Department, Research and Development Institution , 2004)

4.2.3. Clean water criteria

Table 3 shows clean water criteria.

Table 3: Clean Water Criteria

Clean water	weight	Description
River water	60	low
Spring water	70	medium
Well	80	good
PDAM	90	Very good

(Source: Public Word Department, Research and Development Institution , 2004)

4.2.4. Fuel criteria

Table 4 shows fuel criteria.

Table 4: Fuel Criteria

Fuel	weight	description
fierwood	60	low
charcoal	70	medium
kerosene	80	good
LPG	90	Very good

((Source: Public Word Department, Research and Development Institution , 2004)

Table 5 shows alternative for each criteria.

Table 5: Alternative for Each Criteria

Alternative		Criteria			
		C1	C2	C3	C4
A1	Pardasuka Subdistrict	90	80	80	80
A2	Ambarawa Subdistrict	70	80	80	70
A3	Pagelaran Subdistrict	90	80	90	70
A4	Pagelaran Utara Subdistrict	90	80	90	70
A5	Sukoharjo Subdistrict	70	80	90	90
A6	Banyumas Subdistrict	70	80	90	80
A7	Gadingrejo Subdistrict	90	80	80	90
A8	Pringsewu Subdistrict	90	80	90	90
A9	Adiluwih Subdistrict	90	80	80	70

4.3. Normalization for each criterion

Normalization is done by dividing the alternative score of each candidate then divided by the largest score of the score of each alternative.

a) Alternative Normalization

$$R1.1 = \frac{90}{80} = 1.125$$

$$R1.2 = \frac{80}{80} = 1$$

$$R1.3 = \frac{80}{80} = 1$$

$$R1.4 = \frac{80}{80} = 1$$

b) Alternative Normalization

$$R2.1 = \frac{70}{90} = 0.777$$

$$R2.2 = \frac{80}{80} = 1$$

$$R2.3 = \frac{80}{80} = 1$$

$$R2.4 = \frac{70}{80} = 0.875$$

c) Alternative Normalization

$$R3.1 = \frac{90}{90} = 1$$

$$R3.2 = \frac{80}{80} = 1$$

$$R3.3 = \frac{90}{80} = 1.125$$

$$R3.4 = \frac{70}{80} = 0.875$$

d) Alternative Normalization

$$R4.1 = \frac{90}{90} = 1$$

$$R4.2 = \frac{80}{80} = 1$$

$$R4.3 = \frac{90}{80} = 1.125$$

$$R4.4 = \frac{70}{80} = 0.875$$

e) Alternative Normalization

$$R5.1 = \frac{70}{70} = 1$$

$$R5.2 = \frac{80}{80} = 1$$

$$R5.3 = \frac{90}{80} = 1.125$$

$$R5.4 = \frac{90}{80} = 1.125$$

f) Alternative Normalization

$$R6.1 = \frac{70}{70} = 1$$

$$R6.2 = \frac{80}{80} = 1$$

$$R6.3 = \frac{90}{80} = 1.125$$

$$R6.4 = \frac{80}{80} = 1$$

g) Alternative Normalization

$$R7.1 = \frac{90}{90} = 1$$

$$R7.2 = \frac{80}{80} = 1$$

$$R7.3 = \frac{80}{80} = 1$$

$$R7.4 = \frac{90}{80} = 1.125$$

h) Alternative Normalization

$$R8.1 = \frac{90}{90} = 1$$

$$R8.2 = \frac{80}{80} = 1$$

$$R8.3 = \frac{90}{80} = 1.125$$

$$R8.4 = \frac{90}{80} = 1.125$$

i) Alternative Normalization

$$R9.1 = \frac{90}{90} = 1$$

$$R9.2 = \frac{80}{80} = 1$$

$$R9.3 = \frac{80}{80} = 1$$

$$R9.4 = \frac{70}{80} = 0.875$$

Ranking process using weights given by the decision maker: $w = [0.15 \ 0.20 \ 0.25 \ 0.15]$. The results obtained were as follows:

$$\begin{aligned} V1 &= (0,15)*(1,125)+(0,20)*(1)+(0,25)*(1)+(0,15)*(1) \\ &= 0,168 + 0,20 + 0,25 + 0,15 \\ &= 0.768 \end{aligned}$$

$$\begin{aligned} V2 &= \\ &= (0,15)*(0,777)+(0,20)*(1)+(0,25)*(1)+(0,15)*(0,875) \\ &= 0,116 + 0,20 + 0,25 + 0,131 \\ &= 0.697 \end{aligned}$$

$$\begin{aligned} V3 &= \\ &= (0,15)*(1)+(0,20)*(1)+(0,25)*(1,125)+(0,15)*(0,875) \\ &= 0,15 + 0,20 + 0,281 + 0,131 \end{aligned}$$

$$= 0.762$$

$$\begin{aligned} V4 &= \\ &= (0,15)*(1)+(0,20)*(1)+(0,25)*(1,125)+(0,15)*(0,875) \\ &= 0,15 + 0,20 + 0,281 + 0,131 \\ &= 0.762 \end{aligned}$$

$$\begin{aligned} V5 &= \\ &= (0,15)*(1)+(0,20)*(1)+(0,25)*(1,125)+(0,15)*(1,125) \\ &= 0,15 + 0,20 + 0,281 + 0,168 \\ &= 0.799 \end{aligned}$$

$$\begin{aligned} V6 &= \\ &= (0,15)*(1)+(0,20)*(1)+(0,25)*(1,125)+(0,15)*(1) = 0,15 + 0,20 + \\ &0,281 + 0,15 \\ &= 0.781 \end{aligned}$$

$$\begin{aligned} V7 &= \\ &= (0,15)*(1)+(0,20)*(1)+(0,25)*(1)+(0,15)*(1,125) = 0,15 + 0,20 + \\ &0,25 + 0,168 \\ &= 0.768 \end{aligned}$$

$$\begin{aligned} V8 &= \\ &= (0,15)*(1)+(0,20)*(1)+(0,25)*(1,125)+(0,15)*(1,125) = 0,15 + \\ &0,20 + 0,281 + 0,168 \\ &= 0.799 \end{aligned}$$

$$\begin{aligned} V9 &= \\ &= (0,15)*(1)+(0,20)*(1)+(0,25)*(1)+(0,15)*(0,875) = 0,15 + 0,20 + \\ &0,25 + 0,131 \\ &= 0.731 \end{aligned}$$

4.4. Reflection and some implications

Referring to increasing the potential of poverty level with the innovative enhancement [45-47], adopting with possessing the reference of the government in reducing is entirely a pivotal role to give insights into the professional initiation [48-49]. The grouping manifestation has to be involved with initiating the number of tasks in maximizing the process with its potential value to achieve wisely in particular attention to sustainable enhancement [50-52]. As a result, it is necessary to look deeply into the core component of manufacturing the process with expanding the basic role of poverty criteria [53-55]. In order to gather the good result, the coordination from each component has to be involved with expanding the commitment of distinctive criteria to be more concerned with being wise and appropriate procedure stage [56-58]. The alternative point would need to achieve the approval coexistence in obtaining the best result [59-61]. In trying to get the core point of this initiative, the implementation might need to further elaborate the significant enhancement of positive distribution into expanding the social concern [62] with an innovative exposure through digital device.

5. Conclusion

Based on the above discussion then there was the smallest score on V2 so A2 alternative was selection alternative. In other words, Ambarawa District had the lowest score criteria, then Ambarawa Sub-district was included as poor in the sense which could be viewed as underdeveloped so that the District is expected to get special attention. It is expected that in determining a poor or underdeveloped area can be applied in other areas so that the region gets special attention from the Government in order to increase the potential of the region by adding other criteria.
