SUMÁRIO

APRESENTAÇÃO

Ensaios de adubação em seringueira, conduzidos no Brasil e em outros países produtores em borracha tem demonstrado que a cultura responde significativamente a esta prática cultural.

Temos como propósito enfatizar a necessidade de manejos apropriados para reduzir o período de imaturidade, acelerar o desenvolvimento vegetativo e proporcionar resistência à doenças através de plantas eficientemente nutridas.

É com este objetivo que o Centro Nacional de Pesquisa da Seringueira e Dendê, lança esta bibliografia que representa uma coletânea geral de trabalhos com fertilidade de solos e nutrição de seringueira, dada a urgência de oferecer uma fonte de informação cujo número aumenta através dos trabalhos produzidos nessa área de adubação, bem como fornecer a aqueles que se dedicam ao assunto, subsídios indispensáveis para ampliar o conhecimento de informações geradas e adquiri-la através do Serviço de Comutação Bibliográfica oferecido pelo Sistema EMBRAPA-DID.

A bibliografia é condição essencial a qualquer trabalho projetado no campo da pesquisa.

Olinto Gomes da Rocha Neto

INTRODUÇÃO

Dado a carência de bibliografia especializada por produtos ou áreas específicas de conhecimento, acessível aos pesquisadores, o Setor de Informação e Documentação (SID) das Unidades da EMBRAPA tem como um de seus objetivos suprir essa necessidade, colocando à disposição dos usuários todo o acervo de informação em cada área, incluíndo a literatura mais recente.

O presente levantamento bibliográfico sobre Fertilidade de solos e nutrição da seringueira, procura exatamente cobrir a lacuna existente nesse campo, reunindo um total de 686 referências, compiladas de várias fontes de pesquisa.

As referências bibliográficas obedecem às normas brasileiras (ABNT), adaptadas pela EMBRAPA. As abreviaturas dos Títulos de Periódicos foram extraídos da "Bibliographie Guid for Editors & Authors, da American Chemical Society, 1974.

Os autores registram seus agradeciemntos a Auxiliar de Biblioteca Josmarina de Fatima Pereira dos Santos, pelo trabalho datilográfico.
