DR. PASCALINE DUPAS
*Associate Professor in the Economics
Department at Stanford University*

Many poor people around the world still do not benefit from essential health products. An estimated two-thirds of child deaths could be prevented with increased coverage of vaccines, point-of-use water treatment, iron fortification, and insecticide-treated bednets. In this lecture, Pascaline Dupas, Associate Professor of Economics at Stanford University and co-chair of the Health Sector at MIT's Jameel Poverty Action Lab (JPAL) will examine the factors that limit the flow of products from the producer's laboratory bench to the end users.
