Systematic Reviews and Meta-analyses in Evidence-Based Medicine

A CUTTING EDGE WORKSHOP

A theoretical and practical workshop on the key principles of
systematic reviews and meta-analyses in the context of
Evidence-Based practice and research

Organized by
Institute of Public Health and National Medical Library
College of Medicine and Health Sciences at UAEU

May 2-3, 2019

- ◆ Early bird registration until April 26th 2019
- ◆ Limited seats available
- ◆ Discounts for students and UAEU employees
- ◆ Venue: The National Medical Library, College of Medicine and Health Sciences,
UAEU, Al Ain

For full details and registration,
please scan the QR code or visit:

12 CME credits
Accredited by the College of Medicine
and Health Sciences, UAEU

CONTENT

- ❖ Systematic reviews and meta-analyses: background and development, connection to EBM and clinical usefulness and impact
- ❖ The research process and reporting standards
- ❖ The systematic search process and search methodologies
- ❖ Practical examples of search technical impact on the search/research result

SYSTEMATIC REVIEW: DEFINITION

“A systematic review attempts to **collate all empirical evidence** that fits **pre-specified criteria** in order to answer **a specific research question**. It uses explicit, **systematic methods** that are selected with a view to **minimizing bias**, thus providing more reliable findings from which conclusions can be drawn and decisions made”.

Many systematic reviews also contain **meta-analysis**, statistical methods to summarize the results of the identified studies.

CONNECTED TO EVIDENCE BASED MEDICINE

- ❖ The first formal guides for systematic review methods dates back to the mid-1970th (ePPI centre, 2016)
- ❖ Developed together of Evidence Based Medicine in the mid-1990s
- ❖ The Cochrane Collaboration formed in 1993 (“Promote evidence-informed health decision-making by producing high-quality, relevant, accessible systematic reviews and other synthesized research evidence”)
- ❖ Gordon Guyatt: first to coin the term EBM in 1993
- ❖ The “father” of EBM: David Sackett (“Evidence based medicine: what it is and what it isn’t”, BMJ, 1996)

CLINICAL IMPACT OF SYSTEMATIC REVIEWS

Example: Baby's sleep position

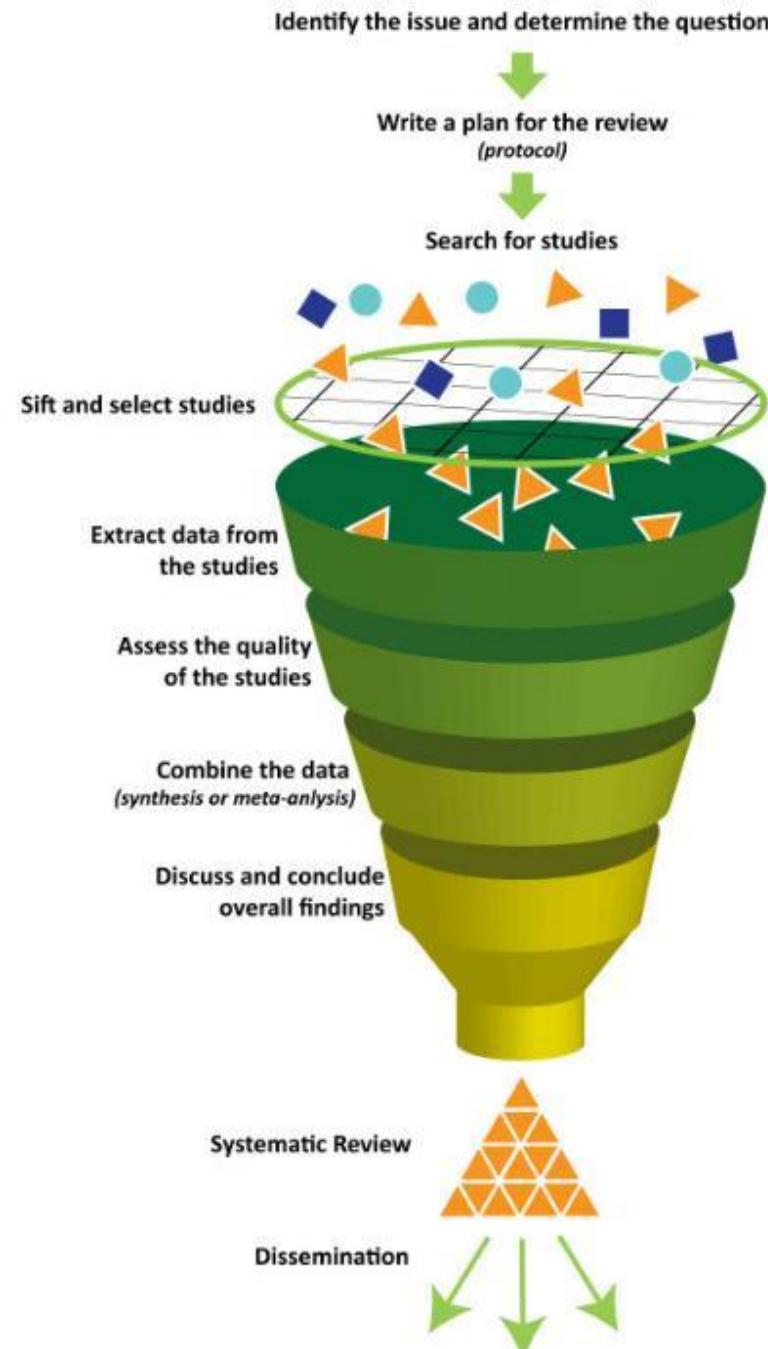

Evans I, Thornton H, Chalmers I, et al. Testing Treatments: Better Research for Better Healthcare. 2nd edition. London: Pinter & Martin; 2011. Chapter 2, Hoped-for effects that don't materialize.

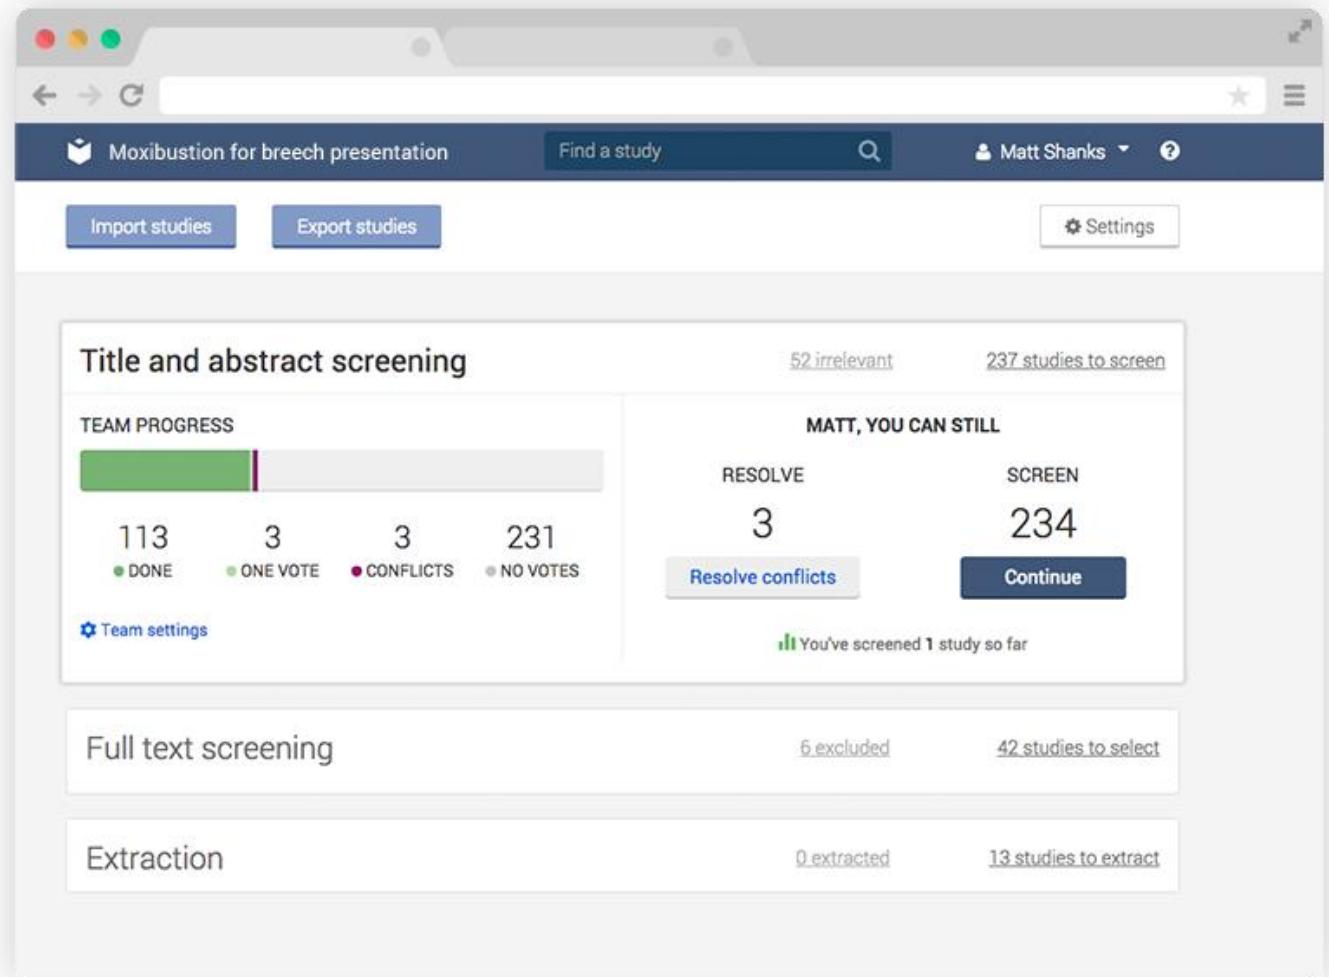

THE SYSTEMATIC REVIEW PROCESS

Average time for a systematic review: 18 months (Cochrane Handbook)

COVIDENCE SR TOOL

- ❖ User-friendly
- ❖ Cloud-based
- ❖ Collaboration tool
- ❖ De-duplication
- ❖ Blinded screening
- ❖ Mobile screening
- ❖ Extract and analyze

www.covidence.org

ALL STEPS ON ONE PAGE

The screenshot shows the Covidence software interface for a review titled "Sleep and mood". The top navigation bar includes "Find a study" and a user profile for "Linda Östlundh".

The main area is titled "Review Summary" and contains the following sections:

- Import references:** Includes a button to "Import" from a cloud icon.
- Title and abstract screening:** Shows 1008 irrelevant studies and 0 studies to screen.
- Full text screening:** Shows 123 excluded studies and 0 studies to select.
- Extraction:** Shows 0 extracted studies and 72 studies to extract.

TEAM PROGRESS: A progress bar indicates 0 DONE, 1 STARTED, and 71 NOT STARTED studies.

LINDA, YOU CAN STILL EXTRACT: Shows 72 studies available for extraction.

Team settings: A link to manage team settings.

You've completed 0 extractions so far: A message indicating the user has not yet started extraction.

REPORTING METHODS

STANDARDIZED REPORTING METHODS

- ❖ 1996- The Cochrane Handbook
- ❖ 1999- QUROM (QUality Of Reporting Of Meta-analyses)
- ❖ 2000- MOOSE (Meta-analysis of observational studies in epidemiology)
- ❖ 2009- PRISMA (Preferred Reporting Items for Systematic Reviews and Meta- analyses)
- ❖ 2011- IOM (Institute of Medicines Standards for Systematic Reviews)

PRISMA

Preferred or required reporting method for:

- ❖ The Lancet
- ❖ The British Medical Journal (BMJ)
- ❖ Annals of Internal Medicine
- ❖ The Journal of the American Medical Association (JAMA)

...and more

PRISMA ([HTTP://WWW.PRISMA-STATEMENT.ORG/](http://www.prisma-statement.org/))

- ❖ List of (27) preferred reporting items for SRs and MAs
- ❖ Screening and selection flow diagram
- ❖ Help, tips and support

The screenshot shows the PRISMA website homepage. At the top, there is a navigation bar with links for HOME, PRISMA STATEMENT, EXTENSIONS, TRANSLATIONS, PROTOCOLS, and ENDORSEMENT. The PRISMA logo and tagline "TRANSPARENT REPORTING OF SYSTEMATIC REVIEWS AND META-ANALYSES" are displayed. The main content area features a welcome message: "Welcome to the Preferred Reporting Items for Systematic Reviews and Meta-Analyses (PRISMA) website! PRISMA is an evidence-based minimum set of items for reporting in systematic reviews and meta-analyses. PRISMA focuses on the reporting of reviews evaluating randomized trials, but can also be used as a basis for reporting systematic reviews of other types of research, particularly evaluations of interventions." To the right, a sidebar titled "Key Documents" lists the PRISMA Checklist, PRISMA flow diagram, PRISMA Statement, and PRISMA E&E. Below the main content, there are logos for PROSPERO (International prospective register of systematic reviews) and the equator network. A "News Feed" section at the bottom right contains a single item: "PRISMA Website re-design". On the far right, there is a "Tweets" section with a tweet from the PRISMA Statement account.

PRISMA
TRANSPARENT REPORTING OF SYSTEMATIC REVIEWS AND META-ANALYSES

HOME PRISMA STATEMENT EXTENSIONS TRANSLATIONS PROTOCOLS ENDORSEMENT

Welcome to the Preferred Reporting Items for Systematic Reviews and Meta-Analyses (PRISMA) website!

PRISMA is an evidence-based minimum set of items for reporting in systematic reviews and meta-analyses. PRISMA focuses on the reporting of reviews evaluating randomized trials, but can also be used as a basis for reporting systematic reviews of other types of research, particularly evaluations of interventions.

Who should use PRISMA?

- Authors: PRISMA aims to help authors improve the reporting of systematic reviews and meta-analyses.
- Journal Peer reviewers and editors: PRISMA may also be useful for critical appraisal of published systematic reviews, although it is not a quality assessment instrument to gauge the quality of a systematic review.

Key Documents

- PRISMA Checklist
- PRISMA flow diagram
- PRISMA Statement
- PRISMA E&E

THE PRISMA CHECKLIST

PRISMA 2009 Checklist

Section/topic	#	Checklist item	Reported on page #
Risk of bias across studies	15	Specify any assessment of risk of bias that may affect the cumulative evidence (e.g., publication bias, selective reporting within studies).	
Additional analyses	16	Describe methods of additional analyses (e.g., sensitivity or subgroup analyses, meta-regression), if done, indicating which were pre-specified.	
RESULTS			
Study selection	17	Give numbers of studies screened, assessed for eligibility, and included in the review, with reasons for exclusions at each stage, ideally with a flow diagram.	
Study characteristics	18	For each study, present characteristics for which data were extracted (e.g., study size, PICOS, follow-up period) and provide the citations.	
Risk of bias within studies	19	Present data on risk of bias of each study and, if available, any outcome level assessment (see item 12).	
Results of individual studies	20	For all outcomes considered (benefits or harms), present, for each study: (a) simple summary data for each intervention group (b) effect estimates and confidence intervals, ideally with a forest plot.	
Synthesis of results	21	Present results of each meta-analysis done, including confidence intervals and measures of consistency.	
Risk of bias across studies	22	Present results of any assessment of risk of bias across studies (see Item 15).	
Additional analysis	23	Give results of additional analyses, if done (e.g., sensitivity or subgroup analyses, meta-regression [see Item 16]).	
DISCUSSION			
Summary of evidence	24	Summarize the main findings including the strength of evidence for each main outcome; consider their relevance to key groups (e.g., healthcare providers, users, and policy makers).	
Limitations	25	Discuss limitations at study and outcome level (e.g., risk of bias), and at review-level (e.g., incomplete retrieval of identified research, reporting bias).	
Conclusions	26	Provide a general interpretation of the results in the context of other evidence, and implications for future research.	
FUNDING			
Funding	27	Describe sources of funding for the systematic review and other support (e.g., supply of data); role of funders for the systematic review.

PLAN AND STRUCTURE YOUR PROCESS WITH A PROTOCOL

- ❖ Required standard item in PRISMA, Cochrane, IOM etc. for transparency of the research process
 - ❖ The protocol can be published in a journal or in a register/database

PROSPERO: REGISTER FOR ONGOING AND PUBLISHED SYSTEMATIC REVIEWS

- ❖ Provides a template for protocols
- ❖ Receive an official registration no. for the review to submit to the journal
- ❖ Covers protocol items for different standards (PRISMA, Cochrane...).

PRE-SEARCH FOR ONGOING AND PUBLISHED REVIEWS

PRESS

Evidence- based checklist for systematic searches

Link: <https://www.cadth.ca>

Translation of the research question	<ul style="list-style-type: none">• Does the search strategy match the research question/PICO?• Are the search concepts clear?• Are there too many or too few PICO elements included?• Are the search concepts too narrow or too broad?• Does the search retrieve too many or too few records? (Please show number of hits per line.)• Are unconventional or complex strategies explained?
Boolean and proximity operators (these vary based on search service)	<ul style="list-style-type: none">• Are Boolean or proximity operators used correctly?• Is the use of nesting with brackets appropriate and effective for the search?• If NOT is used, is this likely to result in any unintended exclusions?• Could precision be improved by using proximity operators (e.g., adjacent, near, within) or phrase-searching instead of AND?• Is the width of proximity operators suitable (e.g., might adj5 pick up more variants than adj2)?
Subject headings (database-specific)	<ul style="list-style-type: none">• Are the subject headings relevant?• Are any relevant subject headings missing; e.g., previous index terms?• Are any subject headings too broad or too narrow?• Are subject headings exploded where necessary and vice versa?• Are major headings ("starring" or restrict to focus) used? If so, is there adequate justification?• Are subheadings missing?• Are subheadings attached to subject headings? (Floating subheadings may be preferred.)• Are floating subheadings relevant and used appropriately?• Are both subject headings and terms in free text (see below) used for each concept?

SEARCH METHODOLOGY AND QUALITY IMPACT

- ❖ The search in many SRs and MAs are still of poor quality and includes a very high percentage (up to 93%) of search technical errors (Golder, Loke, & Zorzela, 2013; Grossetta et al. 2019; Koffel & Rethlefsen, 2016; Opheim et al. 2019; Rethlefsen et al. 2015; Salvador-Oliván et al. 2019)
- ❖ Close connection between the quality of the search and method documentation and the quality and risk of bias of SRs and MAs (Golder, Loke, & Zorzela, 2013; Peters et al. 2015; Rethlefsen, Murad, & Livingston, 2014)
- ❖ Poor search documentation and lack of method transparency reduces usefulness of SRs and MAs in evidence based clinical settings (Golder, Loke, & McIntosh, 2008; Knehans, Dell & Robinson, 2016 Peters et al. 2015)

THE SYSTEMATIC SEARCH PROCESS

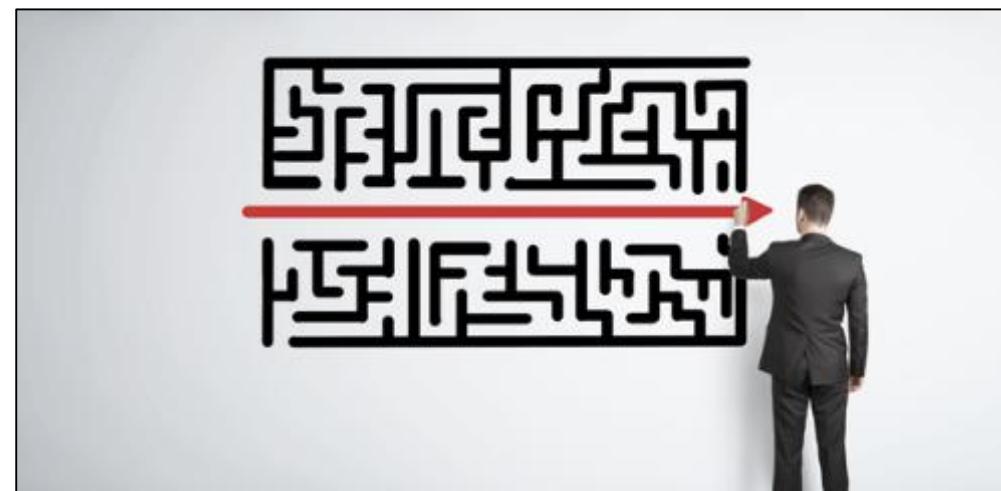

- ❖ Pre- search to test and identify:
 - Search terms
 - Search strategy
 - Resources
- ❖ Systematic developing and testing the search in one selected database
- ❖ Translate the search to all selected databases
- ❖ Update the search

SEARCH STRATEGIES AND SEARCH TECHNIQUES

RULE NO. 1: KEEP IT “SIMPLE”

Search one term at the time and concentrate on search term inclusion, combinations and process analysis rather than database functions

FOCUS ON THE SEARCH TERMS

Is there a relation between diabetes type 2 in children and food habits

Type 2 diabetes	Food	Exercise	Health information
Diabetes type 2	Food intake	Sport	Patient education
Type 2 diabetes	Nutrition	Activity	Patient learning
Diabetes Mellitus type 2	Malnutrition	Physical activity	Health education
Non insulin dependent diabetes	Eating	Fitness	
NIDDM	Diet	Running	
Diabetes Mellitus type II	Dieting	Swimming	

Advanced vs Basic Search

Basic search:

- PubMed interprets your search= **low precision**
- Limited search functions

Advanced search:

- You have full control over the search= **high precision**
- Advanced search functions available including
search history and field search

Search Example

Nursing

Use the builder below to create your search

[Edit](#)[Clear](#)**Builder**

All Fields ▼

[Show index list](#)

AND ▼

All Fields ▼

[Show index list](#)[Search](#)[or Add to history](#)**History**[Download history](#) [Clear history](#)

Search	Add to builder	Query	Items found	Time
#2	Add	Search nursing [Title/Abstract]	261168	03:37:34
#1	Add	Search nursing	759154	03:37:06

SEARCH TECHNIQUES

- ❖ Truncation (Child*= child, children, children's...)
- ❖ Phrasing ("myocardial infarction")
- ❖ Field search (Title, Abstract, MeSH)
- ❖ Boolean operators (AND, OR, NOT)
- ❖ Search history (helps you structure and combine)

MeSH/Thesaurus terms can take 2 months
or more to appear in the database

A close-up photograph of a large stack of books and magazines. The spines of the books are visible, showing various titles and colors, including shades of blue, green, yellow, and white. The books are stacked in a somewhat disorganized manner, creating a sense of depth and volume.

IDENTIFYING RELEVANT INFORMATION RESOURCES

INFORMATION RESOURCES: SOME EXAMPLES

Medical databases

- ❖ PubMed
- ❖ Medline
- ❖ Cochrane
- ❖ Embase
- ❖ Scopus
- ❖ SciencDirect
- ❖ Web of Science

Other databases

- ❖ CINAHL
- ❖ Psych Info/Psych Articles
- ❖ Africa Wide Information
- ❖ Academic Search Complete
- ❖ Eric
- ❖ EconLit
- ❖ SocIndex

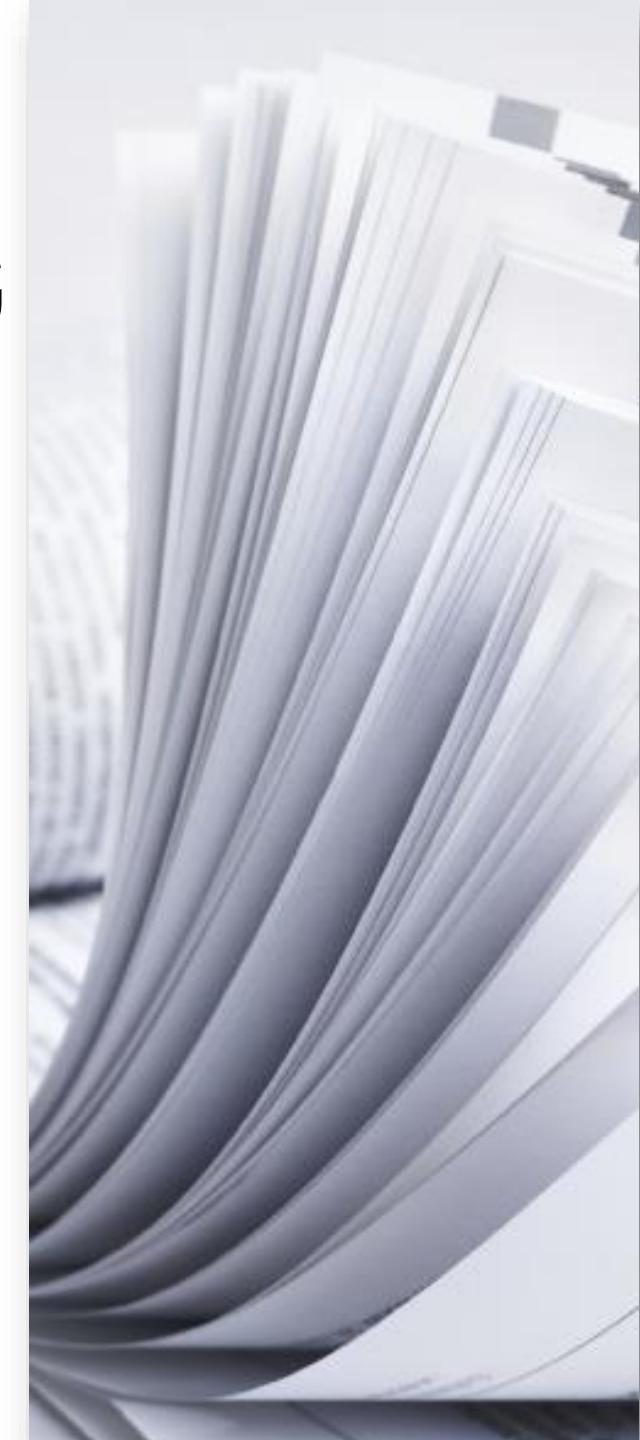

GREY LITERATURE

- Conference papers/conference proceedings
- E-prints
- Fact sheets, bulletins
- Government documents
- Government reports
- Informal communication
- Interviews
- Newsletters
- Pamphlets
- Blogs
- Patents
- Policy statements
- Reports
- Research Data
- Research reports
- Surveys
- Theses
- Tweets
- Working papers
- ...and more

HAND SEARCHING AND REFERENCE SCREENING

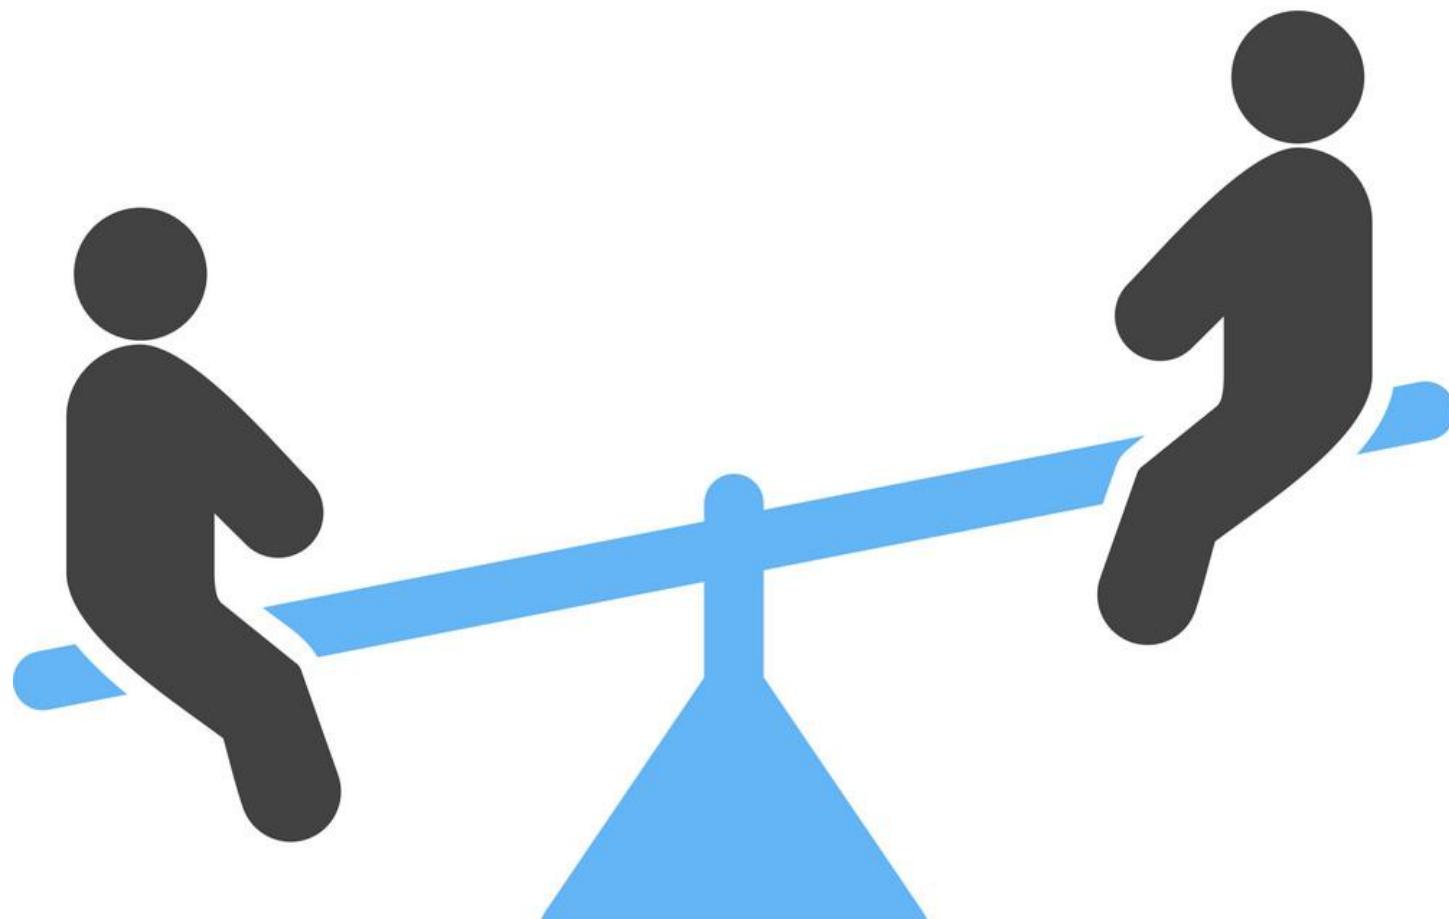

- ❖ Screening of references in identified articles
- ❖ Screening of archived/printed materials or conference abstracts.
- ❖ Make sure to systematically conduct and documented the hand screening in the **methodology** (method, inclusion, number of references screened and result)

INCLUDE A VARIETY OF INFORMATION RESOURCES

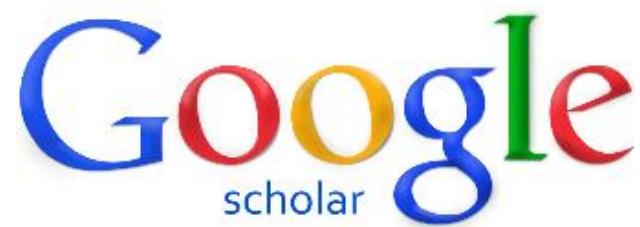

Examples of systematic reviews	Is the current HbA1c level of 6.5% for diabetes diagnosis too high	Systematic review and meta-analysis on the effect of soy on thyroid function	The association between boarding in the emergency department and in-hospital mortality	Cost-effectiveness of non-surgical weight loss interventions for diabetic obese patients	A systematic review to assess the relationship between sleep duration and mood in adolescents
PubMed result	4916	1501	1451	518	781
Result from additional databases included	7880	3424	6242	1157	1381
Total no. of references after de-duplication	9324	1816	4321	1120	1532
% of total no. of references not covered by PubMed	47,3%	17,3 %	66,4%	53,7%	49%

COMPREHENSIVENESS VS UP-TO-DATE

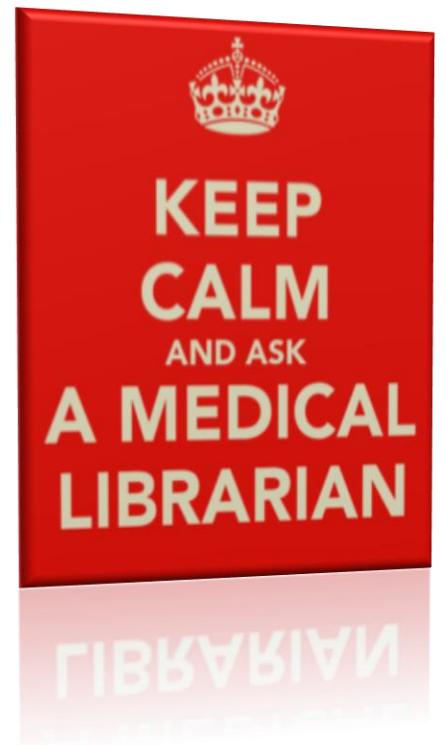

GOOGLE SCHOLAR FOR SYSTEMATIC REVIEWS?

- ❖ Great for pre and post search scanning
- ❖ Lacks proper search tools
- ❖ Generates too many (irrelevant) references – a lot to screen
- ❖ A good search in selected databases should cover all relevant information available in Google Scholar
- ❖ Includes more predatory journals

INVOLVING A MEDICAL LIBRARIAN

- ❖ Guidelines like IOM and the Cochrane's Handbook recommends that a professional medical librarian develops the search strategy and performs and documents the search process
- ❖ SRs and MAs with a librarian included as a co- author, are generally of higher quality (search and documentation) compared to studies only supported by a librarian or without a librarian's involvement (Meert & Costella, 2016; Rethlefsen et al., 2015)
- ❖ Reduces the risk of bias
