ABSTRACT

This report investigates family businesses in the UK and focuses on their incidence, industrial and geographical context and their governance and performance relative to non-family businesses. The sample includes near population UK data for the period 2007 to 2009 of privately held incorporated firms (excluding listed/quoted firms) and analyses around 3 million firm-year observations. The report compares and contrasts family businesses with non-family businesses with reference to governance and performance during the current recession. Family businesses that are structured with 'family trusts/settlements' are considered as an important sub-sample of family businesses in the report. The analysis highlights important differences between family and non-family firms across a number of dimensions of governance and firm performance.

EXECUTIVE SUMMARY

Sample

- This report investigates family businesses in the UK for the period 2007 to 2009 and looks at their industrial and geographical context, governance and performance relative to non-family businesses. The analysis sample includes near UK population data with over 3 million firm-year observations. SMALL, MEDIUM and LARGE sized firms are identified consistent with the “Companies Act 2006” definitions and further analysis is conducted accordingly for each firm size group.
- The report reveals that family businesses form around 28% of businesses in the UK among privately held incorporations although the percentage of family firms decreases by firm size. However, despite the relatively lower intensity of family firms among large firms, the percentage of family firms with family trusts/settlements increases as the firm size increases.

Age, Industry and Region

- Larger firms are found to be older in general. Regarding the family businesses, although small and medium sized family firms are found to be slightly older than non-family firms, the difference disappears in the large firm category given that large firms already tend to be older. When family trust firms are considered, however, they tend to be much older even in the large firm category.
- The report shows that family businesses tend to operate more in agriculture and fishing, manufacture of food products, beverages, textiles, leather, wood products and metal products, retail trade and sale, maintenance and repair of motor vehicles and motorcycles. A greater percentage of family firms with family trust/settlements are particularly apparent in agriculture and fishing and real estate activities. The lowest incidences of family businesses are seen in electricity, gas, steam and hot water supply, transport, post and telecommunications, financial intermediation and education.
- Family businesses are distributed evenly among the UK regions (around 30%) with the exception of London where the percentage of family businesses is as low as around 20%. However, Yorkshire and Scotland have lower incidences of family

firms compared to the other regions in the UK among LARGE sized firms. The percentage of family trust firms, on the other hand, is the highest in London where North East and North West have the lowest incidences of family trust firms.

Governance

- Out of around 300,000 family firms as of the start of year 2009, around 52,000 firms had non-family directors on board accounting for around 17% of all family firms in the sample.
- Family firms tend to have older directors than non-family firms. Average age of directors increases for non-family firms as the firm size increases. However, average age is rather stable for family firms regardless of firm size.
- Directors of family trust firms tend to be more experienced as a director (also within the particular industry of the firm) than directors of family non-trust firms, which in turn are more experienced than non-family firm directors. However, as firm size grows, the difference in experience between directors of family firms and those of non-family firms disappear although directors of family trust firms always appear to be more experienced as a director.
- Owner-management degree, in general, decreases as firm size increases. Although family firms consistently have a greater owner-managed percentage than non-family firms do, the difference is much greater among large sized firms.
- Incidence of female directors decreases as firm size increases. Family firms tend to have a greater percentage of female directors than family trust firms and non-family firms.
- Smaller firm directors, in general, appear to reside closer to the registered addresses of the businesses than larger firm directors do. Family firm directors tend to reside closer to firms regardless of firm size.
- Non-family firms appear to have a higher level of multiple directorships of their directors with other firms than family firms do. The figures are consistent for different firm size groups and for the level of multiple directorships within the same industry.
- The extent of recent director turnover increases by firm size among family firms but especially among non-family firms. Family trust firms have a director turnover degree higher than family firms but lower than non-family firms regardless of the firm size.

Performance

- Corporate insolvency rates in the sample increase during 2009, consistent with the expectation due to the recession. Large sized firms appear to have higher insolvency rates (3.54% in 2009) than small sized firms (1.56% in 2009) where medium sized firms have the lowest figures (0.90% in 2009). Family firms consistently have lower insolvency rates than non-family firms regardless of the firm size.
- In general, non-insolvency related dissolution rate is also higher during 2009 compared to the earlier years. Large sized firms, however, have the lowest dissolution rate as opposed to having the highest insolvency rate. Family firms have lower dissolution rates than non-family firms among small and medium sized firms. But, the dissolution rates are similar between family and non-family firms among large sized firms.
- It appears that large sized firms tend to exit through insolvencies rather than non-insolvency related dissolutions. Small and medium sized firms, on the other hand, mostly exit through non-insolvency related closures. Family firms, in general, have lower rates in both exit categories, insolvency and dissolution, than non-family firms.

Financial Indicators

- Small sized firms tend to have lower current ratio figures, higher net cash to net worth ratios, lower inventory relative to assets and greater use of trade credit. Medium sized firms appear to have the lowest figures for inventory and trade credit related indicators suggesting a trade credit flow especially between small and large firms. Family trust firms appear to use trade credit the least among small and medium sized firms whereas family firms with no trust use trade credit the most especially among large firms.
- Family firms appear to have lower net worth figures in general. But, they o have greater change in net worth and retained profits to total assets indicators. The figures may suggest more profit sharing among shareholders for non-family firms rather than retaining profits for further investment.
- Family firms have higher figures for return on assets and profit margin in general.
- Figures suggest that family firms are less leveraged than non-family firms. However, non-family firms have greater interest coverage ratios than family firms. It appears

that although non-family large firms are higher leveraged, they may also be making enough profits to cover their interest payments.

Turnover and Number of Employees

- Average turnover and growth in turnover are lower for family firms among large-sized firms. However, average turnover of family firms is greater among medium-sized firms and growth in turnover is only slightly lower than for non-family firms.
- Average number of employees and average growth in the number of employees are found to be lower for family firms (growth in employee numbers is only slightly lower).

Employee Wages and Directors Emoluments

- It appears that family businesses pay less to employees but slightly more to directors. Average dividends payable figure, on the other hand, is significantly lower for family businesses consistent with the greater values found for family businesses regarding retained earnings.

1. ANALYSIS SAMPLE AND FIRM SIZE

Analysis is carried out for the period 2007 to 2009 using data compiled to “Companies House” in the UK. Separate samples are generated for each of the analysis years (2007, 2008, and 2009) under examination. Samples include UK privately held incorporated firms (excluding listed/quoted firms) that filed at least one set of annual accounts until the start date of each analysis year (e.g. 01/01/2007). Group holding firms are removed from the samples to avoid double counting of accounts. In other words, consolidated accounts are removed from the samples. Such holding firms are subject to further investigation. “Companies Act 2006” definitions (accounting requirements) are used to detect the firm size; SMALL, MEDIUM, or LARGE¹. All further analyses are then carried out for each firm size category separately. Table-1 provides the sample distribution for each analysis year and firm size category. For instance, it appears that there were 826,280 SMALL sized (76.7%), 199,339 MEDIUM sized (18.5%) and 51,713 LARGE sized firms (4.8%) out of 1,077,332 sample firms in total in 2009. Out of 826,280 SMALL sized firms in the sample of 2009, around 17% of firms were low asset businesses, i.e. less than £8,000 total assets. As of the start of 2009, average TOTAL ASSETS figures for SMALL, MEDIUM and LARGE sized firms were around £0.5 million, £12 million, and £85 million, respectively.

TABLE 1: SAMPLE SIZE

Number of Firms in the sample

	<u>SMALL</u>	<u>MEDIUM</u>	<u>LARGE</u>	<u>TOTAL</u>
<u>2007-</u>	631,239	218,310	49,937	899,486
<u>2008-</u>	752,677	216,063	54,800	1,023,540
<u>2009-</u>	826,280	199,339	51,713	1,077,332

Source: NUBS/CMRC

2. FAMILY FIRM DEFINITION

Family firms are identified through the analysis of shareholding (ownership structure) and directorship information of incorporated firms in the UK as filed to “Companies House”. A firm is considered as a family business if the family has more than 50% of the total shares of the firm and at least one family shareholder is also a director of the firm. As of the start of year 2009, our sample estimates around 28% family firms among the UK incorporated businesses (out of around one million firms with at least one set of annual accounts filed by then). Table-2 reveals that the percentage of non-family firms increases by firm size. For instance, for analysis year 2009, there were around 70% non-family firms in the small firm category as opposed around 78% and around 85% in the medium and large firm categories, respectively.

3. FIRM AGE DISTRIBUTION

Firm age is detected through the incorporation dates of firms. The time difference (in years) is calculated between the start date of an analysis year and the incorporation date of a firm. Table-3 displays average firm age in years for each firm category. It appears that larger firms are older in general. For instance, average firm age was around 17 years among large firms in the 2009 sample. However, small and medium sized firms averaged only at around 10 years in 2009. Regarding the family businesses, although small sized family firms tend to be slightly older than small sized non-family firms, the difference disappears in the medium sized firm category. In the large sized firm category, family firms appear to be even slightly younger than non-family firms.

4. INDUSTRIAL DISTRIBUTION

Firm sector is identified by using “Annual Return” documents. Incorporations are required to report which sector(s) they operate in their annual return documents. The UK Standard Industrial Classification of Economic Activities (UK SIC(92))² is used to classify businesses and firms’ primary sector is employed to detect their main industries. Although main sections of SIC92 cover 17 broad industries, the present analysis employs all subsections (60 in total) that are denoted by the first two digits of the 5-digit very detailed SIC92 classifications.

Table-4 displays sector distribution for year 2009 in each firm category by using the first two digits of SIC92 classifications. The table reveals that family businesses tend to be seen more in AGRICULTURE AND FISHING with around 44% of the total firms in that industry (SIC92 code = 01, 02, 05), EXTRACTION OF CRUDE PETROLEUM AND NATURAL GAS; SERVICE ACTIVITIES INCIDENTAL TO OIL AND GAS EXTRACTION with around 38% of the total firms in that industry (SIC92 code = 11), MANUFACTURE OF FOOD PRODUCTS, BEVERAGES with around 35% of the total firms in that industry (SIC92 code = 15), MANUFACTURE OF TEXTILES with around 34% of the total firms in that industry (SIC92 code = 17), MANUFACTURE OF LEATHER AND LEATHER PRODUCTS with around 34% of the total firms in that industry (SIC92 code = 19), MANUFACTURE OF WOOD AND WOOD PRODUCTS with around 34% of the total firms in that industry (SIC92 code = 20), MANUFACTURE OF BASIC METALS with around 33% of the total firms in that industry (SIC92 code = 27), MANUFACTURE OF FABRICATED METAL PRODUCTS with around 34% of the total firms in that industry (SIC92 code = 28), CONSTRUCTION with around 34% of the total firms in that industry (SIC92 code = 45), SALE, MAINTENANCE AND REPAIR OF MOTOR VEHICLES AND MOTORCYCLES with around 36% of the total firms in that industry (SIC92 code = 50), and RETAIL TRADE with around 35% of the total firms in that industry (SIC92 code = 52).

The lowest incidences of family businesses are seen in ELECTRICITY, GAS, STEAM AND HOT WATER SUPPLY with around 21% of the total firms in that

industry (SIC92 code = 40), WATER TRANSPORT with around 20% of the total firms in that industry (SIC92 code = 61), AIR TRANSPORT with around 22% of the total firms in that industry (SIC92 code = 62), POST AND TELECOMMUNICATIONS with around 24% of the total firms in that industry (SIC92 code = 64), FINANCIAL INTERMEDIATION with around 22% of the total firms in that industry (SIC92 code = 65), INSURANCE AND PENSION FUNDING with around 24% of the total firms in that industry (SIC92 code = 66), ACTIVITIES AUXILIARY TO FINANCIAL INTERMEDIATION with around 15% of the total firms in that industry (SIC92 code = 67), RESEARCH AND DEVELOPMENT with around 24% of the total firms in that industry (SIC92 code = 73), EDUCATION with around 24% of the total firms in that industry (SIC92 code = 80), ACTIVITIES OF MEMBERSHIP ORGANISATIONS with around 4% of the total firms in that industry (SIC92 code = 91) and RECREATIONAL, CULTURAL AND SPORTING ACTIVITIES with around 20% of the total firms in that industry (SIC92 code = 92).

Out of around 300,000 family firms detected as of the start of year 2009, around 40,000 firms primarily operated in construction industry accounting for around 13% of all family firms in our sample. Other industries with high numbers of family firms are WHOLESALE (around 5%), RETAIL (around 7%), REAL ESTATE ACTIVITIES (around 8%) and COMPUTER AND RELATED ACTIVITIES (around 7%). Such sectors also have higher stocks of firms in general.

Table-5, Table-6, and Table-7 specifically display the sector distribution among SMALL, MEDIUM and LARGE sized firms, respectively, for each firm category in year 2009. Separate tables for different firm size groups provide similar results as to the industrial distribution of different firm categories. One exception can be stated that in addition to the other previously mentioned sectors, family businesses among LARGE firms also tend to be seen more in LAND TRANSPORT with around 24% of the total firms in that industry (SIC92 code = 60) where average percentage of family firms among LARGE firms in the sample is around 15%.

5. REGIONAL DISTRIBUTION

Firm location is identified through the registered addresses of the incorporations. Such registered addresses are then matched to the UK government office regions, Scotland and Wales. Table-8 displays the regional distribution for each firm category for year 2009. The table reveals that family businesses are distributed evenly among the UK regions (around 30%) with the exception of LONDON where the percentage of family businesses is as low as around 20%. Separate tables for SMALL and MEDIUM sized businesses (Table-9 and Table-10) show similar distributions. However, Table-11 for regional distribution of firm categories among LARGE firms suggests that not only LONDON but YORKSHIRE and SCOTLAND also have lower incidences of family firms compared to the other regions in the UK among LARGE firms.

Out of around 300,000 family firms as of the start of year 2009, around 52,000 firms were registered in SOUTH EAST (around 17% of all family firms in the UK) and around 45,000 firms in LONDON (around 15% of all family firms). Other regions with high numbers of family firms are NORTH WEST (around 11%) and EAST OF ENGLAND (around 11%). Such regions also have a higher stock of registered companies in general.

TABLE 8: REGIONAL DISTRIBUTION - 2009

REGION	Family Firms		Non-family Firms		TOTAL

6. GOVERNANCE

Information related to the board of directors of each firm is gathered as of the start date of each analysis year separately. Board dynamics³ regarding owner management, experience as a director, gender composition, director age, proximity of directors to firms' registered addresses, multiple directorships and recent director turnover are investigated for different firm categories. Table-12 provides the mean (average) values of governance related variables for each firm category as of the start of 2009. Table-13, Table-14, and Table-15 display the averages for different firm size groups, SMALL, MEDIUM and LARGE, separately.

Regarding average age of directors, family firms (around 51 years) tend to have older directors than non-family firms (around 49 years). Average age of directors increases for non-family firms as the firm size increases. However, average age is rather stable for family firms regardless of firm size.

In general, family firm directors tend to be more experienced than non-family firm directors. As firm size grows, the difference in experience between directors of family firms and those of non-family firms disappear. Family firm directors, however, have more industrial directorship experience regardless of the firm size. Furthermore, directors of LARGE firms tend to be more experienced overall regardless of firm category, family or non-family.

Owner-management degree, in general, decreases as firm size increases. Although family firms consistently have a greater owner-managed percentage than non-family firms do, the difference is much greater among LARGE firms. Whereas the values are around 84% for family firms and 56% for non-family firms in the SMALL sized firm group, they become 78% for family firms and 19% for non-family firms in the LARGE sized firm group.

Incidence of female directors decreases as firm size increases (Tables 12, 13, 14, 15). Whereas the percentage of female directors is around 37% among SMALL sized firms,

the percentage drops to around 20% for LARGE firms. Family firms tend to have a greater percentage of female directors (around 44%) than non-family firms (around 32%).

In terms of directors' proximity to businesses, smaller firm directors appear to reside closer to the registered addresses of the businesses than larger firm directors do. Regarding the firm category, family firm directors tend to reside closer to firms than non-family directors do.

Non-family firms appear to have a higher level of multiple directorships of their directors with other firms than family firms do. The figures are also consistent for different firm size groups and for the level of multiple directorships within the same industry.

The extent of recent director turnover increases by firm size among family firms (from SMALL to LARGE) but especially among non-family firms. The extent of past year's director resignations increases from around 4% to around 13% among non-family firms as the firm size increases from SMALL to LARGE. Regarding firm category, family firms appear to have a lower director turnover degree than non-family firms.

7. FINANCIAL INDICATORS

Financial indicators of firms are investigated in four main sub-groups⁴. The first group, working capital (operating) cycle, measures cover factors related to trade credit use, inventories (unsold goods) and the extent of liquid and current assets. The second group, growth potential, covers measures for net worth and retained profits. The third group, profitability, measures consider turnover (sales) and profit related factors. The fourth group, leverage, examines the level of loan capital among firms.

Financial information is gathered from firms' latest filed available annual accounts prior to the start date of each analysis year (2007 to 2009). Hence, each firm in the sample may have different values of financial indicators for each analysis year in a dynamic manner. Since the majority of the measures related to financial performance are presented as ratios, values are not deflated given that both nominator and denominator values would be subject to the same deflation. However, some measures that capture changes in some concepts (e.g. change in net worth) utilize deflation by using the GDP deflator.

As SMALL and MEDIUM sized firms have some exemptions while filing their annual accounts, it is not possible to cover all four financial performance groups for every firm in the sample. Basically, SMALL sized firms are only required to submit "Balance Sheet" whereas MEDIUM sized firms are required to submit an "abridged" form of "Profit and Loss Account" in addition to "Balance Sheet". Hence, the third group and the fourth group, profitability and leverage, are not applicable for SMALL sized firms. Similarly, the fourth group, leverage, is not applicable for MEDIUM sized firms. Further analysis is carried out accordingly.

Tables from 16 to 24 display a detailed investigation of financial indicators among different firm size groups for different firm categories for three analysis years separately.

In summary, regarding working capital cycle (Table-16 to Table-18), SMALL firms tend to have lower current ratio figures, higher net cash to net worth ratios, lower inventory relative to assets and greater use of trade credit. Especially, trade creditors to total liabilities ratio is remarkably higher among SMALL firms. MEDIUM sized firms

appear to have the lowest figures for inventory and trade credit related indicators suggesting a trade credit flow especially between SMALL and LARGE firms. Family firms have lower quick assets to current assets ratios and higher inventory to assets ratios among LARGE firms. Furthermore, family firms appear to be using trade credit more than non-family firms especially among LARGE firms.

Net worth and retained profits to total assets figures increase by firm size (Table-19 to Table-21). Family firms, however, appear to have lower net worth figures in general. But, they also have greater figures for retained profits to total assets indicator among SMALL, MEDIUM and LARGE sized firms. The figures may suggest more profit sharing among shareholders for smaller firms rather than retaining profits for further investment. The same statement may also be argued for non-family firms compared to family firms. Motivation for growth may be different between family and non-family firms.

In terms of profitability, although LARGE sized firms appear to have lower average values for sales to total assets (although median values are higher) or pre-tax profit to total asset than MEDIUM sized firms, they also have greater values for profit margin (Table-22 to Table-23). Family firms have higher figures for return on assets and profit margin than non-family firms both among MEDIUM and LARGE sized firms.

Table-24 provides leverage related measures for LARGE sized firms only as they are not available for smaller sized firms. Figures suggest that family firms are less leveraged than non-family firms even for the short term. However, non-family firms have greater interest coverage ratios than family firms. It appears that although non-family LARGE firms are higher leveraged, they may also be making enough profits to cover their interest payments.

8. INSOLVENCY AND FIRM EXIT

Firms in each firm category and firm size group are tracked against insolvency and non-insolvency related exits (dissolutions) for each analysis year. Table-25 shows the number of corporate insolvencies as well as the insolvency rates for the period 2007 to 2009 for the firms in the sample. In general, corporate insolvency rates in the sample increase during 2009, consistent with the expectation due to the recession. LARGE sized firms appear to have higher insolvency rates (3.54% in 2009) than SMALL sized firms (1.56% in 2009) where MEDIUM sized firms have the lowest figures (0.90% in 2009). Family firms consistently have lower insolvency rates than non-family firms regardless of the firm size.

Table-26 tracks non-insolvency related dissolution for each analysis year from 2007 to 2009. In general, dissolution rate is also higher during 2009 compared to the earlier years. LARGE firms, however, have the lowest dissolution rate as opposed to having the highest insolvency rate. Family firms have lower dissolution rates than non-family firms among SMALL and MEDIUM sized firms. But, the dissolution rates are similar between family and non-family firms among LARGE firms.

It appears that LARGE firms tend to exit through insolvencies rather than non-insolvency related dissolutions. SMALL and MEDIUM sized firms, on the other hand, mostly exit through non-insolvency related closures. Family firms, in general, have lower rates in both exit categories, insolvency and dissolution, than non-family firms.

9. TURNOVER AND NUMBER OF EMPLOYEES

Average turnover and growth in turnover are lower for family firms among LARGE sized firms. However, average turnover of family firms is greater among MEDIUM sized and growth in turnover is only slightly lower than non-family firms.

Average number of employees and average growth in the number of employees are found to be lower for family firms in our sample of MEDIUM and LARGE sized firms (growth in employee numbers is only slightly lower).

TABLE 27: TURNOVER AND NUMBER OF EMPLOYEES– MEDIUM FIRMS- 2009

10. EMPLOYEE WAGES, DIRECTORS EMOLUMENTS AND DIVIDENDS

4,801 LARGE sized firms (265 family businesses) in 2009 form the sample to investigate employee salaries, directors emoluments and dividends payable between family and non-family businesses. Figures for number of employees, wages and salaries, directors emoluments, and dividends payables are gathered from firms' annual accounts that were available as of the start date of 2009.

Table-29 displays average values for wages and salaries per employee, directors emoluments per director and dividends payable for each firm category for 2009. It appears that family businesses pay less to employees but slightly more to directors. Average dividends payable figure, on the other hand, is significantly lower for family businesses consistent with the greater values found for family businesses regarding retained earnings.

TABLE 29: WAGES AND SALARIES, DIRECTORS EMOLUMENTS AND DIVIDENDS - 2009

VARIABLE	YEAR	<u>Family Firms</u>		<u>Non-family Firms</u>		<u>TOTAL</u>	
		No.of Firms	Mean	No.of Firms	Mean	No.of Firms	Mean
Wages and Salaries per EMPLOYEE	2009	265	35,559	4,536	90,915	4,801	87,860
Directors Emoluments per DIRECTOR	2009	265	133,814	4,536	116,230	4,801	117,201
Dividends Payable	2009	265	244,778	4,536	6,410,136	4,801	6,069,828

11. FAMILY TRUST/SETTLEMENT FIRMS

Family firms with family trusts/settlements are separately identified for further investigation. Consequently, three firm categories are classified for this subsection (Table 30-31).

Firm Categories:

A- Non-listed Family Firm without family trust/settlement (FNFT).

B- Non-listed Family Firm with family trust/settlement (FFT).

C- Non-listed Non-family Firm (NF).

Despite the general relatively lower intensity of family firms among large firms, the percentage of family firms with family trusts/settlements increases as the firm size increases. Whereas the percentage of family trust firms is only 0.07% among small firms, it more than doubles and rises up to 0.19% in the large firm category.

Family trust firms tend to be much older even in the large firm category. For instance, in 2009, average age of family trust firms was around 24 years compared to around 11 years of family firms with no family trust among small firms. In the large firm category, family trust firms were around 25 years old in average where non-family firms and family firms with no family trust were around 17 years old in average.

A greater percentage of family firms with family trust/settlements are particularly detected in AGRICULTURE AND FISHING and REAL ESTATE ACTIVITIES. The percentage of family trust firms is the highest in LONDON where NORTH EAST and NORTH WEST have the lowest rates.

Family trust firms (around 55 years) tend to have the oldest directors compared to family firms without trust (51 years) and non-family firms (49 years). Directors of family trust firms tend to be more experienced as a director (also within the particular industry of the firm) than directors of family non-trust firms, which in turn are more experienced than non-family firm directors. In addition, family trust firms have very low values of owner-management degree (around 20%) in all firm size groups, SMALL, MEDIUM and LARGE. Family trust firms

have a director turnover degree higher than family firms but lower than non-family firms regardless of the firm size.

(FNFT) = Non-listed Family Firm without family trust/settlement.

(FFT) = Non-listed Family Firm with family trust/settlement.

(NF) = Non-listed Non-family Firm.

EXPLANATIONS

1- FIRM SIZE DESCRIPTION:

“There are 3 sizes of companies to consider when preparing accounts; small, medium or large. There are thresholds for turnover, balance sheet total (meaning the total of the fixed and current assets) and the average number of employees, which determine whether the company is small or medium-sized. Any companies that do not meet the criteria for small or medium are large companies and will have to prepare and submit full accounts.

A small company can prepare and submit accounts according to special provisions in the Companies Act 2006 and the relevant regulations. This means that they can choose to disclose less information than medium-sized and large companies.

A small company must meet at least two of the following conditions:

- annual turnover must be not more than £6.5 million;
- the balance sheet total must be not more than £3.26 million;
- the average number of employees must be not more than 50.

Small companies do not have to deliver a copy of the directors’ report or the profit and loss account to Companies House. Small companies preparing Companies Act accounts can deliver an abbreviated balance sheet. As with a small company, a medium-sized company is determined by its turnover, balance sheet total (meaning the total of the assets) and average number of employees. A medium-sized company can prepare accounts according to special provisions applicable to medium-sized companies. It can also choose to submit reduced information to Companies House.

To be a medium-sized company, the company must meet at least two of the following conditions:

- annual turnover must be no more than £25.9 million;
- the balance sheet total must be no more than £12.9 million;

- the average number of employees must be no more than 250

Abbreviated accounts of a medium-sized company must include the abbreviated profit and loss account (this must be full if preparing IAS accounts) and the full balance sheet”. <http://www.companieshouse.gov.uk/about/gbhtml/gp2.shtml#ch6>

2- SIC92 DESCRIPTION:

“A Standard Industrial Classification (SIC) was first introduced into the United Kingdom in 1948 for use in classifying business establishments and other statistical units by the type of economic activity in which they are engaged. The classification provides a framework for the collection, tabulation, presentation and analysis of data and its use promotes uniformity. In addition, it can be used for administrative purposes and by non-government bodies as a convenient way of classifying industrial activities into a common structure.

Since 1948 the classification has been revised in 1958, 1968, 1980, 1992 and 1997. Revision is necessary because, over a period of time, new products and the new industries to produce them emerge and shifts of emphasis occur in existing industries. It is not always possible for the system to accommodate such developments and after a period of time updating the classification is the most sensible action.

UK SIC(92) is based exactly on NACE Rev 1 but, where it was thought necessary or helpful, a fifth digit has been added to form subclasses of the NACE Rev 1 four digit classes. Thus, UK SIC(92) is a hierarchical five digit system. However, at the first or highest level of aggregation, unlike the SIC(80) which had 10 divisions, UK SIC(92) is divided into 17 sections, each denoted by a single letter from A to Q. Some sections are, in turn, divided into subsections (each denoted by the addition of a second letter). The letters of the sections or subsections can be uniquely defined by the next breakdown, the divisions (denoted by two digits).

The following table gives a broad comparison between the sections of UK SIC(92) and the former divisions, although the correlation is not exact as relatively minor differences in coverage are ignored”.

http://www.statistics.gov.uk/methods_quality/sic/

UK SIC92 MAIN INDUSTRIAL SECTIONS

- A** AGRICULTURE, HUNTING AND FORESTRY
- B** FISHING
- C** MINING AND QUARRYING
- D** MANUFACTURING
- E** ELECTRICITY, GAS AND WATER SUPPLY
- F** CONSTRUCTION
- G** WHOLESALE AND RETAIL TRADE; REPAIR
OF MOTOR VEHICLES, MOTORCYCLES AND
PERSONAL AND HOUSEHOLD GOODS
- H** HOTELS AND RESTAURANTS
- I** TRANSPORT, STORAGE AND
COMMUNICATION
- J** FINANCIAL INTERMEDIATION
- K** REAL ESTATE, RENTING AND BUSINESS
ACTIVITIES
- L** PUBLIC ADMINISTRATION AND DEFENCE;
COMPULSORY SOCIAL SECURITY
- M** EDUCATION
- N** HEALTH AND SOCIAL WORK
- O** OTHER COMMUNITY, SOCIAL & PERSONAL
SERVICE ACTIVITIES
- P** PRIVATE HOUSEHOLDS WITH EMPLOYED
PERSONS
- Q** EXTRA - TERRITORIAL ORGANISATIONS
AND BODIES

UK SIC92 First Two Digit Descriptions

<u>SIC92 2-digit</u>	<u>Description</u>
01	AGRICULTURE, HUNTING AND RELATED SERVICE ACTIVITIES
02	FORESTRY, LOGGING AND RELATED SERVICE ACTIVITIES
05	FISHING
10	MINING OF COAL AND LIGNITE
11	EXTRACTION OF CRUDE PETROLEUM AND NATURAL GAS
12	MINING OF URANIUM AND THORIUM ORES
13	MINING OF METAL ORES
14	OTHER MINING AND QUARRYING
15	MANUFACTURE OF FOOD PRODUCTS, BEVERAGES
16	MANUFACTURE OF TOBACCO PRODUCTS
17	MANUFACTURE OF TEXTILES
18	MANUFACTURE OF WEARING APPAREL; DRESSING AND DYEING OF FUR
19	MANUFACTURE OF LEATHER AND LEATHER PRODUCTS
20	MANUFACTURE OF WOOD AND WOOD PRODUCTS
21	MANUFACTURE OF PULP, PAPER AND PAPER PRODUCTS
22	PUBLISHING, PRINTING AND REPRODUCTION OF RECORDED MEDIA
23	MANUFACTURE OF COKE, REFINED PETROLEUM PRODUCTS AND NUCLEAR FUEL
24	MANUFACTURE OF CHEMICALS AND CHEMICAL PRODUCTS
25	MANUFACTURE OF RUBBER AND PLASTIC PRODUCTS
26	MANUFACTURE OF OTHER NON-METALLIC MINERAL PRODUCTS
27	MANUFACTURE OF BASIC METALS
28	MANUFACTURE OF FABRICATED METAL PRODUCTS
29	MANUFACTURE OF MACHINERY AND EQUIPMENT
30	MANUFACTURE OF OFFICE MACHINERY AND COMPUTERS
31	MANUFACTURE OF ELECTRICAL MACHINERY AND APPARATUS
32	MANUFACTURE OF RADIO, TELEVISION AND COMMUNICATION EQUIPMENT
33	MANUFACTURE OF MEDICAL, PRECISION AND OPTICAL INSTRUMENTS, ETC.
34	MANUFACTURE OF MOTOR VEHICLES, TRAILERS AND SEMI- TRAILERS
35	MANUFACTURE OF OTHER TRANSPORT EQUIPMENT
36	MANUFACTURE OF FURNITURE, ETC.
37	RECYCLING
40	ELECTRICITY, GAS, STEAM AND HOT WATER SUPPLY
41	COLLECTION, PURIFICATION AND DISTRIBUTION OF WATER

3- VARIABLES REGARDING GOVERNANCE (BOARD DYNAMICS):

All variables are calculated by using the information as of the start date of each analysis year.

Average Age of Directors: Total age of directors in years is divided by the number of directors.

Average Experience: The difference in days between the first ever appointment date of a director and the start date of an analysis year is first calculated. The average is then gathered among all directors of a firm.

Average Experience in the Industry: The difference in days between the first ever appointment date of a director in the firm's particular industry and the start date of an analysis year is first calculated. The average is then gathered among all directors of a firm.

Owner-management Degree: Total number of shares directors have is divided by total number of shares.

Incidence of Female Directors: The number of female directors is divided by the number of directors.

Director Proximity: The number of directors who live in the same "county" is divided by the number of directors.

Multiple Directorships: Total number of current directorships of all directors of a firm is divided by the number of directors.

Multiple Directorships in the Industry: Total number of current directorships of all directors in a firm's particular industry is divided by the number of directors.

Recent Director Turnover: The number of past year's director resignations is divided by the number of directors as of the start date of past year.

Changes in variables: % change = [(this year - last year)/last year]

4- FINANCIAL PERFORMANCE RELATED MEASURES:

Working Capital Cycle Measures:

- Current Assets/Current Liabilities
- Inventory/Working Capital
- Net Cash/Net Worth
- Inventory/Total Assets
- Quick Assets/Current Assets
- Inventory/Current Assets
- Trade Debtors/Total Assets
- Trade Creditors/Total Liabilities
- Trade Creditors/Trade Debtors

Growth Potential:

- Net Worth
- Change in Net Worth (%)
- Retained Profits/Total Assets

Profitability:

- Sales/Total Assets
- Pre-tax Profit/Sales
- Pre-tax Profit/Total Liabilities
- Change in Pre-tax Profit (%)
- Pre-tax Profit/Total Assets

Leverage:

- Operating Profit/Interest Payments
- Total Debt/Total Assets
- Total Debt/Net Worth
- Bank Overdraft and Short Term Loans/Current Assets
