PREFACE

The present issue of the Mineral Industries Map and accompanying Directory of Illinois Mineral Operators is a revision of the first map and directory published in 1920. It represents a compilation of data taken from correspondence with the mineral operators themselves, from the files of the Illinois State Geological Survey, and from the reports of individual members of the Survey Staff.

The demands for the first map and directory, from mineral operators and those interested in the mineral industries of Illinois, were so numerous that a revision at this time was deemed advisable and necessary in order to make available the most recent and accurate information regarding that portion of Illinois's industry which depends on the mineral resources of the State for its maintenance.

The work of revision was assigned to Henrietta P. Christensen who initiated the collection of information from the operators and the compilation of the material for the directory and the map. Since she was unable to finish the work before she gave up her connection with the Survey, it was completed and finally checked by her successor, Elizabeth Erb.

It has been the aim of those responsible for the data contained on the map and in the directory to give exact information concerning all mineral operators in the State and their industries. The impossibility of attaining absolute perfection in a piece of work possessing the scope of the present publication can be readily appreciated, but it is believed that errors have been reduced to the minimum.

January 1, 1927.

M. M. LEIGHTON, *Chief*.

DIRECTORY OF ILLINOIS MINERAL OPERATORS JANUARY 1, 1927

INTRODUCTION

This directory, supplementing the Mineral Industries Map, contains three lists of mineral operators. The first gives the names of the operators in alphabetical order, and the commodities which they produce. It serves as a cross index when only the name of an operator is known. In the second list the names of the operators are arranged alphabetically according to commodity. The list includes also the main office address of each operator; the post office address of the plant, pit, mine, or quarry; the means of transportation; and the county and reference number by which the location on the map may be found. The third list is arranged numerically by counties. It serves as a cross index when a location, but not the name of the operator, is known.

Specific examples may be taken to illustrate the use of the directory and map. (1) If information is desired regarding the sand and gravel pit in Madison County indicated on the map by the green triangle numbered 15, reference to List III (page 64) shows that the operator is the Stocker Gravel and Construction Company; by referring to that name in the alphabetical list of sand and gravel producers (page 55) the remainder of the data on this company and pit may be obtained. (2) If, on the other hand, the location of the Stocker Gravel and Construction Company's pit is desired, reference to List II under sand and gravel for construction purposes and roads, shows the county and reference number to be Madison 15; on the map the symbol in Madison County numbered 15 indicates the location of the pit. (3) If only the name of a producer is known, as, for instance, Bauer-Johnson and Company, reference to List I (page 7) shows that this operator produces limestone. Opposite the name, Bauer-Johnson and Company, in the alphabetical list of limestone producers (page 48) further information is given regarding the quarry.

Changes in ownership of the mineral industries are so numerous and frequent that new editions of this directory are necessary from time to time in order to keep the information up to date. Revisions, corrections of possible errors, and suggestions for improvement will be greatly appreciated and, so far as possible, incorporated in later editions of both map and directory.

To all of those companies and individuals who lent their co-operation by complying with requests for information, the Survey extends its thanks.
