SEA AND INLAND FISHERIES OF IRELAND, 1902.

REPORT

TO THE

SECRETARY OF THE DEPARTMENT OF AGRICULTURE
AND TECHNICAL INSTRUCTION FOR IRELAND.

SIR,

I have the honour to submit Part I. of the Report for the year 1902 on the Sea and Inland Fisheries of Ireland.

PART I.—GENERAL REPORT.

GENERAL OBSERVATIONS.

The year 1902, so far as the sea fisheries are concerned, was to a certain extent unsatisfactory, the catch being over 22 per cent. less than that of the previous year. The total value was, however, over 5 per cent. greater. This increase of value can be accounted for partly by the shortage of supply; but the improved facilities for delivering fresh fish all over the country is without doubt increasing the area of demand.

The number of men engaged in sea fishing shows a decline; and the reasons for this I have treated of on p. viii. of this Report. Many of them are of a purely temporary character.

The improvement shown in the spring mackerel fishery of 1901 was not maintained in 1902. The autumn mackerel did not come in until very late; and the high prices then paid did much to relieve the west coast fishermen from the effects of the bad season. The demand in America was excellent; and the improvements in curing on the Irish coast led to the highest prices being reached. From 20 to 25 dollars a barrel were paid, where from 10 to 12 dollars could only be obtained a few years ago.

The storms which began early in December, and continued all through the winter, brought all fishing except that of the most powerful vessels to a close.

The herring fishery on the north coast showed some important changes, amongst them being the complete failure of the fishing in Trawenagh Bay, County Donegal, where so many thousands of pounds have been earned by the local people during the last few years.

The reputation of the Downing's Bay herrings has been well maintained in the markets of the world. Those cured in Donegal and sent to America and to Germany fetched higher prices than herrings from any other country. The British Consul-General in New York reports:—"The summer cured herring, both from Scotland and Ireland, were of very good quality. Those from Downing's Bay were particularly fine."

The general take of prime fish was excellent, the local steam trawlers keeping up a good supply to the Dublin market. The amount of soles landed shows a considerable increase; but notwithstanding this the average price rose from £3 7s. 2½*d.* per cwt. in 1901 to £4 0s. 5¾*d.* in 1902. These facts, considering that the capturing power remained practically the same in both years, must be largely accounted for by a decline in the supply of this valuable fish from the other fishing grounds of the British Islands.

Off the west coast immense takes of hake were made, during the spring months, by fleets of steam trawlers. As these fish were almost all landed either in Milford or Fleetwood they go to swell the statistics of fish landed in England, and do not appear in our returns.

The scare in the oyster trade has made itself felt in the oyster fisheries, but not to the same extent as in England, owing to the immunity from pollution of the principal beds in the West of Ireland. Some of the valuable public beds have been endangered by illegal and reckless fishing, and the Department, on my recommendation, thought it well to support the efforts of the Royal Irish Constabulary at Tralee by appointing a special bailiff to watch the beds in that district. The results were highly satisfactory.

Our experiments in oyster culture, which have been going on on a large scale, will be dealt with by Mr. Holt, the Scientific Adviser to this Branch, in Part II. of this Report.

A considerable development took place in the lobster fisheries this year owing to greater competition in the buying and the use of ice in the packing. On the Kerry coast the price of lobsters rose from 4s. 6*d.* per dozen, as in former years, to 8s., and in some cases to as high as 13s. per dozen—the capture being also fairly good. A similar improvement was experienced all over the west coast. This is highly satisfactory when it is remembered that the lobster fishing provides the most continuous employment to the coast population, and that as the plant is inexpensive and usually made by the men themselves, it comes within the reach of the poorest class of fishermen.

Instruction in mounting, mending, and barking herring nets was given at Ballynagaul, Co. Waterford; Giles Quay, Co. Louth, and Port Ballantrae, Co. Antrim. At Ballynagaul a barking pan was erected capable of dealing with the longest train of nets. At Port Ballantrae the instructor accompanied a local crew to the Downing's Bay fishery, where his efforts had the effect of making their experiment a profitable one.

I have referred on page xxii. to the marine works in respect of which the Department have offered contributions.

The salmon fishery showed a great improvement, particularly during the peal season; the amount carried by the railways indicated an increase of about 30 per cent. over the previous year.

The output from the hatcheries was about 60 per cent. greater than in any previous year.

As usual, a number of public inquiries were held by Mr. Lane and myself in different parts of Ireland, with the result that several bylaws were submitted to the Lord Lieutenant in Council for approval, and are now in operation. The most important of these relate to steam trawling off the east coast, the use of snap nets in the River Maigue, and the use of drift nets in the estuary of the River Slaney.

One of the most important of these inquiries was that held at the request of the Limerick Board of Conservators into the working of the stake weirs in the estuary of the Shannon. On careful consideration of the evidence, and after inspection, we did not see our way to recommend any change in the existing regulations affecting these engines.

In the Burren oyster district of Co. Clare a licence for an extensive oyster bed was granted.

During the year under review the Report of the Board of Trade Committee on Ichthyological Research, of which I was a member, was issued. Amongst the recommendations was one referring to the establishment of a conference consisting of representatives of the central fishery authorities for England, Ireland, and Scotland, which should sit periodically, and determine the course of scientific investigations, so that all observations should be co-relative and part of a well-considered scheme. Soon after we commenced our sittings the Government subsidised the Marine Biological Association, whose central establishment is at Plymouth, for the purpose of carrying out certain marine observations in conjunction with other countries situated around the North Sea. These investigations are established, however, for only three years, of which one has now passed. They will, no doubt, throw much light on the comparative values of various methods of scientific research, and the Reports of the investigations will be looked forward to with much interest.

THE SEA FISHERIES.

Vessels, Men, and Boys.

There were 6,245 vessels actually engaged in the sea fisheries in 1902, as compared with 6,561 in 1901, showing a decrease of 316.

This year's figures are composed of 366 first, 2,958 second,* and 2,921 third* class boats; and the net falling off above-mentioned results from an increase of 13 in the first class, but decreases of 73 and 256 respectively in the other classes.

There were 23,943 men and 584 boys employed, being 1,397 men and 238 boys less than in the previous year.

While there have been, as usual, fluctuations in the number of men and boats that actually took part in the fishing, a series of circumstances in 1902 combined to show a serious reduction by the number of boats that lay up, compared with increases that took place by the acquisition of new and larger craft in some districts. In 1900 and 1901 there was on the S. W. coast a falling off in the autumn mackerel fishery, and as a consequence, a considerable number of canoes did not fit out in 1902. On the Donegal coast, while the general herring fishing was very good, there was a great collapse of the fishing in Trawenagh Bay. This bay forms a large shallow lagoon at high water, with a very narrow opening to the sea, protected by a bar of sand on which a dangerous sea breaks in stormy weather. For four years immense shoals of herrings came to this bay, in the late autumn, to spawn, but in 1902 they went elsewhere. During the years when the fishing was good, the small farmers around the bay provided themselves with row-boats, and at a trifling outlay on material reaped a rich harvest. Some of these crews earned hundreds of pounds in a season. In 1902 the greater part of these boats, numbering close on fifty, had to lie idle. A case of a similar nature occurred in Clew Bay. The herrings failed to turn up when expected, and the farmers who only fish when they are sure that a quantity of fish are close at hand, employed themselves on estate improvement works under the Congested Districts Board, or in some other way; and consequently about fifty row-boats are returned as not having fished. In the Achill district also the lack of herrings on that coast caused many of the men who went to work in England to stay there, who would have returned home had the fishing been flourishing.

Every year a number of old boats are struck off the registers as worn out. These are, as a rule, balanced by the new boats built. In 1902 an unusually large number of boats were thus struck off, and this, combined with the events above referred to, will explain the falling off in this year's figures.

The regulations made for the lettering, numbering, and registering of British sea-fishing boats under the provisions of the Sea Fisheries Act, 1868, and the Sea Fisheries Act, 1883,

* Include 25 and 47 unclassified boats that would have been, before the passing of the Order in Council which came into force on 1st May, 1902, classed as "second" and "third," respectively.

were altered by Order in Council dated 24th March, 1902, which came into operation on the 1st May, 1902. Under it boats are now divided as follows:—

- 1st Class, which shall include all steamers of 15 tons gross tonnage and upwards, and all boats (other than steamers) of 15 tons register tonnage and upwards.
- 2nd Class, which shall include all steamers of less than 15 tons gross tonnage and all boats (other than steamers) of less than 15 tons register tonnage or of 18 feet keel and upwards.
- 3rd Class, which shall include all boats under 18 feet keel, other than those navigated by oars only and marked in accordance with Section 176 of the Customs Consolidation Act, 1876.*

Provided that in the case of canoes or other boats built without keels the measurement shall be made from stem to stern over all.

The regulations, however, do not apply to—

- (a.) Yachts or pleasure boats not used for catching fish for profit;
- (b.) Pilot boats, also used as fishing boats, and marked and numbered in accordance with a law or regulation requiring the same to be so marked and numbered; and
- (c.) Open and undecked boats navigated by oars only, if such boats are otherwise marked in accordance with Section 176 of the Customs Consolidation Act, 1876. (The expression "undecked boats" shall mean boats not sufficiently decked to afford any sleeping accommodation.)
- (d.) Such boats employed in fishing and dredging for scientific purposes as may be exempted by the Board of Trade.

Beam trawling was carried on by 1 steam and 167 sailing boats. Otter trawling was carried on by 10 steam, and 219 sailing boats. Of the steamers, one is 66 tons, two are 63 tons, three are 48 tons, one is 47 tons, one is 21 tons, one is 20 tons, one is 10 tons, and one is 9 tons, net register. Of the sailing trawlers 256 were under 10 tons, 46 between 10 and 20 tons, 45 between 20 and 30 tons, 16 between 30 and 40 tons, 18 between 40 and 50 tons, and 5 over 50 tons.

There were 1,442 men and 33 boys engaged in trawling.

Fishing by long lines was carried on by 5,755 men and 84 boys, in 51 first class, 852 second class, and 577 third class boats.

* The Customs Consolidation Act, 1876, Section 176, requires all vessels and boats under 100 tons to have the name of the owner and of the port painted outside the stern, but this does not apply to boats registered as fishing boats.

About 913 persons were engaged gathering oysters off the public beds.

About 4,321 persons were engaged at the lobster and crab fisheries.

About 398 persons were engaged picking mussels, 213 picking cockles, and 3,735 in gathering periwinkles.

Further details are given in the Appendices.

The number of boats engaged in the mackerel and herring fisheries, are referred to on pages xv., xvi., and xviii., and in Appendices Nos. 5 and 6.

There were 42 first class, 618 second class, 549 third class, and 6 unclassified boats that did not fish during the year.

Six first class boats from Arklow, attended the Scotch herring fishery ; and three first class boats from Rush attended the long line fishing in Scotland.

The Isle of Man boats which attend the Irish spring mackerel fishery are, to a considerable extent, manned by Irish fishermen, who join the boats at the Isle of Man, and assist in fitting them out.

Review of Statistics of Fish (excluding Salmon) Landed.

According to the returns received, the total quantity of sea fish (other than shell fish) captured in 1902 was 634,016 cwts., valued at £334,783. In 1901 the corresponding figures were 818,013 cwts. and £318,173. The former, therefore, show a decrease in capture of 183,997 cwts., but an increase of 16,610 in money.

The following figures will show at a glance a comparison of the takes on the different coasts during the two years:—

| — | | Cwts. | Value. |
|--------------|-------|---------|---------|
| | | | £ |
| North Coast, | 1902, | 74,087 | 39,273 |
| " | 1901, | 142,396 | 38,909 |
| East Coast, | 1902, | 189,026 | 108,801 |
| " | 1901, | 160,891 | 94,078 |
| South Coast, | 1902, | 197,953 | 81,683 |
| " | 1901, | 274,962 | 86,414 |
| West Coast, | 1902, | 172,950 | 105,026 |
| " | 1901, | 239,764 | 98,772 |

The mackerel and herring being the most important of our sea fisheries, I make some special observations regarding them later on.

The following is a comparison between this year and 1901 in respect to quantities, values, and average prices of the different kinds of sea fish landed in Ireland:—

The average price per cwt. of the total catch in 1902 was about 10s. 6½*d.*, as compared with 7s. 9½*d.* in the previous year.

Including shell-fish, the total value for 1902 was £402,013, and for 1901, £374,109.

Turbot.—The total capture of turbot in 1902 was 1,081 cwts. valued at £3,964, as compared with 1,205 cwts., valued at £3,800 in 1901.

The average price in 1902 was £3 13s. 4*d.* per cwt., and in 1901 £3 3s. 0¾*d.* per cwt.

Soles.—The total capture of soles in 1902 was 4,053 cwts., valued at £16,311, as compared with 3,239 cwts., valued at £10,882, in 1901.

The average price in 1902 was about £4 0s. 5¾*d.* per cwt., and in 1901 £3 7s. 2¼*d.* per cwt.

Herrings.—The total capture of herrings in 1902 was 241,872 cwts., valued at £93,304.

In the previous year the total capture was 347,605 cwts., and the total value £97,868.

The average price in 1902 was about 7s. 8½*d.* per cwt., and in 1901 about 5s. 7½*d.* per cwt.

Cod.—The total capture of cod in 1902 was 14,855 cwts., valued at £11,496, as compared with 22,561 cwts., valued at £15,963, in 1901.

The average price per cwt. in 1902 was about 15s. 5½*d.*, and in 1901 about 14s. 1¾*d.*

Ling.—The total capture of ling in 1902 was 5,623 cwts., valued at £2,858, as compared with 9,847 cwts., valued at £4,952, in 1901.

The average price per cwt. in 1902 was about 10s. 1¾*d.*, and in 1901 about 10s. 0¾*d.*

Haddock.—The total capture of haddock in 1902 was 7,085 cwts., valued at £8,306.

In the previous year the total capture was 9,556 cwts., and the total value £10,011.

The average price in 1902 was about £1 3s. 5½*d.* per cwt., and in 1901 about £1 0s. 11¼*d.*

Whiting.—The total capture of whiting in 1902 was 23,019 cwts., valued at £13,356, as compared with 13,827 cwts., valued at £9,471, in 1901.

The average price per cwt. in 1902 was about 11s. 7¼*d.*, and in 1901 about 13s. 8½*d.*

Sprats.—The total capture of sprats in 1902 was 5,934 cwts. valued at £812.

In the previous year the total capture was 6,794 cwts., valued at £1,077.

The average price per cwt. in 1902 was about 2s. 8½*d.*, and in 1901 about 3s. 2*d.*

Mackerel.—The total capture of mackerel in 1902 was 243,004 cwts., valued at £121,270.

In the previous year the total capture was 339,253 cwts., valued at £116,052.

The average price per cwt. in 1902 was about 9s. 11¾*d.*, and in 1901 about 6s. 10*d.*

Hake.—The total capture of hake in 1902 was 18,906 cwts., valued at £14,247, as compared with 12,884 cwts., valued at £9,952 in 1901.

The average price per cwt. in 1902 was about 15s. 0¾*d.*, and in 1901 about 15s. 5½*d.*

Other kinds (not shell fish).—The total capture in 1902 was 68,584 cwts., valued at £48,859, as compared with 51,242 cwts., valued at £38,145, in 1901.

The average price per cwt. in 1902 was about 14s. 2¼*d.*, and in 1901 about 14s. 10½*d.*

Shell Fish.

Oysters.—It is estimated that about 38,837 hundreds of oysters were taken off the public beds in 1902, and that the value thereof was £6,977. The figures for the previous year were 37,446 hundreds, and £5,359.

From the private beds, so far as returns are obtainable, about 23,614 hundreds of oysters were lifted. The value of these is estimated at £5,378. The figures for the previous year were 29,651 hundreds, and £5,668.

See also Appendices Nos. 12, p. 67, and 19, p. 100.

Lobsters.—It is estimated that about 115,684 dozens of lobsters were captured in 1902, and that their value was £42,761. The figures for the previous year were 88,798 dozens, and £31,040.

See also Appendix No. 9, p. 58.

Crabs.—It is estimated that about 31,319 dozens of crabs were taken in 1902, and that their value was about £2,193. The figures for the previous year were 33,896 dozens, and £2,875.

See also Appendix No. 10, p. 62.

Mussels.—It is estimated that the weight of the mussels taken this year was about 1,723½ tons, and that the value thereof was about £2,243. The previous year's figures were 2,421 tons, and £2,664.

See also Appendix No. 13, p. 70.

Cockles.—It is estimated that about 30,562 gallons of cockles were picked in 1902, and that their value was about £885. The figures for the previous year were 48,854 gallons, and £1,274.

See also Appendix No. 14, p. 71.

Periwinkles.—It is estimated that the weight of periwinkles taken this year was somewhere about 1,625 tons, and that the value thereof was £6,608. The figures for the previous year were 1,745½ tons and £6,843.

See also Appendix No. 15, p. 72.

Shrimps.—Shrimping is not largely followed around the Irish coast. The cases mentioned in Appendix No. 11, page 66, are the only ones in which reports came to hand that shrimps had been taken. It is estimated that the value was about £185. The figure for the previous year was £213.

The total value of the shell fish, as furnished in the returns for 1902, is estimated at £67,230, as against £55,936 for 1901.

Spring Mackerel Fishery.

The spring mackerel fishing of 1902 was the worst for many years—the take being only about one-half that of 1901 (see Appendix No. 3, p. 10). Prices were, fortunately, high; so that while the falling off in the capture was about 42 per cent., the amount of money realised was only 26 per cent. below that of the previous year.

In looking through the details of such a disappointing season it is satisfactory to note that, at the Port of Kinsale, the take (43,135 cwts.) was about 6,400 cwts. more, and the money realised (£16,094) £4,296 more than in 1901.

As the season advanced it began to be recognised that off Baltimore and Kinsale lay the best supply of fish. The boats consequently concentrated at these places.

At Fenit there was good fishing for a few days in April, when twenty-two steam-drifters brought in large catches; but, on the whole west coast of Ireland, the spring mackerel fishing was a failure. The weather was abnormal, wintry cold extending right into June; and the general impression was that the low temperature inshore prevented the spawning fish from coming within reach of the fishing craft.

A system of telegraphic intelligence between the most important of the fishing centres was established by the Fisheries Branch of the Department this year, whereby telegrams were exchanged (a) on every Monday morning, giving particulars as to the number of boxes of mackerel landed during the preceding week, the average number of boats fishing each day, and the number of days on which the weather was favourable to fishing; and (b) at mid-week, giving information as to whether the fishing and the weather conditions were good or not.

The telegrams were posted up by the Coast Guard in suitable frames erected by the Department at the selected centres; and the information made public in this manner was eagerly sought for, and was much appreciated.

Taking the stations in detail the following facts may be noted:—

At *Kinsale* the fishing lasted for eleven weeks, commencing during the week of April 19th. During these eleven weeks there were forty-four favourable fishing days. The number of boats increased from about eighty, at the commencement, to 105 at the latter end of May. The best week was that of May 10th, when eighty boats, fishing on five days, caught 11,057 boxes; an average of 27·6 boxes per boat per day.

At *Baltimore*, the season lasted longer than at any other station, commencing during the week of April 19th, and continuing for thirteen weeks, there being forty-nine favourable fishing days in this period. Here the best week was June 14th, when sixty-five boats on six days caught 8,245 boxes, an average of 21·1 boxes per boat per day. On the week of May 10th this average was exceeded, being 23·1 with sixty boats. Throughout the season the number of boats did not vary much at this station.

At *Castletownberehaven* a marked falling off in the fishery as compared with former years is to be recorded. No railway facilities exist, the consequence being that the healthy competition of small local buyers is impossible, and buying is confined to the wealthy companies that can afford to despatch their fish by special steamers direct to the English markets.

The season lasted only seven weeks, commencing on that of April 26th. There were twenty-three favourable fishing days. The average number of boats employed was about twenty-five, the best week being that of May 24th, when thirty-two boats on five days caught 3,725 boxes; an average of 23·3 boxes per boat per day. On the previous week the average for a smaller number of boats was as high as 39·3—the largest average catch at any of the stations during the season.

At *Valentia* the season lasted ten weeks, commencing during that of April 26th. The favourable days were thirty-two. The number of boats fishing steadily increased from twenty-six at the start, to sixty on June 7th, largely owing to desertions from *Fenit*. The best week was that of May 24th, when thirty-six boats, on five days, landed 4,460 boxes; an average of 24·8 boxes per boat per day. As at *Castletownberehaven*, the preceding week was marked by a higher average per boat per day, (*viz.*, 33·9), thirty-seven boats on three days landing 3,764 boxes.

At *Fenit*, in spite of its exceptional facilities for the despatch of fish, the record is most disappointing. The season commenced during the week of April 19th, and lasted eight weeks, the favourable fishing days being twenty-seven. Nearly 100 boats, including many steam-drifters, assembled there when the season began, but their numbers steadily decreased to

forty-four on May 31st, owing entirely to want of fish in paying quantities. The best week was that of April 26th, when ninety-nine boats on four days caught 4,923 boxes, an average of 12·4 boxes per boat per day. During the season this average never exceeded 18·6.

At *Aran Island* the fishing was a failure. Such as it was it commenced during the week of April 26th, and lasted spasmodically for eight weeks, the last being that of May 24th, when 1,303 boxes were landed by thirty-one boats on four days; an average of only 10·5. The number of boats never exceeded forty.

The following are the numbers of Irish boats engaged in the Spring Mackerel Fishery in 1902: -

| | |
|-------------------------|-----|
| 1st Class, | 223 |
| 2nd „ | 339 |
| 3rd „ | 762 |
| Unregistered, | 8 |
| Unclassed, | 14 |

The following are the approximate numbers of boats belonging to other nationalities engaged: -

| | |
|--------------------|-----|
| English, | 30 |
| Scotch, | 3 |
| Manx, | 116 |
| French, | 83 |

Most of the thirty-three English and Scotch vessels were steam drifters. See also Appendix No. 3, p. 10.

Autumn Mackerel Fishery.

The mackerel curing business, after a period of depression, has for the last two years been on the ascending scale. The season opened with a disappointing scarceness of fish, and fears were entertained that another bad harvest season had come for the fishermen; but quite late an improvement set in which lasted until the storms of Christmas-time brought the fishing to an end. The result was that the total earnings of the fishermen out of the autumn season were nearly double those of 1901, which year was better than 1900. On the Dingle promontory alone the fishermen received nearly £17,000 for the take. At Kinsale the prices paid were so good that, though there was a smaller amount of fish landed, the cash received was about 20 per cent. more than in 1901. Passing northwards along the west coast, the Co. Clare fishing was successful, £1,540 being earned at one centre alone, where only £462 had been secured in 1901. In the Aran Islands the improvement was on the same scale; but the best of all these western stations was Cleggan, Co. Galway, where brisk buying went on, and £3,425 was earned in the late months of the season.

The prices in America, where all the cured fish was despatched to, were favourable; and it is probable that increased preparations will be made for the coming autumn mackerel fishery.

From some points where railway communication is convenient a considerable amount of mackerel was sent fresh to home markets. At Kinsale about one-quarter of the total catch was thus disposed of.

It is difficult to estimate the earnings of the fishermen's families in curing the fish; but it is probable that the receipts of men, women, and boys thus employed amounted to about £25,000, while the total amount paid to the fishermen for the fish was, in 1902, £59,428.

The following are the numbers of Irish boats attending this fishery in 1902:—

Summer Herring Fishery.

In this Report I deal with the Irish herring fishery under its two main divisions, known as the "summer" and the "autumn and winter" seasons. These names, although in general use, do not accurately describe the periods of fishing. By "summer" herrings are meant the schools of fish which begin to congregate off certain portions of the ocean coasts in April, and possibly move into the Channel later in the season. These herrings have for many years been fished for off South Cork in the month of May, and during the last two years have been found in paying quantities off the Donegal coast. The fishing in the Irish Sea in June and July has always been looked on as a result of an immigration from the ocean. There are difficulties in accepting this theory, the Channel herrings being, as a rule, of smaller size than the ocean herrings which are caught in the earlier months.

When the large schools come on the ocean coasts in April they are of mixed quality; but a preponderance of very poor fish renders them unsuitable for curing. They quickly mend, and a fine fishery is usually prosecuted in May—those cured on the north coast of Donegal in that month being bought by curers at high prices.

At Dunmore East a number of Scotch, Manx, and Irish boats congregated for the spring fishing, and 13,270 cwts. were landed, chiefly in May.

Kinsale did not do as well as in former years.

On the Donegal coast, where the spring fishing was practically a new venture (started in 1900) 16,213 cwts. were landed, for which the fishermen received £7,995. Owing to their superior quality, the prices obtained were much higher than in the south. The chief centre of this fishing was Downing's Bay, in Sheep-haven. Some Scotch boats were engaged by the curers, and a number of local boats fished. In the week ending June 7th the fishing was thought to have closed. No boats went out, and the unengaged Scotch boats left for home. Two days afterwards however some of the boats again shot their nets, with good results, one of them taking 40 crans, which sold for £4 6s. 3d. per cran.

Fishing was also carried on from Lough Swilly by 25 Scotch sailing boats and 3 steam drifters, the fish being landed at Buncrana, where 600 barrels were cured, and about 600 barrels sent fresh, *via* Derry, to Glasgow.

In June considerable sign of herring was seen off Keel, in Achill, but the presence of porpoises deterred the fishermen from shooting their nets.

At Howth there was no herring fishing until June 17th.

Off Kerry, in March and April, some herrings were caught. About half was sent, *via* Dublin, to English markets.

At the Aran Islands.—There was a good herring fishing carried on in the early months, and also in June and July. The fishing was heaviest in February, and was, no doubt, a prolongation of the autumn fishery, which extended on after Christmas.

At the Head of Donegal Bay.—About 1,800 cwts. of herrings were caught by the local boats, the greatest takes being in March, at Bunatroom. At the same time there was a good fishing at Malinbeg, near the northern headland of Donegal Bay.

See also Appendix No. 5, page 20.

Autumn and Winter Herring Fishery.

The greatest amount of herrings landed at any place in the autumn of 1902 was 17,792 cwt., at Downing's Bay, in Donegal; and curers paid therefor to the fishermen the sum of £11,208. At Burtonport, also in Donegal, a large fishing took place, and over 5,000 barrels were cured, besides a large number of herrings that were kippered and despatched in boxes to market. In this region the fishery at Trawenagh Bay, which had proved most successful for a few years, was a total failure; and the boats and gear that had been obtained for it lay idle. This, however, was no more than might have been expected; as a concentration of herring into a great shallow lagoon like Trawenagh Bay can never be looked upon as a permanent state of affairs. The fishing a little further south, however—in Loughrosmore Bay—was successful.

On the east coast, the Howth herring fishery was prosecuted with considerable success, 8,377 cwts. having been landed. It was at its height in August. At Ardglass a still better fishing took place. There are thus indications of a return of the prosperity which the herring fishery brought to these ports in days gone by. Later in the year an increase of herrings took place on the Wexford coast, and in November a good fishing was in progress which was only stopped by stormy weather.

At Dunmore a fleet of fifty-five boats assembled for the herring fishing; but the return was poor compared with what it was in previous recent years.

In Bantry Bay a good sign of herring appeared for a short time, and resulted in a capture of over 6,000 cwts., nearly all of which was despatched fresh to the markets *via* Bantry.

At the Aran Islands a very good class of herrings appeared late in the autumn, and 2,914 cwts. captured fetched about £1,000; while at the head of Galway Bay 9,832 cwt. were landed, over £3,000 being paid on the quays of Galway. An immense quantity of sprats visited Galway in October, when the herring fishing was at its height.

Most of the autumn and winter herring fishing of 1902, was carried on by Irish large decked boats, row boats, or canoes, as will be seen on reference to Appendix No. 6, p. 24; the exceptions being that at Howth a small fleet of Cornish boats took part in the operations, and some Scotch boats worked from Ardglass. The fleet fishing at Downing's Bay consisted of eighty large boats, of which 47 were Scotch, five were Manx, and the remainder Irish.

The cured herrings despatched from Downing's Bay fetched the highest prices in America and Germany.

16 English, 30 Manx, and 47 Scotch boats attended the autumn and winter herring fishery off the Irish coasts.

Loans.

There were received during the year 109 applications, from 134 persons, for loans amounting to £3,462 15s. 5d. Of these there were recommended 97 loans to 121 persons, to the amount of £2,530 13s. 8d. The sum actually issued during the year was £2,516 16s. 8d.

Since the passing of the Purchase of Land and Congested Districts (Ireland) Act, 1891, under which a sum of £20,000 was reserved for administration in non-congested districts (which fund has been placed at the disposal of the Department by the Act 62 and 63 Vic., cap. 50), the sum of £29,327 14s. 3d. was advanced by way of loan up to the 31st December, 1902. The promissory notes signed to secure principal and interest amounted to £31,602 4s. 0d. The repayments were £24,235 3s. 3d.; the outstanding notes not arrived at maturity, £6,722 12s. 8d. The arrears on the £31,602 4s. 0d. consisted of £644 8s. 1d., of

which £100 5s. 6d. are irrecoverable. It will be thus seen that the *bad debts* are only about 6s. 4d. per £100.

On 31st December, 1902, the Fund stood thus:—

| | £ | s. | d. |
|---|--------|----|----|
| Government Stock, | 14,000 | 0 | 0 |
| Cash, | 6,950 | 19 | 2 |
| Outstanding Promissory Notes not arrived at maturity, | 6,722 | 12 | 8 |
| Arrears (excluding £100 5s. 6d. irrecoverable), | 544 | 2 | 7 |

The increase in the amount of arrears is mainly due to extensions of time for the repayment of instalments having been granted in some districts where the fishing was bad or where damage had been done to boats and gear by stormy weather.

Further particulars in connection with these loan transactions will be found in Appendix No. 16, pages 74-77

Casualties.

The number of fishermen who lost their lives, in the year ended 30th September, 1902, while actually in pursuit of their calling was nineteen, as compared with eight in the previous year. Three were drowned while conveying seaweed, provisions, materials, &c., and when engaged in work not immediately connected with fishing. There were no casualties of that nature last year.

Six first, eleven second, and five third class boats were lost this year while engaged in fishing, as compared with one first three second, and two third class, respectively, in the previous year. One first-class boat and one second-class were seriously damaged in both years. A first-class and a third-class were wrecked when engaged in work not immediately connected with fishing.

The following are the particulars of the Casualties, as furnished by the Coast Guard Officers at the various Stations:—

From Howth Station.—A first-class boat foundered in the gale of the 12th November, 1901. The crew, consisting of seven men and one boy, were lost. On the 27th May, 1902, a first-class fishing boat from Howth, whilst running for shelter to Dungarvan harbour went the wrong side of the lighted buoy, struck a wrecked vessel, and sank immediately. The crew were taken from the rigging by the Ballinacourty Coastguard boat. The nets of the fishing craft were recovered, but the boat itself was totally lost.

From Ringsend Station.—A steam trawler foundered off the Kish Light Ship on the 14th June, 1902. The crew were picked up by the mail boat and landed at Kingstown.

From Kingstown Station.—Three vessels of the first, second, and third-classes, respectively, were totally destroyed in Kingstown harbour by the gale of the 12th November, 1901.

From Wexford Station.—About the middle of April, 1902, a second-class vessel struck a sunken anchor at the entrance to Wexford harbour, and sank. The crew were landed by the life boat.

From Youghal Station.—A second-class boat was blown to sea in December, 1901, and has not been heard of since.

From Upper Cove Station.—A first-class boat was wrecked on the Farmer Rocks, at the entrance to Kinsale Harbour, during a dense fog, on the 6th March, 1902. The crew came ashore in the vessel's boats.

From Knightstown Station.—On the night of the 14th October, 1901, a third class boat returning with its catch of mackerel, was swamped by a heavy sea about 300 yards north of Reengarriff Point. Two of the crew were drowned, and two swam ashore. The boat became a total wreck. Three other third-class boats were dashed to pieces on Glenleam Strand during a heavy gale on the night of the 24th January, 1902.

From Smerwick Station.—A canoe not having returned to Smerwick on the morning of the 23rd October, 1901, the Coast Guard boat was launched and the harbour searched. The missing boat was discovered destitute of nets and oars, and bottom up, about half a mile south-east of Blackrock. The boat was probably capsized during the night by the sudden shifting of the wind from a south-easterly to a north-westerly direction. The three men who made up the crew of the boat have not since appeared, nor were their bodies recovered.

From South Arran Station.—On the 20th September, 1902, a third-class boat was capsized when going alongside a turf hooker. The two occupants were saved by the crew of another boat. The boat itself, however, drifted with the current, bottom up, and was eventually totally wrecked.

From North Arran Station.—On the 9th February, 1902, a second-class boat returning from the fishing ground off Kilronan, was caught in a snow squall, and driven ashore on the rocks. The crew saved themselves by jumping ashore.

From Rosmoney Station.—A first-class fishing vessel was totally lost on the east side of Clare Island on the 22nd November, 1901. The boat was engaged in conveying a general cargo from Westport to Clare Island when the casualty occurred.

From Ballyglass Station.—On the 11th November, 1901, two fishermen were drowned. It is supposed that the casualty was caused by the capsizing of their boat while returning from Belmullet to Ballyglass.

From Killybegs Station.—On the 3rd August, 1902, a fisherman was knocked out of a boat whilst obtaining ballast. His body was recovered nine days afterwards.

From Burton Port Station.—Whilst returning to Arlands from Burton Port, a second-class boat struck a rock and was broken up by the sea. One of the occupants jumped overboard and was drowned.

From Rathmullen Station.—One second-class boat was completely destroyed on the 4th August, 1902, by being crushed between a steamer and the pier at Rathmullen.

From Malin Head Station.—On 17th July, 1902, a second class boat whilst returning from Cuidaff capsized three miles north-west of Glengad Head. The vessel was damaged, and one of its occupants drowned.

From Portrush Station.—During a gale on the 20th January, 1902, two second class boats were lost at Portstewart Harbour.

From Carrickfergus Station.—A second class vessel was blown out of Carrickfergus Harbour by a south-easterly gale on the 12th November, 1901. The boat was driven by the storm up to Greenisland, where she struck on the rocks and broke in pieces.

From Marino Station.—On the 13th November, 1901, a second class boat sunk at her moorings on the Holywood Banks, and was broken up.

From Ardglass Station.—The weather on the 17th August, 1902, being threatening, a first-class vessel, which was secured in the outer harbour, was put under weigh to proceed to the inner harbour or dock. During the operation it got broadside on to a dangerous rock in the middle of the harbour, where it remained fast until the following flood tide. The boat received considerable damage.

From Annalong Station.—A second-class fishing vessel, which was seen about two and a half miles off Annalong on the 15th September, 1902, has not since been heard of. The body of one of the crew, which consisted of four men, was picked up off Greenore Point, on the 7th October, 1902.

From Carlingford Station.—A first-class fishing vessel was totally destroyed in Carlingford Lough by a storm on the 12th November, 1901.

Piers and Harbours.

In the Report of the Inspectors of Irish Fisheries for the year 1894, a return was given relating to works under the Sea Fisheries (Ireland) Act, 1883 (46 and 47 Vic., c. 26), up to the 31st March, 1895.

The expenditure under this Act during the year ended 31st March, 1903, was as follows:—

Pier Works—

| | £ | s. | d. |
|---------------------------------------|--------|----|----|
| Portstewart, | 1,078 | 8 | 7 |
| Portavogie, | 2,300 | 14 | 11 |
| Kilronan, | *538 | 8 | 5 |
| Spiddal, | †523 | 5 | 5 |
| | £5,740 | 17 | 4 |
| Engineering Staff Expenses, | 516 | 8 | 10 |
| | £6,257 | 6 | 2 |

* A sum of £1,000 contributed by the Congested Districts Board was also expended on this Pier during this financial year.

† A sum of £300 contributed by the Galway County Council was also expended on this Pier during the financial year.

During the year the Department offered to contribute to the cost of the following marine works:—In Co. Wexford, the extension of Kilmore Harbour, and the construction of an inner dock at Slade. In Co. Waterford, the extension of the pier at Passage East, the construction of a slip at Tramore, and the dredging of Ballinagaul Harbour. In Co. Kerry, the broadening of Fenit Pier and the erection of travelling gantries. In Co. Clare, the construction of a boat slip at Ballyhaline. In Co. Galway, the repair of the quays at Kinvarra; and in Co. Louth, the construction of a small landing place at Rampark.

By arrangement with the Congested Districts Board for Ireland, the services of the engineering staff of that Board have been placed at the disposal of the Department, who have thereby been enabled to satisfactorily deal with the many questions needing the advice of an engineer which have arisen in the course of the Department's work in the development of sea and inland fisheries.

The arrangement has been found to be mutually advantageous.

Marine Superintendence.

The vigilance of the Department's steam cruiser "Helga," and the passing of the Fisheries (Ireland) Act, 1901—which provided very substantial penalties for the offence of illegal steam trawling—have had a marked effect in preventing encroachments on the areas around the Irish coast closed to that mode of fishing.

Arrangements have been made whereby the Department are placed at once in possession of information regarding the presence of fishing vessels within prohibited limits. I am consequently able to say that, although in a few instances owing to circumstances that could not be helped, a small amount of illegal trawling occurred in which those engaged were not made amenable, still there was, in the year under review, a marked diminution in offences of the nature above indicated.

Since the date of my last report only one prosecution for illegal steam trawling had to be instituted. In this case the skipper was fined £25.

The skippers of four sailing vessels were prosecuted and fined for illegally trawling off the Balbriggan coast in March last.

The coastguard at Kingstown were instrumental in bringing to a successful conclusion legal proceedings against four men who were found using otter trawls from two small sailing vessels in Dublin Bay, in contravention of the by-law which prohibits all trawling in that Bay. The four men were fined £1 each, and their nets were forfeited and sold.

Complaints of the illegal use of certain herring nets between sunrise and sunset off the County Donegal Coast having been received, I instructed the captain of the "Helga" to patrol that locality. He seized one train of nets.

An Arklow fishing boat "The Rose in June," was sunk towards the end of December last, off Kilmichael Point, by collision with another boat. The Department's cruiser "Helga" was sent to endeavour to raise her, but owing to stormy weather, the attempt was unsuccessful.

SCIENTIFIC RESEARCH.

Since the issue of my last Annual Report, Part I., the second part, dealing with scientific investigations, has been published. Its preparation was much delayed, owing to the fact that Mr. Holt and his scientific staff had their hands full of business connected with the Cork Exhibition. The papers in the Appendix dealt with many matters of both economic and scientific interest.

The Poreupine Bank, a deep sea fishing ground off the West of Ireland, was investigated. The history of oyster industry and the present state of the beds off the Arklow coast were dealt with at length, and the volume contained many papers on special branches of the Irish marine fauna.

The investigations on which these papers were based were carried out on board the s.s. "Helga," when her other duties permitted of scientific work; on board the mackerel boat "Monica," and at the Department's Marine Laboratory at Ballinakill.

The Report also contains translations from the Norsk of important papers on subjects concerning the general development of oyster fisheries.

Turning to the salmon fishing, a table was given of the marking of salmon and the re-capture of marked fish; and besides the plates illustrating the more strictly scientific matter many drawings occur explanatory of the nature of apparatus used in oyster culture.

Attention has been paid to questions relating to trout farming and artificial propagation of salmonidæ.

Arrangements are being made with the Ulster Marine Biological Association, who are opening a laboratory at Larne, to undertake certain investigations on behalf of the Department; in return for which the Department have contributed towards the general fund of the Association, and have supplied them with some necessary gear.

LEGISLATION.

During the year a short Fishery Bill was introduced into Parliament by the Chief Secretary. Its objects were (a) to enable the Department to consider applications for change of close season without saddling the persons on whose behalf such applications were made (many of whom are poor people) with the expenses of the necessary public inquiries; (b) to carry out one of the recommendations of the Viceregal Commission on Inland Fisheries of Ireland, to the effect that private netting

rights in fresh waters should be restricted; and (c) to give power to the Department to exercise a control over the fish hatching operations carried out in Ireland.

Owing to opposition, which was evidently due to misunderstanding as to the scope of the measure, the Bill was dropped; but it is hoped that it will be re-introduced on the earliest suitable occasion.

Bills to amend the laws relating to the salmon fisheries of Ireland—principally with the object of giving further effect to the recommendations of the Viceregal Commission—were prepared by private persons and submitted to this Department. The proposals contained therein were discussed by the Special Advisory Committee on Fisheries, and the Department were thus assisted in arriving at the most reasonable conclusions thereon.

The Bill introduced last year by the Port and Docks Board, which proposed *inter alia* to levy new tonnage dues on steam fishing vessels using the Port of Dublin, and also to levy a rate on fish, passed, with modifications, through Parliament, and came into force on the 1st January, 1903. During its passage the opposition of the Department to the part of the Bill affecting the fishing industry resulted in obtaining a substantial reduction in the dues on fishing vessels; but no alteration in the rates on fish was secured.

INLAND FISHERIES.

Salmon Fisheries.

The most noteworthy feature of the salmon fisheries is the remarkable run of peal which took place in the majority of the rivers. This run was the largest for many years, and has in some localities effected a most welcome revival of the industry.

The returns of the railway companies show an increase of about 30 per cent. in the amount of salmon and trout carried over their various systems.

Of the reports received from the Boards of Conservators, 21 indicate an increase, 1 no change, and 3, viz., Dublin, Cork, and Ballycastle, a decrease in the quantity of fish captured. Several Boards report a "great improvement," which is entirely owing to the peal run, the spring salmon showing no increase in quantity.

This satisfactory state of affairs in 1902 may, perhaps, be attributed in a large measure to several wet winters, which had the effect of minimising the risks to which spawning fish, slats, and fry were exposed during the periods through which the results of the rainfall were felt.

The meteorological conditions during the open season were generally favourable to netting, but not so to angling, the "favourable" and "unfavourable" reports being about equal in number.

The number of offences against the Fishery Laws do not show any material change. In only one district was there a marked increase; in this case the quantity of fish in the river seems to have proved too great a temptation to the poaching fraternity.

In the flax-growing districts the usual difficulty of preventing harm to fish by flax water occurred in many cases, and was the source of a large number of prosecutions. In this connection the Department are prepared to suggest an amendment of the existing law to enable flax-water to be discharged into rivers in time of flood, under proper supervision.

In one manufacturing district there were several cases of pollution by the effluent from mills.

Deliberate poisoning by lime and spurge with the intent to kill fish occurred in six districts. In the Kenmare district there were no less than 9 cases on three rivers. The facts show an increase in this practice which is to be regretted. Greater severity in the statutory penalties for such offences is practically the only means by which they can be checked.

The output of salmon and trout fry from hatcheries has this season been far in excess of all those in previous years. The number was approximately 6,000,000, the product of 21 hatcheries. Ten of these hatcheries have been subsidised by the Department. About 200,000 eggs were imported, principally German salmon eggs.

A hatchery with a capacity of 2,000,000 has been erected by the Department on the Blackwater, and arrangements made to subsidise it for a period of ten years. This hatchery was this season responsible for 1,600,000 fry, the next largest output being that of the Blackcastle hatchery on the Boyne, with 1,100,000 fry.

Full details of the hatchery operations throughout the country will be found in Part II. of this Report.

Grants in aid of protection were made by the Department to the Boards of Conservators of the Waterford and Bandon districts, in which districts the interests of the public in the salmon fisheries show a marked predominance over those of private individuals.

An important point of law has been decided by a test case this year, the question being whether magistrates had power to inflict the statutory penalties for the erection of illegal fixed engines. The decision was in the affirmative. The Conservators were assisted by the Executive in the necessary proceedings.

A considerable number of orders were issued giving to millers partial or total exemption from the necessity of maintaining the statutory gratings in their mill streams, arrangements for the protection of fish, which were satisfactory both to the millers and the fishery interests, being made in many of the cases.

The analysis of polluted river water suspected to be deleterious to fish has been undertaken. This should prove a means of checking trivial prosecutions, as well as of protecting the fisheries from injury.

The division of the former Killarney district into two new districts, viz., Killarney and Waterville, which was effected in 1901, appears to have proved satisfactory.

I cannot omit to record the continuous testimony which is being borne in all parts of the country to the constant and increasing efforts made by the R.I.C. for the protection of the fisheries. In many districts, without this invaluable assistance, the Conservators would be practically powerless to safeguard this national industry.

The total number of rod licences issued was 2,533, compared with 2,485 in 1901. As to engines used in the tidal waters by fishermen who fish on common law rights, the number of draft net licences issued was 682, an increase of 23 on the previous year; and drift nets, 339, a decrease of 21.

The total amount received by Boards of Conservators for licences in 1902 was £9,275. The total ten per cent. rate collected on the poor-law valuations of fisheries was £873 10s. 6d. Fines, and the sale of forfeited engines, &c., produced £611 1s. 3d., and subscriptions came to £1,843 4s. 11½d. The grand total was £12,602 16s. 8½d., as compared with £12,339 11s. 5d. in 1901.

See Appendices No. 24, p. 146, and No. 27, p. 166.

Pollen Fisheries.

The amount of pollen captured in Lough Neagh during 1902 was considerably less than in the previous year. Over 95 per cent. of the take is exported. There were 338½ tons so dealt with, as against 443¼ in 1901. At an average price of £16 a ton, the value of the export would be £5,416.

Licences were issued in 1902 for 88 trammel and 164 draft nets for pollen, producing £334. It requires two men to work one of these engines.

My attention having been drawn to the injury done to Linen Pollen nets by "water-crickets" (*Asellus aquaticus*), I directed an experiment to be made, with the object of finding a mode of treating these nets in a way that would protect them from the attacks of the crustacean in question. The method indicated in the following Memorandum (which has been extensively circulated in the district affected) has been found to be completely successful:—

DIRECTIONS FOR CURING LINEN POLLEN NETS WITH CREOSOTE, AS A PROTECTION AGAINST "WATER-CRICKETS."

Pour the creosote into any convenient vessel. Dip the net into it, then hang it above the vessel to allow the superfluous liquor to drain back. Spread the net in the open air to dry for about twenty-four hours. Put the net again into the creosote and leave it to soak for two days. Drain and dry as before. When dry the net will be ready for use.

The creosote requires no preparation of any sort before use. It costs about £1 for a small barrel.

THE CORK EXHIBITION.

At the Cork Exhibition of 1902, this Branch organised a comprehensive fisheries exhibit, illustrative of the principal methods that exist in Ireland, and of those prevailing in other countries which seemed suitable for adaptation.

The exhibit was divided into three parts: the main one, in the Industrial Hall, consisting of types of boats and gear, lines, hooks, nets, oyster-culture apparatus, salmon and trout flies, &c. The other parts consisted of a separate aquarium building containing hatchery apparatus, specimens of living fish, &c., and a series of artificial ponds in the open air showing the German system of trout-farming, and containing various species of trout at different ages.

The objects in the main exhibit may be classified under the heads of the various methods of fishing.

The trawling industry was illustrated by a beautiful model of a modern steam trawler, which was most kindly lent to the Department for exhibition by the Fishmongers Company of London. There were also several kinds of beam and otter trawls, which showed the variations of type suited to the requirements of different local conditions.

The drift-net fisheries for mackerel and herring were represented by models of the Arklow type of boat, the Scotch "Zulu," and the Manx "Nobby," the merits of which have of late years been realised in this country.

A full-sized open boat of the improved "Greencastle yawl," or "Drontheim" type, and a Kerry canoe for four pairs of oars showed the most useful kinds of open boat which are in vogue in different places. By way of comparison, there were specimens of the Connemara "Pookawn," and the primitive Donegal canoe with a single paddle.

Mackerel and herring nets were supplied by Irish manufacturers for exhibition, showing different materials and methods of mounting; also ropes and twines.

The line-fishing industry was represented by spillers, or long-lines, mounted in the most approved manner, and unmounted lines and hooks.

Nets and trawls used for the capture of shrimps and prawns, and lobster and crab-pots of varied types, proved of interest as a comparison with the forms of this apparatus in use in Ireland.

The section relating to the French system of oyster-culture was very complete. The present position of the Irish oyster fisheries being somewhat critical, owing to the increasing difficulty of obtaining young stock from native or other sources, we have undertaken an extensive series of experiments on the French system, with a view to testing the possibility of its adoption in this country. This system was illustrated by

oysters at different ages, the tiles and other devices on which the spat is collected, the methods by which it is detached, and the cages in which it is safeguarded and raised to maturity.

The numerous accessories to the practical management of the industry, models of the types of boats employed, and traps to catch the enemies of the oyster, have, it is hoped, proved a useful object lesson to many Irish owners of oyster beds.

Realising the importance of the inland fisheries as a means of attracting visitors to the country, as well as being a source of livelihood to many thousand fishermen, this Branch made a collection of salmon and trout flies used on our rivers and lakes, and published in connection therewith a handbook, with a map showing the localities in which the different flies are used.

That this publication has been appreciated by the angling community is proved by the number of copies that have been applied for.

In the Aquarium Building were collected specimens of the salmon and trout hatching apparatus in use in the United Kingdom, Germany, and America, in working order, and also, in some cases, in duplicate and unpainted, so that the details of their construction could readily be seen. The opportunity thus afforded of comparing the merits and demerits of the different systems was largely availed of by many who appreciated the efforts being made for the development of our salmon and trout fisheries. A collection of live fish in glass tanks proved a constant source of interest to visitors.

The fish-rearing ponds in the gardens were designed after the methods of Herr Jaffé, of Osnabrück, and embodied those many practical devices which his extensive experience has proved to be most effectual in controlling the flow and temperature of the water supply, the safeguarding of the fish at their various stages, and the encouragement of the insect life necessary for their healthy development.

Trout of several species, and of many ages, were kept in the ponds.

As full particulars of the exhibits are to be found in the catalogue and other publications of the Department in connection with the Exhibition, it is unnecessary to enter into greater detail regarding the work.

As a general result, both at the Exhibition, and since its close, numerous enquiries regarding these exhibits were received, which is an indication that our efforts have set many of our countrymen thinking about the work of the development of our fisheries, which has been entrusted to the Department.

INLAND FISHERIES CONFERENCE.

When the organisation of the Department's Section at the Cork Exhibition was being discussed in 1901, a suggestion was made by the Earl of Mayo that a Conference on Inland Fisheries should be held. The proposal was taken up by the Department, and a Committee, consisting of some of the Officers of the Department, with the Earl of Mayo, Alderman Dale, and Mr. J. A. Place, was formed to carry out the project.

The Conference was of a representative character as far as the United Kingdom was concerned, and Papers were read by some of the foremost British authorities.

Several prominent European and American authorities on fishery matters were also invited to attend and to contribute papers, but, unfortunately, it was found that, in some cases, the pressure of official duties, and, in others, ill-health, prevented their being present.

Herr S. Jaffé, of Osnabrück, however, contributed a most important paper which was read and discussed.

The attendance was about one hundred on each of the two days. Special facilities were kindly granted by the two railway companies, with termini in Cork, to the members of the Conference, and the Executive Committee of the Exhibition also granted free admission and offered their co-operation in other ways.

The Conference was held in the Department's Agricultural Lecture Hall, on August 5th and 6th.

On the 5th August the proceedings were opened by an Address by the Vice-President of the Department, and by an expression of welcome to the Members of the Conference from the Earl of Bandon, who was President of the Exhibition Committee.

In the unavoidable absence of Herr Jaffé, his Paper on "Trout Farming" was read for him. It dealt exhaustively with all the varied details of cultural work with which Herr Jaffé's name has been so prominently associated, and was illustrated by admirable diagrams. The Paper gave rise to an interesting and important discussion, in which Mr. J. B. Feilding took a prominent part.

This was followed by a Paper on "The Feeding of Salmon in Fresh Water," by J. Kingston Barton, Esq., M.R.C.P., London, J.P., which also had to be read for the author in his unavoidable absence. The discussion which arose on this subject made prominent the fact that scientific investigation into even such elementary questions of salmon life is urgently needed at the present day.

The next paper was one which was, perhaps, of more general interest to the members of the Conference and the country at large. It was "The Causes of the Decline of Our Inland Fisheries," by J. W. Willis Bund (Chairman, Severn Fishery Board). The points and suggestions contained in the paper were eagerly discussed, and opinions and counter-opinions freely offered. The discussion proved of the greatest importance in indicating what, in the opinion of the members of the Conference coming from all parts of Ireland, were generally regarded as the causes of the decline in the salmon fisheries.

The Conference reassembled on the morning of the 6th August, and was opened by a discussion on Mr. Feilding's paper on "The Necessity of Further Scientific Investigation in the Economic Side of the Life-History of Inland Edible Fishes." As a result of the discussion, resolutions were unanimously passed urging the necessity for investigation by the State into these many problems, and pressing the view that, as they were of national interest, the necessary funds should be forthcoming from a national source.

In deference to a generally expressed opinion that the controversial question of the introduction of Rainbow Trout was one which might usefully be discussed on such an occasion, the Scientific adviser to the Fisheries Branch of the Department initiated a discussion on the subject. Various opinions, in many cases diametrically opposed to each other, were brought forward, but the balance of opinion seemed to point to the fact that our attitude towards the introduction of Rainbow Trout in unenclosed waters, namely that of caution and reserve, was the right one which should be adopted until more was known of their habits.

A resolution was proposed by Mr. Herbert, and carried unanimously, that the Government, should give the maximum amount of assistance possible towards the protection of the salmon fisheries by the employment of the Coastguards and the Royal Irish Constabulary. General testimony was borne by the members of the Conference to the admirable work done by the Constabulary in assisting Boards of Conservators in the fulfilment of their duties.

The Conference rose at about 1.30 p.m., and during the afternoon the members were invited to visit Cork Harbour in the Department's steam cruiser, "Helga."

The time at the disposal of the Conference proved insufficient for getting through the whole programme, so that numerous valuable contributions were unavoidably excluded from discussion. These, however, have been included in an exhaustive report of the proceedings of the whole Conference, which has been published by the Department, and in view of which it has not been necessary to here do more than indicate generally its scope and objects.

Many scientific and other reports have been received during the year; and this opportunity is taken of thanking those who placed at the disposal of the Department the valuable information they contain.

Valuable assistance in the enforcement of the salmon fisheries laws, and in the investigation of numerous matters of detail arising out of our administration of the loan funds, was rendered by the Inspector-General, Officers, and men of the Royal Irish Constabulary, and also by the Officers, Warrant Officers, and men of the Coast Guard in so far as they were permitted by the orders of the Lords Commissioners of the Admiralty; and the Fishmongers' Company of London have continued the important assistance hitherto rendered, and which has had a marked effect in the direction of the suppression of salmon poaching in Ireland.

I have the honour to be,

Sir,

Your obedient servant,

WM. SPOTSWOOD GREEN,

*Chief Inspector of
Fisheries.*

Department of Agriculture and
Technical Instruction for Ireland.
Fisheries Branch,

18th day of *July*, 1903.

Bushes and bundles of sticks were laid down to collect spat, of which there was a small fall. Native oysters do better than any other. 5,000 oysters, value about £18, taken up. |
| 115 | 810 0 0 | 80 | Bed is in a good state. 71,500 oysters, value £250, taken up and sold. 200,000 oysters, from public oyster bed in Galway Bay east of Bird's Island, near Clarinbridge, laid down. There was a small fall of spat. |
| 140 | 153 3 8 | — | Bed is in a good state. It has been dredged, cleaned, and scattered oysters collected. About 40,000 oysters, value £150, have been taken up. There are bad prospects, as there has been practically no breeding for past two years. This has been the case on all the beds in the locality. This report also refers to No. 33. |
| 170 | 502 3 2 | — | Bed is clean and is very fairly stocked. Only a few samples sold to test the market. From 30,000 to 40,000 oysters, purchased from the Galway Bay public beds, laid down. No fall of spat. |
| 171 | 390 3 0 | — | This bed has been worked and is in good condition. 3,000 oysters have been taken up. Some 50,000 or 60,000 oysters, two-thirds grown, obtained from public beds in Galway Bay, have been laid down. There has been no apparent fall of spat, notwithstanding that extensive arrangements of collectors were made. |

APPENDIX

SUBSTANCE OF REPORTS received from Clerks of

| DISTRICT. | What is the general state of the Salmon Fisheries in this District? Are they as a rule improving or declining? | Has the take of Salmon and Grilse by nets and weirs throughout the District been more, or less productive in the present year than in the past one? |
|-------------------------|--|---|
| Dublin, | Fair ; slight improvement, | Less productive, |
| Wexford, | Improving, | Salmon about the same ; large improvement in the take of grilse by nets. |
| Waterford, | Fair ; improving, | More productive, especially as regards grilse. |
| Lismore, | No improvement in rod or net fishing until run of peal in May, June, and July, which was better than previous years. | The take generally shows a slight increase, due to good run of peal. |
| Cork, | Fair ; declining, | Considerably less, |
| Cork (Bandon) | Fairly good ; slight improvement, | More productive, |
| Skibbereen, | Fair ; good season for nets ; improving. | More productive, |
| Bantry, | Better than last three years ; improving. | More productive, |
| Kenmare, | Fair ; improving. | More productive ; very good year, |
| Waterville, | Poor ; about the same as last year, | Salmon about the same ; Grilse more productive. |
| Killarney, | Fair ; slight improvement, | Salmon about the same ; Grilse more productive. |
| Limerick, | Great improvement, | Take of Salmon poor, but that of Grilse largest for many years. |
| Galway, | Good ; improving ; best year for Galway fishery both as regards run and catch since 1891. | More productive, |
| Connemara, | Bad ; declining. | — |
| Ballinakill, | Very much improved, | Very much more productive, |
| Bangor, | Healthy ; improving, | Much more productive, |
| Ballina, | A decided improvement on last few years. | More productive, |
| Sligo, | Very good ; fish improving in weight and quantity. | More productive in Ballisodaro ; slightly less in Sligo River. |
| Ballyshannon, | Improving, | More productive, |
| Letterkenny, | Fairly good ; slight improvement, | More productive, |
| Londonderry, | Fairly satisfactory ; improving, | More productive, |
| Coleraine, | Improving, | More productive, |
| Ballycastle, | Declining, | Less productive, |
| Dundalk, | Generally satisfactory, except Castle-town River in which the Salmon fishing is declining. | More productive, except Castletown River. |
| Drogheda, | Improving as regards grilse ; spring fishing bad. | Slightly more productive, |
