1901-1962

CLIMATOLOGICAL SUMMARY

Hillsboro is a farming and commercial center and the county seat of Montgomery County. The surrounding area is part of the Springfield Plain Physiographic Section. The topography is generally flat with broad, shallow valleys. The topography has no effect on the weather and climate of the Hillsboro area.

The climate is classified as humid continental, which features large extremes in temperature and precipitation. Sudden changes in the weather occur 30 to 35 times a year when weather fronts pass through the area. The summers vary from warm to hot and the winters vary from cool to cold. Weather conditions vary from day to day, month to month, and year to year.

For instance, the average annual precipitation is 38.34 inches, but it has been as high as 52.89 inches (1957) and as low as 25.59 inches (1914). The wettest month normally is June, and it averages more than twice as much precipitation as February, the driest month normally. On the average, thunderstorms account for 44 percent of the average annual precipitation, and snowfall for another 4 percent. Precipitation in the warmer half-year (April-September) is normally 59 percent of the annual total. The largest 1-day rainfall recorded is 6.53 inches on October 18, 1905.

The average annual number of days with thunderstorms is 48. Hail usually occurs on 3 or 4 days per year, sleet on 6 days, and freezing rain on 4 days. Snowfalls of 1 inch or more in a 24-hour period normally occur on 5 days per year.

July is normally the warmest month of the year, although either June or August has been the warmest. January is normally the coldest month, but occasionally December, February, or March has been the coldest. The highest temperature on record is 114 degrees on July 14, 1954, and the lowest -22 degrees on February 14, 1905. On the average, 46 days have maximum temperatures of 90 degrees or higher, and 4 days have miniums of 0 degrees or lower.

Normally the last spring day with a freezing temperature is April 22 and the first freezing temperature in the fall occurs on October 17, producing an average growing season of 177 days. Ten percent of the time the first freezing fall temperature will occur before October 1, and the last spring freeze after May 9. The average annual number of heating degree days is 4992.

In the tabular data on the next pages all temperatures are expressed in degrees Fahrenheit; precipitation, snowfall, and snow depth values are in inches; and missing data are indicated by M. If 1 day of precipitation or snowfall was missing during a month, the monthly total was considered missing. If more than 5 days of temperature data were missing, the monthly average was considered missing.

The summarized climatological data presented were derived from official U. S. Weather Bureau records for Hillsboro, which have been transferred to punched data cards by the Illinois State Water Survey and the Weather Bureau. All monthly and annual totals, averages, and extremes were determined by computer analysis of the punched cards. This material has been prepared by Stanley A. Changnon, Jr., State Water Survey climatologist.
