# REGIONAL REVIEW

In October 1996, Scottish Unemployment fell by 7,691 to stand at 183,401. This represents a monthly fall of 4% and leaves 7.5% of the Scottish workforce without a job. The male count fell by 4,057 or by 2.8% whilst female jobless fell by 3,634 or 7.9%. Male unemployment currently stands at 141,193 or 10.4% of the male workforce and female jobless at 42,208 or 3.9% of the female workforce.

A similar pattern emerged with respect to British unemployment although the fall was relatively greater. Total unemployment fell by 118,381 or by 5.9% to stand at 1,895,671 or 7% of the British workforce. During October, male unemployment in Britain fell by 75,156 or 5% to stand at 1,429,835 or 9.4% of the male workforce, whilst female unemployment fell by 43,225 or by 8.5% to stand at 465,836 or 3.9%.

Scottish male unemployment remained above the British rate whilst the female unemployment rate in Scotland and Britain both fell to 3.9%. Scottish unemployment remained below that of GB between February 1992 and December 1993 whereas for females, the Scottish rate lay below the GB rate between May 1992 and March 1996. In total, the Scottish unemployment rate lay below its British equivalent between March 1992 and April 1994. The 4% fall in unemployment in October compares favourably with the 2.6% fall in October 1995.

The seasonally adjusted count for Scotland and the GB is set out in Table 2. Total unemployment in Scotland fell by 2,300 which represents a 1.2% fall. Male unemployment fell by 1,300 in October or 0.9% whilst female unemployment fell by 1,000 (2.2%). The corresponding GB figure shows total unemployment falling by 37,500 (1.9%) with male unemployment dropping by 28,200 (1.9%) and female unemployment falling by 9,300 (1.9%).

In October, the seasonally adjusted count stood at 189,000 or 7.8% of the Scottish workforce which remains higher than the rate posted for GB (7.1%). The relative unemployment rate captures the disparity between Scottish and British rates and is set out in Figures 4-6. A relative unemployment rate of above 100 indicates that Scottish unemployment is more adverse than nationally.

Figure 4 indicates that Scotland's relative position has been deteriorating since 1993.

In the Quarter to October 1996, seasonally adjusted unemployment fell by 5,700 or 2.9% whilst jobless in GB fell by 91,800 or 4.5%. For males and females in both Scotland and GB, unemployment fell. In the case of males, the Scottish count fell by 3,600 or 2.4% compared with a national fall of 69,100 (4.5%). The quarterly fall in female unemployed was 2,100 (4.6%) which compares with a fall of 22,700 or 4.6% in GB.

In the year to October 1996, Scottish jobless fell by 6,500 (3.3%) whilst the GB count decreased by 230,700 (10.6%). The annual fall in the GB is sharper than in Scotland for both males and females. The Scottish male count fell by 5,200 (3.5%), which is weaker than the GB male fall of 179,200 (10.8%). Female unemployment in Scotland fell by 1,300 (2.9%) while nationally the fall was 51,500 (9.9%).

As we have set out in previous commentaries, there have been large cyclical rises in unemployment, particularly in the South in the 1990-93 period. The trend in GB regional unemployment is set out in Figures 13-15. In the graphs, the South of England refers to London, the South East, the South West and East Anglia. Midlands and Wales is made up of East and West Midlands plus Wales and the North of England comprises Yorkshire & Humberside, the North West and Northern Region. In the 1990-93 period, unemployment growth was strongest the further south one looks. In consequence, the fall in unemployment has been sharpest in many areas experiencing the sharpest rises during the recession. However, unemployment remains relatively high compared to pre-recession levels, especially in the South. Only in Scotland has the jobless queue fallen back to 1990 levels.

Figures 16-18 show an initial narrowing of the relative unemployment rates. In the South of England, the relative peaked at 97.1% between January and August 1993, up from 66.7% in January 1990. Since then, the convergence towards the GB rate has continued to unwind and the relative now stands at 89.7%. In Midlands and Wales, the relative has remained fairly stable

indicating a continued pattern of unemployment similar to national rates. In the North of England, relative improved from 138.9% in January 1990 to 105.8% in the first part of 1993 and has now deteriorated to 114.1%. In 1990, the Scottish relative stood at 155.6%, fell to a low of 94.2% in July 1993 before rising to the current rate of 109.9%. It should be noted that The Labour Force Survey shows that labour market participation rates in Scotland have been falling since 1992 accounting for a considerable proportion of the jobless fall and that this effect is less evident in other regions.

Tables 16 and 17 set out the unemployment position and trends in the October 1990-1996 period. Figures 41-44 highlight the best and worst performing British TTWAs in terms of jobless change for the year to October and for the October 1990-1996 period. Figure 39 shows that in October 1996, Cumnock and Sanquhar remained the GB TTWA with the highest unemployment rate with Western Isles in fifth place and Girvan in 11th position. In Addition Forres, Irvine, Arbroath, Newton Stewart, Kilmarnock and Alloa are in the worst 25 TTWAs. Since 1990, Scottish TTWAs have tended to move down the rankings, particularly urban TTWAs with the unemployment black spots in Scotland increasingly being in rural areas.

Figure 43 indicates that Scotland accounts for 28 out of 50 GB TTWAs with the worst trend in unemployment change although in half of these areas unemployment fell; no Scottish TTWAs appeared in the 50 best performing areas. In the October 1990-1996 period, 20 of the best performing TTWAs were Scottish with Dundee, Stirling, Newton Stewart and Kilmarnock in positions 1-4 all showing falls in unemployment although it remains unclear as to how much of this is due to falling population and labour market position or to local residents gaining employment. There were two Scottish TTWAs in the 50 worst performing areas.
