Key words: errata, addenda – stars: individual: CPD -28° 2561 – stars: magnetic field – stars: massive – stars: rotation.

In our paper *Rotation, spectral variability, magnetic geometry and magnetosphere of the Of?p star CPD -28° 2561* published in MNRAS, 447, 2551 (2015), an erroneous version of Fig. 10 was included that showed two rotational cycles rather than the single cycle indicated. Here, we provide the corrected figure. This substitution has no impact on the conclusions of the paper.

^{*}Based on observations obtained at the Canada-France-Hawaii Telescope (CFHT) which is operated by the National Research Council of Canada, the Institut National des Sciences de l'Univers (INSU) of the Centre National de la Recherche Scientifique of France, and the University of Hawaii.

¶FNRS Research Associate.

ACKNOWLEDGEMENTS

GAW acknowledges support from the Natural Science and Engineering Research Council of Canada (NSERC). RHB and JIA acknowledge financial support from FONDECYT, Regular 1140076 and Iniciación 11121550, respectively. JMA acknowledges support from (a) the Spanish Ministerio de Ciencia e Innovación through grants AYA2010-15081 and AYA2010-17631; (b) the Junta de Andalucía grant P08-TIC-4075; and (c) the George P. and Cynthia Woods Mitchell Institute for Fundamental Physics and Astronomy. YN acknowledges support from the Fonds National de la Recherche Scientifique (Belgium), the Communauté Française de Belgique, the PRODEX XMM and Integral contracts, and the 'Action de Recherche Concertée' (CFWB-Académie Wallonie Europe). STScI is operated by AURA, Inc., under NASA contract NAS5-26555. JIA, RB, RG, JMA, AS were Visiting Astronomers, LCO, Chile. JIA and RB were Visiting Astronomers, ESO La Silla, Chile. RG was a Visiting Astronomer, CASLEO, Chile. RHDT acknowledges support from NASA award NNX12AC72G. AuD acknowledges the support by NASA through Chandra Award number TM4-15001A. CFHT and TBL observations were acquired thanks for generous allocations of observing time within the context of the MiMeS Large Programs.

Figure 1. Predicted light curve and broad-band polarization variations of CPD $-28^\circ 2561$. Variations are shown for two models: ($i = 35^\circ, \beta = 90^\circ$), and ($i = 90^\circ, \beta = 35^\circ$). Whereas both models produce identical light curves, their polarization variations are clearly distinct.
