

## Effects of RAF inhibitors on PI3K/AKT signalling depend on mutational status of the RAS/RAF signalling axis

### Supplementary Materials

**Supplementary Figure S1:** CaCO2 control and cells expressing wildtype, V600E mutated BRAF or G12V mutated KRAS were treated with the RAF inhibitors AZ628 and L779450 for 4 h. Phospho-ERK and phospho-MEK were measured with Luminex technology and shown as log2 fold change compared to DMSO treatment ( $n \geq 3$  replicates).
