

## Development of Waste Coir-reinforced Aluminum Matrix Automotive Brake Pad Material

Atiqah Afdzaluddin, Md Abdul Maleque and A. R. Zamani Department of Manufacturing and Materials Engineering, Faculty of Engineering, International Islamic University Malaysia Phone: 010-3682595, E-mail: maleque@iium.edu.my

## INTRODUCTION

•This work presents a new development of wastereinforced aluminum matrix automotive brake pad materials with a view to replace the use of asbestos whose dust is carcinogenic and has a harmful effect to the human life.

## NOVELTY

•Green asbestos-free brake pad using waste coir fibre

•Lighter weight material compared to conventional brake pad

Cost effectiveness

•NBPM 1 with 5% vol. of coir fibre showed better physico-mechanical and tribological properties (both wear and friction)compared to NBPM 2 and CBP as well.

•Hence, natural coir fiber can be used as a candidate fiber or filler material for the mass-scale fabrication of asbestos-free brake pad without any harmful effect.
