# TABLE OF CONTENTS

---

<b>Preface</b>	<b>i</b>
<b>Acknowledgement</b>	<b>ii</b>
<b>Editor</b>	<b>iii</b>
<b>Table of Content</b>	<b>v</b>
<b>1. Visual Tracking for Human Face</b> A.A. Shafie, Iqbal and M.R. Khan	<b>1</b>
<b>2. Robot Design : A Case Study of Team Learning Experience and Outcome</b> A.A. Shafie	<b>7</b>
<b>3. Development Neck Support for Humanoid Robot Head</b> A. A. Shafie, M.N. Kasyfi and N. I. Taufik Y	<b>14</b>
<b>4. Development of Cooperative Mini Robot</b> Amir A. Shafie , Siti E.M.Z and Shazeela A	<b>21</b>
<b>5. Humanoid Robot Arm</b> Amir A. Shafie and Mohd N. Y.	<b>26</b>
<b>6. Designing Human Robot Interaction for Emotionally Expressive Robotic Hear AMIR-III</b> A. Iqbal, A. A. Shafie, and M. R. Khan	<b>32</b>
<b>7. An Overview of Fuzzy Based Person Following Robot</b> T. Alamgir, I. J. Alfar and M. M. Rashid	<b>38</b>
<b>8. Mechanical Design of a Person Following Robot</b> Tarik Bin Alamgir, Ibrahim Jawad Alfar and Muhammad Mahbubur Rashid	<b>43</b>

<b>9. Development of Fuzzy Based Person Following Robot part 2</b>	<b>49</b>
Tarik Bin Alamgir, Ibrahim Jawad Alfar and Muhammad Mahbubur Rashid	
<b>10. Mobile Robot for Fined Tube Inspection</b>	<b>56</b>
Muhammad Mahbubur Rashid	
<b>11. Robot Aided Upper Limb Rehabilitation System: Mechanical Design</b>	<b>64</b>
Shahrul Na'im Sidek, Hidayatullah Mohamed Nawi	
<b>12. Robot Aided Upper Limb Rehabilitation System: Electronics for Sensors and Actuators</b>	<b>69</b>
Shahrul Na'im Sidek, Khairul Anwar Khalid	
<b>13. Robot Aided Upper Limb Rehabilitation System: Results and Analysis</b>	<b>73</b>
Shahrul Na'im Sidek	
<b>14. Snake Robot Locomation in Narrow Space: A Review</b>	<b>79</b>
Raisuddin Khan, Mitsuru Watanabe and Masum Billah	
<b>15. Multiple Hexapod Robot and Collaborative communication</b>	<b>86</b>
Raisuddin Khan, Masum Billah and Mohiuddin Ahmed	
<b>16. Autonomous Unicycle Robot Using Reaction Wheel Pendulum: Mechanical Design</b>	<b>94</b>
Atika Adrina Teepol, Nur Fadhilah Mohd Fauzey, Shahrul Na'im Sidek, Yasir Mohd Mustafah	
<b>17. Autonomous Unicycle Robot Using Reaction Wheel Pendulum: Controller Design</b>	<b>103</b>
Nur Fadhilah Mohd Fauzey, Atika Adrina Teepol, Shahrul Na'im Sidek, Yasir Mohd Mustafah	

HISTORICAL BACKGROUND AND EDUCATION

<b>19. Develop an Algorithm for Goal Finding Robot using Reinforcement Learning</b>	<b>118</b>
M. Kamal, R. Khan, S. Bazuhair and M. Billah	
<b>20. Design and Development of 2 Fingers Robotic Hand Actuated by Active Grasping Data</b>	<b>126</b>
MdMozasser Rahman <sup>1</sup> ,MohdZoolfadli B MdSalleh	
<b>21. Design and Development of Interactive Fish Robot</b>	<b>144</b>
MdMozasser Rahman <sup>1</sup> ,RizaMuhida and Mohammad Zukhair b MohdNazmi	
<b>22. Design and Development of A Digger Robot</b>	<b>154</b>
MdMozasser Rahman,MohdRuzaini Bin AbdRalim and Others	
<b>23. Glass Wall Cleaning Robot: A Review</b>	<b>170</b>
Md Mozasser Rahman, Ahmed Murgab Mohammed Mahil, Norsofiana Bt Umar and Nurul Izzati Bt Samsuddin	
<b>24. Glass Wall Cleaning Robot: -Electrical design and control</b>	<b>177</b>
Md Mozasser Rahman, Ahmed Murgab Mohammed Mahil, Norsofiana Bt Umar and Nurul Izzati Bt Samsuddin	
<b>25. Glass Wall Cleaning Robot: -Electrical design and control</b>	<b>187</b>
M. M. Rahman, M. R. b A. Ralim	
<b>26. Development of Robotic Manipulator to assist human using brain Signal</b>	<b>198</b>
Mahbuba Hossain, Raisuddin Khan, and Masum Billah	
<b>27. Glass Wall Cleaning Robot: Mechanical Design</b>	<b>204</b>
Mahbuba Hossain Raisuddin Khan, and Masum Billah	

<b>28. Intelligent SCADA Based Monitoring Scheme for Low Voltage Distribution System</b>	<b>210</b>
M. J. E. Salami, A. M. Aibinua, Mohd Shafie Bin Sani and Nurfaizal Bin Wah	
<b>29. Intelligent SCADA Based Monitoring Scheme for Low Voltage Distribution System</b>	<b>218</b>
Abdullateef Ayodele Isqeel and Momoh Jimoh Eyiomika Salami.	
<b>30. Autonomous Goal Finding Robot</b>	<b>227</b>
M. Kamal, Md. R. Khan, Faisal and M. Billah	
<b>31. Intelligent SCADA Based Pipe Monitoring System</b>	<b>236</b>
M. J. E. Salami, A. M. Aibinua, Mohd Shafie Bin Sani and Nurfaizal Bin Wah	
<b>32. Path Tracking of Car Like Mobile Robot</b>	<b>250</b>
A. A. Isqeela and M. J. E. Salami	
<b>33. A New Energy Efficient Building System</b>	<b>255</b>
M. J. E. Salami, Md. R. Khan, O. A. Abdulquadric	
<b>34. Automatic Car Parking System</b>	<b>262</b>
M. J. E. Salami, Md. R. Khan and O. A. Abdulquadria	
<b>35. Anthropomorphic biped robot</b>	<b>267</b>
A. A. Shafie, M. F. Baharudin	

## CHAPTER 27

### Autonomous Goal Finding Robot

#### 27.1 Introduction

Autonomous goal finding mobile robot is a robot which can perform desired tasks in unstructured environments without continuous human guidance. The autonomous goal finding mobile robot has the characteristics of self learning which mean the ability of making decisions, having the capacity to act intelligently given only partial information and learning from their mistakes. The robot also will be able to learn about its environment to move about it with avoiding obstacle around in an intelligent manner to reach to the goal in the shortest possible path. Unlike other path planning or obstacle avoiding system which the goal is already determined and or the path to reach to the goal is already known [1-3]. This intelligent, learning system is intended to search for the goal, at its early stages, and then with sufficient time obtain the optimal path, minimum number of steps, to the goal [4].

Modern robotics engineers continually research the possibility to convert most of the devices that serves specific human purposes to “autonomous systems” so it will be more convenient and useful. Autonomous machines, in the present definition, are not only meant to be computational input-output devices, but it must have the capability to move around using their own motor modules and navigation systems guided by sensors, along with the ability of making decisions, having the capacity to act intelligently given only partial information (as minimum as possible), learning from their mistakes, adapting to heterogeneous and continuously changing environments [5-6]. Autonomous System Research (ASR) associated with Classic Artificial Intelligence is one of the most important current research fields. It is interested in “Intelligent Structuralism” to solve specific intelligence-related problems with pure structuralism intelligence techniques [7]. However, (ASR) is not the only field of robotics engineering that is currently being developed. Researchers of intelligent systems are trying to continuously develop and scientifically study the natural forms of the phenomenon “Intelligent Behavior”. In more explanatory words, they are trying to logically and mathematically simulate and develop a programmable coding to allow robots to behave intelligently (like interacting with its environment) or more in human form (like walking or even running) [8-9].

Direction is slightly more difficult, but could be solved with a compass or a beacon the robot could use to initialize its bearings to every time it came by its home point. From the start node, it could venture off in a direction until it encounters an object, then record the direction and approximate distance based on time of flight, or the distance and stored information on a memory. Then move back to its start point. The robot would repeat this many times, each time from its start point in a slightly new direction.

#### 27.2 The Development Process

Building up an autonomous robot is a complex task combining several technical disciplines like mechanical engineering, control engineering, electrical engineering, embedded systems
