Topics in Coding, Cryptography and Information Security

Contents

List of Contributors	ii
Editorial Introduction	vi

PART I: SOURCE CODING

1. Performance Analysis of Image Data Compression using Zero-Tree Wavelet Transform <i>Othman O. Khalifa, Emir Tabakovic, Zlatko Memisevic and Aisha-Hassan Abdullah</i>	2
2. Scalable and Robust Streaming Video System Challenges <i>Othman O. Khalifa, Sinzobakwira Issa and Mohammad Umar Siddiqi</i>	12

PART II: CHANNEL CODING

3. Golay Codec: An Overview <i>Othman O. Khalifa</i>	23
4. Reed-Muller Codes: An Overview <i>Othman O. Khalifa</i>	35
5. Viterbi Decoder: A Review and Implementation <i>Noorainani Ainina Bt. Md Noor Albakri and Othman O. Khalifa</i>	42

6.	Zigzag Codes: High Rate Low Complexity Iterative Codes <i>Sigit P.W. Jarot</i>	53
7.	Convolutional Coded OFDM in Broadband Mobile Communication <i>Sigit P.W. Jarot</i>	66
8.	Channel Coding Techniques in Mobile Communication Systems <i>Othman O. Khalifa and Rashid A. Saeed</i>	77
9.	Channel Coding in CDMA 2000 <i>Othman O. Khalifa</i>	85
10.	Channel Coding in Mobile WiMAX <i>Rashid A. Saeed and Othman O. Khalifa</i>	91
11.	Turbo Codes: An Error Correction Technique for 4G <i>Mosharraf Hussain Masud and Mohammad Umar Siddiqi</i>	99
12.	Combined Source Channel Decoding for Image Transmission over Noisy Channels <i>Jalel Chebil</i>	108

PART III: CRYPTOGRAPHY AND INFORMATION SECURITY

13.	Cryptographic Boolean Functions: Transform Domain Perspective <i>Hashum Mohamed Rafiq and Mohammad Umar Siddiqi</i>	120
14.	Implementation of RSA Algorithm <i>Hafizul Azizi Rasid, Mohd Azmi Jabar and Othman O. Khalifa</i>	141
15.	GSM Security: Problems and Solutions <i>Rashid A. Saeed and Othman O. Khalifa</i>	152
16.	Recent Approaches to Wireless Physical Layer Security <i>M. Tahir, Sigit P.W. Jarot and M.U. Siddiqi</i>	161
17.	Securing OFDM-based Systems from the Physical Layer <i>Sigit P.W. Jarot</i>	169
18.	Simulation of Artificial Noise based Physical Layer Security <i>Muhammad Izzat bin Zurkiple and Sigit Puspito Wigati Jarot</i>	174

19. Secure IPv6 Address Generation 183
Nashrul Hakiem, Mohammad Umar Siddiqi, and Sigit Puspito Wigati Jarot
20. Video Streaming and Encrypting Algorithms 190
Mohammed Abumuala, Othman O. Khalifa, and Aisha-Hassan A. Hashim
21. Wireless IP Camera based on Motion Detection Surveillance System 217
Zeeshan Shahid and Khaizuran Abdullah
22. Design of Mobile Phone Jammer 223
Fauzum Abdullah Asuhaimi, Nur Fatin Mohd Zakki, and Khaizuran Abdullah

Index

Chapter 21

Wireless IP Camera

Based on Motion Detection Surveillance System

Zeeshan Shahid and Khaizuran Abdullah

21.1. Introduction

Camera surveillance has been a popular security tool nowadays. The new breakthroughs in technology, security cameras are more effective than ever before. Banks, retail stores, and countless other end-users depend on the protection provided by video surveillance. While analog closed circuit television (CCTV) systems were once the norm, they can be expensive, requiring complicated installations and constant upkeep. Fortunately, advances in digital technology have made video surveillance systems far more cost-effective, flexible, and simple to operate. Security systems using IP (Internet Protocol) cameras are easy to install and maintain, and can be customized and scaled to perfectly match your specific needs.

Video surveillance has a number of benefits that are indispensable for today's society: it helps to prevent theft and vandalism of public and private places, prevent violence and crime, protect children and even improve customer image and trust on a particular vendor [1]. The aspects of video surveillance are pattern recognition, motion detection and tracking system [2].

Performance of the IP surveillance cameras is generally evaluated at encoding speed, video resolution, video frame bit rates and distortion, and power dissipation. Among these characteristics, the video resolution, the compression ratio and the frame rate are the most important to the users of the video surveillance systems because these features are highly related to the image quality and the network bandwidth. Moving Picture Experts Group (MJPEG) and MPEG4 Visual (Part 2 of the MPEG-4 group of standards) are the common standards used for image compression. However, both the MJPEG and the MPEG4 visual encoders are not efficient enough in terms of the compression ratio and image quality [3].

The availability and cost of high resolution surveillance camera, along with the growing need for remote controlled security, has been a major driving force in this field. A growing amount of information increases the demand on processing and tagging this information for subsequent rapid retrieval. To satisfy this demand, many researchers are working to find improvements and better solutions in video analytics, which is the semantic analysis of video data, to reduce running time and total cost of surveillance systems [4].

The advent of high resolution digital IP surveillance cameras, connected via the internet to a remote security monitoring station, enables a new approach that
